What are you trying to remove the ribbon cables from, David? Usually just a small pair of needle nose pliers or grasp the connector and gently pull straight up? Check to see if there are any clips holding it in place.

Thanks for the great articles, Paul. This is going to be interesting.

I did a little probing with a homebrew sniffer coil and learned that most of the noise is coming from the ignition wires and coils. The Tundra engine uses an unusual system of an electronic distributor and eight individual coils each mounted directly to a spark plug. There are no spark plug wires, but the primary wires going to the coils are radiating.

The wires are all bunched together into one big harness for all the motor sensors, etc.. Maybe I can separate the ignition wires from the harness and shield them. I'm wondering if aluminum heater tape(duct tape) would work for shielding of the wires.

I was in the "high end" car stereo buis. for quite a few years. And noises in cars can affect stereos as much or more than Two Way Radios.
Here is a cheap, quick tool for sniffing out electrical and RFI noise in a car.
Take a small cheap "walkman" type cassette player and remove the tape head, extend the tape head wires with a long shielded wire (about 4 feet works good) and reconnect the tape head at the other end of the wire. Put on the head phones, turn up the volume, and push play.
The tape head makes a Great sniffer! It is good to put a couple layers of shrink tube at the end with the tape head to act as a handle. You can buy those tape players new for $5 to $10, or at Garage sales for Pennies!
Good luck!

Dick (WB0DUL); I am venturing into the AM mod procedures. Using the highly technical and well illustrated manual provided by Yaesu, I am figuring out the procedure to install the xf-117a filter. I don't want to go yanking on a bunch of cables and mess up the goodies. As Jim AD6DW mentioned, one must be careful and I'm not familiar with these tiny connectors.

Everyone talks about the connector clips,
but no-one mentions the green wire left over
when all the clips are separated. I had to cut
it to turn the board enough to get at the underside.
I soldered it back together, and shrink-wrapped it.
(don't forget to put the shrink wrap on first before
soldering, and move it far enough away to avoid
heating.)

From: John L. Gianotti
Topic: 13914  Message: 13914

I had a vertical (HyGain) on the roof of my garage (15 feet up) for a number of years. For radials I did the following:

1) Go to Radio Shark and purchase some flat rotor cable - 4 or 6 conductor whatever.
2) Measure 4 pieces of rotor cable the length needed for the longest radial (in my case 40 meters) you now have 4 pieces of rotor cable of equal length.
3) Take each piece of rotor cable (let's assume it was 4 conductor to start) and cut 3 of the conductors back to the next longest length (say for 20 meters). You now have one long wire and 3 shorter ones in each piece.
4) Now cut 2 conductors for the next longest length (15 meters).
5) Cut the remaining conductor for the next longest length (10 meters).

What you end up with is a cable of 4 conductors, each one cut for a different length of radial.
Spread these out on the roof (since I have 4 sets, I seperated them by 90 degrees) and enjoy. I used the FLAT rotor cable as it was easy to work with, cheap, etc. Worked great with the vertical on the roof.

Hope this idea helps. CUL and good DX.

John, only one problem with the way you did it. Radio Shark doesn't sell 5 conductor rotor cable anymore. I think 3 is all you can get. I got the last 2 100' coils of 5 conductor that existed in Colorado Springs. Paid $3 each for them, so it was a great bargain. Had I been able to mount my 4BTV on the roof I would have done exactly as you suggested.

# 13918. ATAS IN-OP

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-05 19:53:49 UTC
From: k0dlw
Topic: 13918  Message: 13918

I own the FT-847 and have used it mobile for the last two years with great success with the ATAS.
Well this summer I decided to purchase the FT-100d to use as my mobile rig instead, when I installed it I could not get the ATAS to tune, I checked all my ground straps and all connections. I was stumped at this point, even reread the manual!! I use the Comet 3D5MC mount and cable and have it mounted on an aluminum faring mounted behind the cab of my 4 door pickup truck (didn't want to drill holes in cab so built faring for antenna mounting)After rechecking all connections decided as a last ditch attempt to remove the 3D5MC mount and found that it had corroded between it's self and the aluminum faring. after cleaning up mount all works great.
Moral of the story......ground....ground...ground...when the ATAS doesn't want to work check ALL GROUNDS!!....KØDLW

>k0dar
>---------------

Thx to all who replied on this subject; Ed's reply below occurred
just as I was dorking around and figured out the secret:

I just saw your posting and a few replies, and am not sure the "clip"
business was really clear. The upper part of the pc board receptacle forms a
rectangular "collar" around the cable and snaps around the fixed part of the
connector. You pull this up to release the cable, push it back down and it
clamps the cable. It only moves a little bit, but it has quite a gripping
action.
Hope this helps - and is not too late.
73,
Ed, K1GGI

This type of connector is a push to lock and pull to release cam type
that smashes the ribbon to the connections. There is a special tool
to pull up the connector top which I, of course, don't have. The two
key shaped holes take the tool, which then is pulled up about 1/8
inch to release the ribbon. I had some small safety wire, about #22,
that I formed into a loop, with the ends bend 90 degrees (1/16").
Hook the ends in the key holes and pull up; the connector will snap
open and the ribbon can be easily pulled out. Closing is accomplished
by simultaneously pushing key hole ends down while holding ribbon
cable firmly seated.

QED
Thus endeth the lesson
David in Denver

One other problem, minor
though. The rotor cable
deteriorates after a few years
from the sun/weathering. The
covering will flake off.
It's mostly an esthetic thing.
;-)

If you use copperweld
it won't.

Thanks for all the great input on my RFI problem. I personally don't see how crying to the dealer is going to help me. I've installed an aftermarket radio transceiver with one of the most sensitive receivers available and I find it picks up noise from the engine. By nature, all spark ignition engines produce some RFI unless steps are taken to suppress it. To insist that a car manufacturer shield the RFI completely just to appease the less then 1% of the population who might install a ham radio is absurd. The vehicle functions perfectly otherwise. I just can't consider this a dealer or warranty issue.

Besides, I feel that my time will be better spent, and I'll be more likely to find a solution, by researching the problem and taking steps to correct it myself. Plus, I just might learn something in the process.

I will, however, call the dealer on Mon. to see if they have any TSB's on the issue.

Pres, I too would be interested to hear if, in your experience, You have ever gotten a satisfactory resolution to a ham radio RFI problem by complaining to the factory. Or was it just a waste of time and breath as I suspect.

Looks like I'm going to delve into the ARRL RFI book and see what I can learn there.

Thanks again to all who replied.

Dave KG6GZY; here is a link that should keep u bzy for a month or so:

http://www.arrl.org/tis/info/rficar.html

I think there's an article on an four runner (toyota) that the owner
really did a super job. My experience in this area finds that if u
mess with input shielding, one could disrupt the timing to/from the
ECU. I personally am going to try some ferrite rings on certain
leads, which ones I've not identified yet.

I have done real shielding on an older vehicle ( 1953 pontiac) and
achieved great success( Standard kettering point and coil ignition).
I used a coffee can on the distributor, rg8 braid on the spark leads,
etc. The attempt to filter the point leads lead to really bad idle
problems (feed thru caps). Ferrites were not around at this time
(1964). The rig was a mobile HeathKit, and worked great. My first
contact was WH6 in Hawaii.

However, with the newer ignition systems, one is not to sure what
needs to be done to reduce RFI and still keep the darn car running. A
fun exercise in electronics, eh?

# 13923. Ignition noise in vehicles

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-05 22:57:04 UTC
From: ve7baq
Topic: 13923  Message: 13923

There have been quite a few posts lately regarding ignition and other noise in present day mobile operation. With the advent of solid state this and that in the modern vehicle this will pose many problems. Noise has been a plague ever since hams began installing their rigs in cars, boats, and trucks. Years ago I installed a tube type transceiver in a 1959 Mercury truck and had a lot of noise. I installed braid over all the high tension leads, put a capacitor to ground from the battery side of the ignition coil (remember those coil and point ignition systems?) I think I even installed resister spark plugs. The noise went down a little bit but was still very bothersome. The charging system was a generator and the noise from it was easy to cure. (By the way if your noise is a whine that changes with engine speed it most likely is the alternator). I also grounded the exhaust system and installed bonding cable on both sides of the hood to the body. The frame was also bonded to the body. Now I said the noise should be gone! Ha! Not so! Spark ignition noise like you wont believe! My antenna was mounted in front on top of the spare tire bumper mount, nice and high and hardly noticeable to a ham. The XYL didn't agree but we compromise quite a bit, and after nearly fifty years of marriage still get along pretty good. But back to the transceiver installation. The noise was really bad so in desperation, I connected a short length of braid cable to the front of the hood, connected an alligator clip to the other end and clipped this to the base of the ant. mount. The noise is gone! Took all the shield braid off the ignition wires, left the capacitor on the battery side of the coil and went mobile. Just had to remember to reconnect it when checking the oil etc. Sometimes you will have to try the unorthodox methods. It is not all cut and dried or written in the books yet!

From: backhoefade
Topic: 13886  Message: 13925

I published some information regarding lightning protection that takes into consideration the fast rise time of strike related events and the consequential voltage rise that occurs as a result of the physics of the whole situation. I suggest that you consider the inductance of the path and make the appropriate changes or improvements. Remember that one meter of 6 guage wire has roughly 1 microHenry of of inductance and the typical strike rise-time is about 3 nanoseconds, so go figure. Answer: keep it short and keep it wide. Does that make any sense to you?? Hello - test - one two

> Mike,
> Don't waste your time and energy miving the vertical to the roof. You would do so much better by adding some ground radials to your existing installation. Even if you have a small lot and can only put out radials 20 or 30 feet long and can put say 20 to 50 of them you will see a super performance increase and you will not need the tuner. Radials are easy to install. Use any copper wire, insulated, bare, #10, #18, it doesn't matter. As you run the wire away from the antenna use 20D galvanized nails every 2 or 3 feet and wrap the wire one turn around the nail and pushit into the ground. If you are using heavy wire then you can use landscape staples (any garden or hdwr store.) They are just a wire "U". once the wires are laid out and down you will be able to run the lawn mower over them with no problem. In a few months the grass will absorb the wire and the XYL won't even know they are there.
>
> A vertical is a high angle radiator and best when ground mounted. If you do raise it, 10 to15 ft is high enough and you will only need 4 radials **per band**. That's 24 in your case and they must be resonant. (not good XYL appeal) On the ground, however, they need not be resonant but longer is better. Uniform lenght is better than long and short ones. When you reach the property line or house you can just bend them and follow the obstacle. The idea here is you are creating a return path for your RF. RF ground is different than electrical ground. The latter requires deep ground rods, RF requires long surface area.
>
> I have used verticals for many years in defferent sittuations and they play well provided you have a good RF ground system. I had full size 80m vertical until a storm took out a tree the took ot the antenna. I am using a Butterut HF6V in the same location using the 38 radials (x 50 ft.) from the previous antenna.

Yes, send it in. Request two things:
1) modification for the spurious oscillation (the so-called "SWR icon" problem).
2) modification for the VHF/UHF fan mod.

That's it! Once you get the rig back it's perfect.
Enjoy!

This is wierd - almost like a cult. My wife didn't leave me but it truely will be a "hard sell" to convince her to ever buy a "new" radio from any company. To put it in real, practical, terms, Yaesu can go to Heck. This has been an example of what precisely not to do. It smells very bad and that is that. Go away Yaesu. We wish that you didn't exist. You suck!!!!!!!
N6AF Charles

How dare you sell me an object that clearly had well known design defficiencies!? I'm serious, you gotta be nuts. For me to have to defend your half-As- operation to my wife is unforgivable.

Yaesu equals bad design and bad business practice. You will be reported and your sales in America will subside. You lose because you lied. That behavior is inappropriate in a time when excellent products are expected.

How on earth could you do this? Seriously - get a clue - that is the most stupid way to run a company. Yaesu - you are on the carpet. I want an explaination. Be specific regarding you decision criteria regarding your decision to not declare that you had a design deficiency and your obvious decision to handle the wide-spread design problem on an individual basis.

Yes at least in my town you can. It comes in 100 foot rolls and some dealers even stock it in 6 or 8 conductors, depending on application.

Bob,

If you have enough money, you can buy anything you want. Go to an RV dealer/service facility and tell them what you want. It probably won't be cheap, but worth a try.

Also, call your local Radio Shack stores and ask them if they have any 5 wire rotor cable in stock. I was told that there wasn't any to be found here in Colo Springs, but after dinner in a restaurant one evening, I stopped at a RS store and the kid said "We have 2 spools od 100' each left. The price is $6 per 100'." I told him I'd take them both. When he rung up the sale, it came to $6.00 plus tax. He said he guessed they lowered the price even further.

Happy hunting.

None. Zippo. They sent a field engineer out who "hmmed" a lot. Said there is no problem since the noise is below 30MHz. I showed him it extends to above 500MHz!!! Some more "hmm"ing and a promise to get back to me. 2 years ago.

This is why I urge every ham to get an audience with their local field engineer. If we ALL gang up on them and waste enough of their time they may, just may, get a hint at the factory that this is unacceptable.

One beam? Wimp? For chrisakes, Chas, I had a stack of TH7's, and a 40m beam, and a full sized 1/4 wave 80m vertical as well. (Funnel clouds. Another story for another time.) The vertical is not a compromise antenna but another tool in the toolbox. If you can't get a 80m dipole up 150 ft. then a full size 1/4 wave vertical will be your best weapon for DX. If you have both then you have options for the conditions at the time. The vertical is not a compromise but people make it a compromise. They think that you can do it in limited space, however, the opposite is true. To "properly" install a vertical you need a plot of land and need to clear it out of trees and then burry a ton of long wire. On low bands, because of size, the vertical is the most logical choice for most guys. Large gain type yagis up high are the best choice for the higher frequencies, 10-15-20m. Everybody has to work with what they have and not everybody has a 30 acre antenna field.
Every time, and I mean every time, that I hear an antenna discussion the first question that should be asked is "where do you want to communicate with?". The "best" antenna will be the one that puts your signal where you want it. Take a look at the antenna field at Ft. Bragg and you can see that they are set up to put a signal anywhere they want to. If I had their budget I could do that too.

Dude, are you getting too much into the Cinqo d' Mayo party? College grades, real estate, calling ops wimps. Chill. It's only a freaking hobby.

I was in the "high end" car stereo buis. for quite a few years. And noises in cars can affect stereos as much or more than Two Way Radios.
Here is a cheap, quick tool for sniffing out electrical and RFI noise in a car.
Take a small cheap "walkman" type cassette player and remove the tape head, extend the tape head wires with a long shielded wire (about 4 feet works good) and reconnect the tape head at the other end of the wire. Put on the

Cool. This is interesting. Of course, those of us with FT-100 or other HF radios can also accomplish the same with an 18' piece of coax and one PL-259 on the end, the other is stripped and left unshielded a few inches.

BTW in my 2002 Mustang I have REVERSE RFI... the broadcast radio trashes some areas of 10m and 6 and VHF-lo as far as I can tell... sheesh. This is enough to consider rebuilding the remote base.

Thanks

Hmmmm ??????? Good answer but it won't work.
The FT-100D is a great rig. The receiver is excellent. I was just spouting off about they handled the whole situation.
Would I buy another Yaesu radio - you betcha! in a heartbeat. Let's be reasonable - they have the best receiving system on the planet!
No question about it.

Just trying to stir up some discussion. Guess it worked.
I was most impressed by the antenna farm at Marshall and Bodega Bay.
That was really neat. I mean just super. Really interesting stuff.
The patterns that were developed by those systems were outstanding.
Fortunately my wife has some appreciation for that. She says, for
example, "Hey - those towers look pretty nice". Coming from a wife
that's not an engineer, that's very nice.
Take care es 73 Chas N6AF

--- In FT100@y..., "Norm, W3IZ" <w3iz@c...> wrote:
> One beam? Wimp? For chrisakes, Chas, I had a stack of TH7's, and
a 40m beam, and a full sized 1/4 wave 80m vertical as well. (Funnel
clouds. Another story for another time.) The vertical is not a
compromise antenna but another tool in the toolbox. If you can't get
a 80m dipole up 150 ft. then a full size 1/4 wave vertical will be
your best weapon for DX. If you have both then you have options for
the conditions at the time. The vertical is not a compromise but
people make it a compromise. They think that you can do it in
limited space, however, the opposite is true. To "properly" install
a vertical you need a plot of land and need to clear it out of trees
and then burry a ton of long wire. On low bands, because of size,
the vertical is the most logical choice for most guys. Large gain
type yagis up high are the best choice for the higher frequencies, 10-
15-20m. Everybody has to work with what they have and not everybody
has a 30 acre antenna field.
> Every time, and I mean every time, that I hear an antenna
discussion the first question that should be asked is "where do you
want to communicate with?". The "best" antenna will be the one that
puts your signal where you want it. Take a look at the antenna field
at Ft. Bragg and you can see that they are set up to put a signal
anywhere they want to. If I had their budget I could do that too.

# 13940. ATAS Tuning Problem

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-06 02:58:18 UTC
From: wd5dbc
Topic: 13940  Message: 13940

Hi

I searched the FAQs for my problem and did not find it.

I just installed my FT100 and ATAS100 in my car. I set the 100 to 14.323 pressed the tune button, and the antenna extended. Neat.

Next I tried 7.255, pressed tune and the antenna extended more. Neat!

Next I tried 14., pressed tune, nothing happened. I tried the manual tune, using the front panel up/down. Nothing happened.

I am using the ATAS100 connected only to the HF/50 pigtail, no vhf/uhf antenna and the menu setting set to ATAS-1.

Any suggestions or trouble shooting hints?

That reminds me, at Dayton a few years
back I remember talking to a factory
rep for I think GM. He said that there were
"White Papers" for Transceiver installation
for each specific model. They use them
for I believe government factory installs.

Maybe a request for such a reference from
the manufacture?

A beam for 80 meters?
(heh)

Why not put up the
B&W 1.8 - 30MHz Folded dipole?
http://www.bwantennas.com/eng/fdipole.eng.htm

Mine's 30 feet up at the ends,
50 feet up, on the tower, center,
for an inverted-V with omni coverage,
and low noise to boot.

90 feet long, roughly 2 feet wide,
balanced coverage between
1.8 - 30 with less than 2 to 1 swr,
NO tuner. Handles from 2K to
whatever you need, special order. The
military, and embassies have a ton of
them.

Tim. Where can I get one of those antenna's. Did you say that the gov. surplus stores might handle them. I have an inverted V that works great " home made" but that one you are referring to sounds good. If you know where I might get in touch with one of those things, let me know please. Thanks and 73 de AD6DW Jim

The Green Wire must be an "upgrade" in the FT100D,
I did not need to do that in my FT-100 (actually did it
on two FT-100's).

Everyone talks about the connector clips,
but no-one mentions the green wire left over
when all the clips are separated. I had to cut
it to turn the board enough to get at the underside.
I soldered it back together, and shrink-wrapped it.
(don't forget to put the shrink wrap on first before
soldering, and move it far enough away to avoid
heating.)

How helpful are the two ARRL publications:

"Your Mobile Companion" and
"ARRL RFI Book"

If these are "must haves" or "nice to haves" or "There's a better source elsewhere" I'd be curious feedback from this highly knowledgeable group.

Thanks,
KG6DHE PJK

# 13949. Protecting the FT-100 from starter transients

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-06 04:19:54 UTC
From: pjkl3
Topic: 13949  Message: 13949

Snippets of this topic have been discussed here in the past. From what I can remember, these are the recommendations:

1) Pi Filter in the power lines. Anybody done a work-up on what values to use?
2) 15v MOV (Transorb) in parallel with the power lines. Anybody have a part number/source?
3) LF-100 series inductor from Powerex.

Any other suggestions? I've been religous about turning off the FT-100 before starting the car, but I don't want to depend on just habit.

thanks,
KG6DHE PJK

I suspect it's a mod of some sort.
It sure looks the part. Not like
all the other connections, just
strung across compartments. It's
just a piece of hookup wire really.

Anyone have any ideas what it's
there for?

In a previous life, I used to be a frequent user of a repeater on 147.015MHz. The squelch on every radio I used would open occasionally while sitting in traffic. Invariably, I'd look at the cars around me and identify a late model Chrysler product ahead of me, behind me, or in an adjacent lane. As soon as I got away from the suspect Mopar, the squelch would close.

For three years straight, I stopped by the Chrysler booth at the Dayton Hamvention and filled out their survey indicating that I had a problem with their vehicles emitting interference on that frequency. I never expected a response...and I never got one. Maybe they incorporated a fix on newer models.

Bob...

# 13955. Automobile EMC

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-06 13:34:59 UTC
From: lhlousek
Topic: 13955  Message: 13955

Hi Dave,

You may not think it is the car manufacturers responsponsibiliy to reduce or eliminate RFI but some manufacturers do
feel it is their responsibility. Here's the link to Fo Mo Co's statement on the subject.

http://www.fordemc.com/

I agree that crying to the manufacturer probably won't accomplish much in the near term but maybe if they get enough
complaints maybe they will give it more consideration in future products.

Hi Tim;

Funny you should say I could just go to Polyphaser.com. Polyphasor are about 30 miles down the road from me and I
interviewed for a job there a few years ago. (it wasn't a good fit). I am well familiar with their website. However, my
question was who posted the braid vs strap measurements on the FT100 list and what where those measurements. Do you
happen you happen to know?

It's amazing some of the stuff that Home depot sells. In some respects it might be a ham's dream. I bought an 8' copper clad ground rod from the for about $8. Radio Shark wanted $20.

I am eagerly reviewing the site, and a hearty Thank You goes to Lou for finding it.

But before everyone gets all damp remember that the site and its information within are mostly geared for how to prevent YOUR radio transmitter from damaging or disrupting THEIR vehicles. Again, I am posting this very early, but do not be disappointed if there is a lack of solutions or even acknowledgement about THEIR generation of RF disrupting the receivers installed in the vehicles.

My, oh my, would I love to be wrong on this!

# 13964. Verticals

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-06 12:01:43 UTC
From: Wayne Blanton
Topic: 13964  Message: 13964

The thing about verticals is that they operate equally poorly in all directions. I have used many and that has been my experience. I now have a Butternut 80/40 ground mounted that I put up to work low angle DX but my Carolina Windom consistently works better, I will be selling the vertical at the next hamfest.

I know a number of stations who have had great success on the lower bands with verticals but they also have very good ground systems. A typical broadcast station uses 120 radials, one every three degrees.

I'd be interested in knowing your ground system.

...and without taking us too far down a rathole, comparing verticals that require a ground plane (like the Butternut) versus those that don't (like the R6/7/8, Gap Titan, Force12). I have had much better performance (even at QRP levels) with those that don't.

Get a few audio reports first, I dont know if the euro mics have
the same trouble (Euro owners chime in now!). You can always order a
USA version mic and perform the mods to it if you are not happy with
the NON-DTMF euro mic or try modding the existing mic.. Regards..

Hi Dick!
Sorry for late answer !! i was busy in the job

I was completely wrong, I mixed up the serial nr.. It starts with 1N so
I think this unit must be produced in November 2001???
The box has a green dot on it I don□t know what this means, but I can
only tell you that the fans are running constantly.. so I think yaesu
has done already the fan mod

I have a MH-42b microphone and It works great. Got some real good
reports today on 10m

Betreff: Re: [FT100] NEW TO THE FORUM

Welcome to the forum, Chris. Nice to have you aboard. Your manufacture
date is the newest I've seen on here. The serial number must start with
2C. Right?

I don't know whether anyone can really say for sure if the mods have
been done on your new 100D. Do the fans run continually on VHF/UHF like
they do on HF (when receiving)? If they do, then at least the fan mod
has been done on yours. Also, mention has been made of a Blue dot on
the label or box. Do you see anything like that?

Let us know.

73,

Dick

Just to say hello from Austria to all members connected to this fine
forum...

I joined a few days ago, when I received my FT100D from the german
dealer....

Took me 8!!! Weeks to wait for it...But I am happy to have a unit of
the
latest production series... The serial nr. Production date January
2002!!!
So I guess all the mods have been done??!! Anybody who can confirm
this??

Anyway it's a great little rig, and I really like it much even if I am
only using it now for 2-3 days :-)))

BTW thanks for this forum, I have got some real good infos about the
FT100... I had to decide between IC706MKIIG and FT100D... Finally I
think I have done the right thing!!!

Greetings from Austria (NOT Australia, we have high mountains but NO
kangaroos.... )

Chris

# 13970. Low output on SSB....??!!

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-06 19:28:36 UTC
From: 35IR184/35SD184/35LD184
Topic: 13970  Message: 13970

Can anyone give me some hints how to increase the output power on my FT100D to exactly 100W????
I figured out on 10m that the output is only about 70W Talkpower on my MFJ-Wattmeter...(not when whistling! Or on FM!)
Although I have set up everything (proc, Micgain, output power...) and the SWR is adjusted properly on the ant....

Any ideas would be welcome!!

73´s Chris OE5CSP

# 13971. Re: Low output on SSB....??!!

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-06 20:27:12 UTC
From: backhoefade
Topic: 13970  Message: 13971

There are several output power controls within the secondary "F" menu; separate controls for HF, 6 meters, VHF and UHF. Let's talk about HF. First go to menu item 21 and set it to 100. Then access the "F" menu by shutting off the rig and then holding in buttons A, B and C while turning on the rig. After powering up like that, go into the function menu and scroll past the last item (somewhere in the 60's). Now you'll find yourself in the "F" functions. For setting the HF power you use F15. I don't recommend doing this unless you have an accurate power meter and you should only adjust this using a dummy load. That's your safest bet since the rig will start folding its output power back when the SWR is around 2 to 1 and that could mislead you. You set F15 in the CW mode for 100 Watts average output power. When you switch over to SSB you will have 100 Watts PEP output. Just remember to always set F15 in the CW mode with a dead key carrier.

If you're planning to run AM you will want to set menu item 21 to "100" and then go into the F functions and set F51 (that's fifty one) to the point where the un-modulated output power is precisely 25 Watts. First set your mic gain to 17 or, if you want to use the processor, set the level "within" the PRO control also to 17. Contrary to the description in the User's Manual, you cannot adjust the compression percentage. I confirmed this with an oscilloscope. The setting "within" the PRO button is simply an alternate MIC gain control which over-rides the standard MIC gain setting whenever you use the PROcessor. You can convince yourself of that by turning on the PRO and then turning the MIC gain all the way to zero. Then prove to yourself that the output power varies only as a function of the setting of the level control within the PRO button.

Don't bother trying to run AM until you install the 6 kHz filter. You need it to have proper AM operation since the rig will attempt to use the 2.4 kHz SSB in the absence of the 6 kHz filter, and that will attenuate one of the AM sidebands and also suppress the carrier power output leading to terrible sounding modulation. Once you get that filter in there and set it up right though, you will receive very good audio reports. Good luck.
N6AF Chas

I agree with Bill. I had a GAP (which I unfortunately sold) and now have a
Cushcraft R7000. There is really no comparison.
My GAP worked great on the low bands. My Cushcraft... well, let's say "so-so".
Of course, the GAP required rope guying (you can do w/o it IF you live in a
"non-windy area", but do you know of any in North America?) and the R7000 doesn't. So it's a compromise, like many antennas are.

...and without taking us too far down a rathole, comparing verticals that require a ground plane (like the Butternut) versus those that don't (like the R6/7/8, Gap Titan, Force12). I have had much better performance (even at QRP levels) with those that don't.

One of the best antennas I've ever used on 40 meters was a full wave loop. It was 148 feet of wire in a rectangular outline. The plane of the thing was vertical and the broadsides faced pretty much East / West. Based in the SF area, that antenna pulled in the East coast and Japan incredibly well. I was running QRP with a couple Watts and so of course the antenna was very critical. I received multiple S9 reports with my two Watts both on the East coast and in Japan. The best bet would be a 3 element Yagi up 105 feet or so. But in my case I would have to negotiate for land with at least one of my neighbors with a beam like that (not to mention the XYL). So the full wave loop offered a couple dB of gain over a dipole. It sure seemed like more than a couple dB though. That antenna was amazing.

# 13974. Re: Low output on SSB....??!!

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-07 00:01:04 UTC
From: Bob Evans
Topic: 13970  Message: 13974

Chris,

Hold on a second partner, don't change a thing!! You implied that you get 100W out when whistling or on FM. Well, guess what, that means your rig is putting out 100W "exactly". The reason your meter is showing 70W is because of the meter; I'll bet it is not a peak reading meter. If you jack up the power level any further than it already is, you run a greater probability of burning up your finals no matter how many fan mods you do. I'd just leave the FT-100 alone and get a new wattmeter with a peak reading feature.

Good luck,
Bob K5WA

Subject: Low output on SSB....??!!

Can anyone give me some hints how to increase the output power on my FT100D to exactly 100W????
I figured out on 10m that the output is only about 70W Talkpower on my MFJ-Wattmeter...(not when whistling! Or on FM!)
Although I have set up everything (proc, Micgain, output power...) and the SWR is adjusted properly on the ant....

Any ideas would be welcome!!

Topic: 13791  Message: 13975

Hi Chris,

If your serial number starts with 1N, then the radio was manufactured in December 2001. Yaesu starts with a C for January. So N would be December. That's the latest one I've heard about. It sounds like the fan mod at least has been done. That's a good deal.

I'm not sure how you tell if the SWR mod has been done. Someone said a blue dot (or green) on the box indicated the mod(s) had been made to the radio.

As for the power output, check it in CW mode. Don't count on a full 100 watts in all modes.

73,

Dick

Hi Dick!
Sorry for late answer !! i was busy in the job.

I was completely wrong, I mixed up the serial nr.. It starts with 1N so I think this unit must be produced in November 2001???
The box has a green dot on it. I don't know what this means, but I can only tell you that the fans are running constantly.. so I think yaesu has done already the fan mod.

I have a MH-42b microphone and It works great. Got some real good reports today on 10m

Betreff: Re: [FT100] NEW TO THE FORUM

Welcome to the forum, Chris. Nice to have you aboard. Your manufacture date is the newest I've seen on here. The serial number must start with 2C. Right?

I don't know whether anyone can really say for sure if the mods have been done on your new 100D. Do the fans run continually on VHF/UHF like they do on HF (when receiving)? If they do, then at least the fan mod

has been done on yours. Also, mention has been made of a Blue dot on the label or box. Do you see anything like that?

Let us know.

Just to say hello from Austria to all members connected to this fine forum...

I joined a few days ago, when I received my FT100D from the german dealer....
Took me 8!!! Weeks to wait for it...But I am happy to have a unit of the
latest production series... The serial nr. Production date January 2002!!!
So I guess all the mods have been done??!! Anybody who can confirm this??

Anyway it's a great little rig, and I really like it much even if I am only using it now for 2-3 days :-)))

BTW thanks for this forum, I have got some real good infos about the FT100... I had to decide between IC706MKIIG and FT100D... Finally I think I have done the right thing!!!

Greetings from Austria (NOT Australia, we have high mountains but NO kangaroos.... )

Chris

Oh sure, anything not a multi element
Yagi is crap eh?

Bluntly, the antenna does exactly what it says it does.
It is easy to put up, take down, and mount in many
configurations. It handles full legal power, and for
those in the military, lots more power, as necessary.

My own tests confirm the wide coverage, with actual
gain on the upper bands. For what it does, it works
just fine.

It will also survive conditions that would take out most
other verticals, or beams.

Hardly an antenna design deserving of such an
inaccurate, un-usefull term like "crap".

A long time ago, in a state far, far away, I had a vertical in the front yard of my parent's home.

My dad came up with an idea for burying the radials: Use a small hatchet to make a slit in the sod and use a wooden dowel into which you have cut a "V" shape in one end to push the radial into the slit. This gets the wire below ground so there are no worries about anyone tripping over them or winding them around the lawn mower.

The antenna has long since come down and the house sold, but I bet those radials are still there!

May the Force be with you,

Turner - WA4MQY

I suspect it's a mod of some sort.
It sure looks the part. Not like
all the other connections, just
strung across compartments. It's
just a piece of hookup wire really.

Anyone have any ideas what it's
there for?

Tim

I don't know specifically about the Butternut, but my old Cush-Craft trap vertical and a homebrew wire vertical I made worked MUCH MUCH better when elevated with 4 elevated radials per band. Some signals are stronger on my Zepp, but 75% of the DX is stronger on the vertical.

Yes, but its location at the ends of each
leg, joining them is not where the current
is flowing. There are two "barrels", one
of which is a 4 to1 ballun. This of course
is where you attach the coax. It also why
the antenna radiates equally (Balanced).
The other "barrel," the horizontal one,
does contain a resistor, however it is used
to join the ends loop style. It contributes to
the wide frequency coverage, and does not
absorb transmitter energy enough to really
matter.

As to that vertical, unless you have a tuned
radial, or multiple radiator, you won't be
using much of your transmitters power
effectively...
then of course there is your bandwidth.

I suppose you could put up a 45 foot
vertical, with a tuned 45 foot radial, on a
90 foot long pole, with a decent tuner to
maintain a decent match. Of course the
tuner would require power, and a
weatherproof enclosure, and I am sure
those memory equipped, auto tuning
units like SGC cost quite a bit...
probably twice what a B&W costs.

You could do that...
but I wouldn't.

Tim,
Don't get your feathers in an ruffle. The B & W dipole has a big terminating resistor at the top of the dipole making it a 50 ohm resistive load which is what a dummy load is. That is why you get wide bandwidth SWR. So John's comments are descriptive and truthful.
If you understand the fundamentals of antennas you would know that a dipole cannot cover the entire HF band with a flat SWR. And if the military wants to run more power then they put in a larger resistor. Most of the power is being spent as **heat**. Try this experiment, load your 100 watt xmtr into a cantenna or other dummy load outside and have a friend listen for your signal. Or if you have a MFJ antenna analizer put a small sniffer antenna wire on it and put it in freq counter mode and you will see that your signal will still radiate from the DL. Now put 100 feet of wire on the hot side of the DL and you just gave the little RF that is not heat energy a "springboard".
Use the formula for quality factor, "Q" and youcan see that ANY LC circuit with a wide bandwidth is low Q.
Q = Fr / BW
Example If you cut a dipole for 14.150 Mhz and it has a 2:1 SWR bandwidt of 200 KHz then Q=14.150/.200=70.75. pretty high Q. Now if you have an antenna that you cut for 3.5Mhz and it covers a bandwidth of 26.5 MHz (30 - 3.5) then the Q would be 3.5/26.5=0.13.
Seventy or point one three. Obviously the wide bandwidth is the low Q. Does it work? Jed Clampet's truck worked but not efficiently.
I will ammend my comment and say The B & W design is a very inefficient method of radiating RF.

And what do you put at the end of the FT-100? The antenna is the most important part of the station.

# 13988. how i get fm mode to work

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-07 19:05:33 UTC
From: kb9umbb
Topic: 13988  Message: 13988

I was having trouble with the fm mode. I was getting signals but no audio output. I powered down the radio in that mode then fired it back up, guess what, now have fm mode. I guess I should send it back to yaesu but I just got it. No fun buying a radio and having to send it in for repairs!
Anyone have any ideas of the cause?

# 13989. Mic Ft100

Hi Dick!
TNX for answer and info.
I solved the problem with the low output on SSB (menue F15 is the way to go!!)

And you are absolutely right! The box of the FT had a GREEN dot on it. So you think the mods have been done lately??!

Anyway I am really happy with my new transceiver and that□s the most important thing

Greetings from Chris OE5CSP

Betreff: Re: [FT100] NEW TO THE FORUM

Hi Chris,

If your serial number starts with 1N, then the radio was manufactured in December 2001. Yaesu starts with a C for January. So N would be December. That's the latest one I've heard about. It sounds like the fan mod at least has been done. That's a good deal.

I'm not sure how you tell if the SWR mod has been done. Someone said a blue dot (or green) on the box indicated the mod(s) had been made to the radio.

As for the power output, check it in CW mode. Don't count on a full 100 watts in all modes.

73,

Dick

Hi Dick!
Sorry for late answer !! i was busy in the job.

I was completely wrong, I mixed up the serial nr.. It starts with 1N so

I think this unit must be produced in November 2001???
The box has a green dot on it. I don't know what this means, but I can only tell you that the fans are running constantly.. so I think yaesu has done already the fan mod.

I have a MH-42b microphone and It works great. Got some real good reports today on 10m

Betreff: Re: [FT100] NEW TO THE FORUM

Welcome to the forum, Chris. Nice to have you aboard. Your manufacture
date is the newest I've seen on here. The serial number must start with
2C. Right?

I don't know whether anyone can really say for sure if the mods have been done on your new 100D. Do the fans run continually on VHF/UHF like
they do on HF (when receiving)? If they do, then at least the fan mod has been done on yours. Also, mention has been made of a Blue dot on the label or box. Do you see anything like that?

Let us know.

73,

Dick

Just to say hello from Austria to all members connected to this fine forum...

I joined a few days ago, when I received my FT100D from the german dealer....
Took me 8!!! Weeks to wait for it...But I am happy to have a unit of the
latest production series... The serial nr. Production date January 2002!!!
So I guess all the mods have been done??!! Anybody who can confirm this??

Anyway it's a great little rig, and I really like it much even if I
am
only using it now for 2-3 days :-)))

BTW thanks for this forum, I have got some real good infos about the
FT100... I had to decide between IC706MKIIG and FT100D... Finally I
think I have done the right thing!!!

Greetings from Austria (NOT Australia, we have high mountains but NO
kangaroos.... )

Chris

Great!
I did the mod today in menue F15 and it gives now real 80 - 100W talkpower on 10m... (on the MFJ-Dummyload + vertical!!)
I am really happy now as it is a very good radio.

BIG BIG TNX for your support!!

Greetings Chris OE5CSP

-----Ursprüngliche Nachricht-----
Von: backhoefade [mailto:cgarner@...]
Gesendet: Montag, 6. Mai 2002 22:27
An: FT100@yahoogroups.com
Betreff: [FT100] Re: Low output on SSB....??!!

There are several output power controls within the secondary "F" menu; separate controls for HF, 6 meters, VHF and UHF. Let's talk about HF. First go to menu item 21 and set it to 100. Then access the "F" menu by shutting off the rig and then holding in buttons A, B and C while turning on the rig. After powering up like that, go into the function menu and scroll past the last item (somewhere in the 60's). Now you'll find yourself in the "F" functions. For setting the HF power you use F15. I don't recommend doing this unless you have an accurate power meter and you should only adjust this using a dummy load. That's your safest bet since the rig will start folding its output power back when the SWR is around 2 to 1 and that could mislead you. You set F15 in the CW mode for 100 Watts average output power. When you switch over to SSB you will have 100 Watts PEP output. Just remember to always set F15 in the CW mode with a dead key carrier.

If you're planning to run AM you will want to set menu item 21 to "100" and then go into the F functions and set F51 (that's fifty one) to the point where the un-modulated output power is precisely 25 Watts. First set your mic gain to 17 or, if you want to use the processor, set the level "within" the PRO control also to 17. Contrary to the description in the User's Manual, you cannot adjust the compression percentage. I confirmed this with an oscilloscope. The setting "within" the PRO button is simply an alternate MIC gain control which over-rides the standard MIC gain setting whenever you use the PROcessor. You can convince yourself of that by turning on the PRO and then turning the MIC gain all the way to zero. Then prove to yourself that the output power varies only as a function of the setting of the level control within the PRO button.

Don't bother trying to run AM until you install the 6 kHz filter.
You need it to have proper AM operation since the rig will attempt to
use the 2.4 kHz SSB in the absence of the 6 kHz filter, and that will
attenuate one of the AM sidebands and also suppress the carrier power
output leading to terrible sounding modulation. Once you get that
filter in there and set it up right though, you will receive very
good audio reports. Good luck.
N6AF Chas

# 13994. FT-100D on Jeep Wrangler with ATAS-100

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-07 21:59:01 UTC
From: bboerner
Topic: 13994  Message: 13994

Hello Everyone. I'm new to the group and would like to take advantage of the experience here before making what I consider to be an expensive purchase.

I just bought a 2002 Jeep Wrangler for some summer fun. I plan on commuting in this vehicle and want the added bonus of playing around on HF. I don't want to start the ICOM/YAESU war, but I have two options I'm currently looking at:

1. Yaesu FT-100D with the ATAS-100 Antenna
2. IC-706MKIIG with CB whip and ICOM Tuner.

I'm leaning towards the FT-100D as I've always like the features of the FT-1000, even though I'm an ICOM owner.

My plan is to install the antenna mounted on an aluminum pole that is attached to the spare tire mount. I'll have the antenna high enough to the base is flush with the plastic roof. I have basically no experience when it comes to mobile HF and was wondering if there are other Jeep owners out there who might lend some helpful words. Heck, even if your not a Jeep owner you probably know more than me.

I'm really hoping the ATAS-100 is as good as people say. I really like the idea of having only 1 antenna on the Jeep. I'm also not really into drilling holes in my new car and neither is my YL. She has agreed to allow at least one though. :)

Any thoughts?

Thanks,
Brian

Hello...
Check on your function menu
56 sql/rf Determines if the control behind the
volume control is squelch or rf gain.
-Likely want this set as sql...
-Squelch control for FM mode
-Another thing to watch for is WFM for wide FM
(Broadcast radio station receive) and FM that
would be used for FM repeaters. Holding the mode
button for 1/2 sec or so will change the WFM and
FM on the display.
Don't give up on the FT-100D!
Remember packet radio? It takes a couple of months
to really know this radio well!
All the best

Hello...
Likely an impedence mismatch trouble rather than
an audio adjustment. That FT-100D Mic is 2000 ohms
and the Heil HC5 ele will need a small transformer
to match the impedence. Radio shack has a 2000 ohm
to multiple tap transformer that will likely fit
right into the microphone case.
Bunch of Mic matching notes of been posted that
describe the impedence mismatch and sources of
transformers for different popular mic elements.

Here's a website with info about matching various mics to the FT-100D
using a simple impedance transforming mic pre-amp:
http://hometown.aol.com/ampmicro

I suspect your experiment was prompted by some marginal audio reports.
You can make your transmit audio sound great with the stock FT-100D
mic by implementing the "N2ZD mic mod". It's described here and also
at http://www.mods.dk

Wishing you the best in transmit audio. 73

If you really want to get "irked" try to find info in there about AM transmit operation. They don't even make it clear that you need the 6 kHz filter for proper AM operation. In case you're interested in AM op, go to http://www.mods.dk

# 13999. Re: [FT100] FT-100D on Jeep Wrangler with ATAS-100

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-07 23:37:18 UTC
From: The Simpsons
Topic: 13994  Message: 13999

Hello Brian
I have an FT100 in my 1996 Isuzu Bighorn (Trooper I think in the USA) 3.1 litre Diesel 3 door short wheelbase. I mounted my antenna on a bracket on the spare wheel carrier on the rear door. The antenna base is at roof level so the antenna can be folded forward over the roof for garaging, low trees etc.
I modified the mount so it can't tilt backwards, a problem in strong head winds at highway speeds.
I usually have a 20 metre whip (hustler centre loaded or homemade continuously loaded whip) installed and use an SG-239 installed inside the vehicle to match it. This system has given good results on all HF bands from 3.5MHz to 30MHz. It even matches on 6 metres! Efficiency is very low on 80 metres as you would expect, but I have had contacts throughout New Zealand on this. Had a lot of success on all other bands.
The most important thing to do is ensure the antenna mount is well grounded to the bracket, to the back door and that the door is well bonded to the body. The Isuzu is an all steel bodiedc vehicle, but I had similar success with the system on my previous vehicle, a Daihatsu Rocky (Four Track I think in the USA). This had a plastic rear body similar to your Jeep (though much smaller!)
For VHF/UHF I use a dual band on glass mounted antenna. Works OK and no holes to drill.
I chose the FT100 in preference to the 706 because of the greater receive frequency coverage, and I preferred the way the cables to the remote head work. I would definitely buy another FT100 if doing it all again.
Hope this helps.

Grant, ZL2BK

Subject: Ford trucks

I have a 1987 Ford truck and would like to know if any
one has had a ground problem with them.

Also Looking at getting a new 2002 Ford truck anyone having problems
with them using the FT 100d and ATAS 100?
NS7K

---

I just completed my FT100D install in my 2002 Ford Ranger x-cab (4 liter V6). Works great, all bands. I put the ATAS100 on a Firestick mount off the tailgate and a dual band Larson for 2m/440cm on the front fender opposite the car radio antenna.

I removed one of the nearly worthless jump seats behind the driver seat for the radio. I used the mounting bolts for the seat to mount the radio chassis. The control head is mounted on the center console just behind the 5 speed stick. That puts the controls right at your fingertips as you rest your arm on the console. I bought the Yaesu DC filter for the radio from Powerwerks. With that and a good ground strap on the ATAS, I get reasonably low noise from the engine. I do get some, but the NB seems to handle it good enough.

If you want to see photos, send me an email. I have to get the digicam out there and take them first!!

On another subject... Has anyone had problems with a squeaky tuning knob on the FT100D head?

# 14001. Re: [FT100] Digest Number 1218

Yahoo group: FT100 (2002-01 — 2002-06)

From: Ron Murdock
Topic: 14000  Message: 14001

Greetings from Yuba City,
The B&W folded dipole is okay at the top end of 80m and up, but is a complete dummy load on 160. It easily fills with water in the two enclosed pvc assemblies, and will be unusable until it is drained and dried. My use of this antenna is limited to nice weather.
I bought it based on the ad, a very bad mistake. When I questioned the factory rep, he said it had to be mounted 80 feet in the air in free space for it to have a chance to work on 160m. 'You can't change physics', he said. Indeed. This is contrary to the instructions included with the antenna as it comes from the manufacturer. The manufacturer will tell you one thing to sell the antenna, then revert to 'how stupid can you be?' when you question actual results.
The antenna will load on 160m with an antenna tuner, but it is not a good radiator when mounted at 40 feet in most urban settings. I believe it to be a ripoff.
73, Ron, W6KJ

That's the latest one I've heard about. It sounds like the fan mod at least has been done. That's a good deal.

> Don't get your feathers in an ruffle. The B & W dipole has a big
terminating resistor at the top of the dipole making it a 50 ohm resistive
load which is what a dummy load is. That is why you get wide bandwidth SWR.

So John's comments are descriptive and truthful.
> If you understand the fundamentals of antennas you would know that a dipole cannot cover the entire HF band with a flat SWR. And if the military wants to run more power then they put in a larger resistor. Most of the power is being spent as **heat**. Try this experiment, load your 100 watt xmtr into a cantenna or other dummy load outside and have a friend listen for your signal. Or if you have a MFJ antenna analizer put a small sniffer antenna wire on it and put it in freq counter mode and you will see that your signal will still radiate from the DL. Now put 100 feet of wire on the hot side of the DL and you just gave the little RF that is not heat energy a "springboard".
> Use the formula for quality factor, "Q" and youcan see that ANY LC circuit with a wide bandwidth is low Q.
> Q = Fr / BW
> Example If you cut a dipole for 14.150 Mhz and it has a 2:1 SWR bandwidt of 200 KHz then Q=14.150/.200=70.75. pretty high Q. Now if you have an antenna that you cut for 3.5Mhz and it covers a bandwidth of 26.5 MHz (30 - 3.5) then the Q would be 3.5/26.5=0.13.
> Seventy or point one three. Obviously the wide bandwidth is the low Q.
Does it work? Jed Clampet's truck worked but not efficiently.
> I will ammend my comment and say The B & W design is a very inefficient method of radiating RF.

# 14002. Ford Trucks

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-08 04:47:08 UTC
From: Dave Hornung
Topic: 14002  Message: 14002

NS7K

I have a 2000 F-250, great truck. The only problem is the engine EM. From past discussions I am given to under stand this is less of a problem with the Diesel. The rig on HF 40-80 with the engine running is close to being usless.

WB2SQR

# 14003. Re: [FT100] NEW TO THE FORUM

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-08 03:32:55 UTC
From: Dick Thompson
Topic: 13791  Message: 14003

Glad you got the problem resolved, Chris.

My Menu F15 is Scope Monitor. Menu 21 is HF TX PO which I have set at 100.

Hi Dick!
TNX for answer and info.
I solved the problem with the low output on SSB (menue F15 is the way
to go!!)

And you are absolutely right! The box of the FT had a GREEN dot on it.
So you think the mods have been done lately??!

Anyway I am really happy with my new transceiver and that's the most
important thing.

Greetings from Chris OE5CSP

Betreff: Re: [FT100] NEW TO THE FORUM

Hi Chris,

If your serial number starts with 1N, then the radio was manufactured in
December 2001. Yaesu starts with a C for January. So N would be
December. That's the latest one I've heard about. It sounds like the
fan mod at least has been done. That's a good deal.

I'm not sure how you tell if the SWR mod has been done. Someone said a
blue dot (or green) on the box indicated the mod(s) had been made to the
radio.

As for the power output, check it in CW mode. Don't count on a full 100
watts in all modes.

73,

Dick

Hi Dick!
Sorry for late answer !! i was busy in the job.

I was completely wrong, I mixed up the serial nr.. It starts with 1N
so
I think this unit must be produced in November 2001???
The box has a green dot on it. I don't know what this means, but I can
only tell you that the fans are running constantly.. so I think yaesu
has done already the fan mod.

I have a MH-42b microphone and It works great. Got some real good
reports today on 10m

Betreff: Re: [FT100] NEW TO THE FORUM

Welcome to the forum, Chris. Nice to have you aboard. Your
manufacture
date is the newest I've seen on here. The serial number must start
with
2C. Right?

I don't know whether anyone can really say for sure if the mods have
been done on your new 100D. Do the fans run continually on VHF/UHF
like
they do on HF (when receiving)? If they do, then at least the fan mod
has been done on yours. Also, mention has been made of a Blue dot on
the label or box. Do you see anything like that?

Let us know.

73,

Dick

Subject: [FT100] NEW TO THE FORUM

Just to say hello from Austria to all members connected to this fine forum...

I joined a few days ago, when I received my FT100D from the german dealer....
Took me 8!!! Weeks to wait for it...But I am happy to have a unit of the
latest production series... The serial nr. Production date January 2002!!!
So I guess all the mods have been done??!! Anybody who can confirm this??

Anyway it's a great little rig, and I really like it much even if I am
only using it now for 2-3 days :-)))

BTW thanks for this forum, I have got some real good infos about the FT100... I had to decide between IC706MKIIG and FT100D... Finally I think I have done the right thing!!!

Greetings from Austria (NOT Australia, we have high mountains but NO kangaroos.... )

Chris

Don't you mean Deceptive and truthless?

> If you understand the fundamentals of antennas you would know that a
> dipole cannot cover the entire HF band with a flat SWR.

You are of course forgetting ALL of the other factors
involved in antenna theory. Antennas also have capacitive
and inductive elements. Current flows unequally through
each element, more current flows (and if we could see it
more radiation occurs) near the cable, and less near the
tip, where that "resistor" exists. Antennas do not perform
like a dummy load.

> And if the military wants to run more power then they put in a larger
> resistor. Most of the power is being spent as **heat**.

Nonsense, my own testing confirms the radiation
is not being dissipated.

> Try this experiment, load your 100 watt xmtr into a cantenna or other
> dummy load outside and have a friend listen for your signal. Or if

> "springboard".

Pleas get real. How many dummy loads do you
have hanging from your dipoles?
This antenna outperforms dipoles cut for the higher
frequencies...

> Use the formula for quality factor, "Q" and youcan see that ANY LC

>
> 73,
> Norm, W3IZ
>

Sorry norm, it's NOT a dipole.
It radiates quite well. It outperforms
a dipole on the upper bands...
quite a feat for a "dummy load"

So how do you explain this performance?

From: Herbert Haslinger
Topic: 13791  Message: 14005

Hey Dick!
No thats not the menue i mentioned to increase the HF power on your FT100...Its one of the hidden menues (no joke!!)

To activate the F-menues: Turn off the power.Press buttons A,B,C (all togther) and turn the radio on.
Scroll down to the last menue (i think its 65 or so) and you see the "F" menues. Scroll to the "F15" here you have the possibilty to adjust seperatly the Power for HF, 6m, 2m, 70cm......
I did it on mine, it worked!!
I adjusted it with my MFJ dummyload & meter. So the radio has exactly 105W PEP when whistling on SSB, or around 70-90W when talking on SSB....
That´s what i wanted cause i use NO Linear, just a 2 El Monoband-Quad for 10m + the radio. "SMALL IS BEAUTIFUL".....

Hey man the more i get used to this lovely little radio the more i like it!!!!!!!!!!!!!!

73´s from

Nope you'll need the money to purchase
a real antenna theory book. One without too
many pictures...
;-)

> "If you understand the fundamentals of antennas you would know that a

You are ignoring FACTS.

One.
It DOES cover the advertised bandwidth
with less than two to one SWR.

Two.
Despite spurious claims made here,
the antenna DOES perform at least
as good as most dipoles, and it
actually has GAIN on the upper bands.

Three.
No tuners, no power needed, no
radials, and it even dissipates static loaded
from wind, rain, and snow.

I'm not speculating, I've tested it.
Direct comparisons with tuned
full size dipoles. Of course...
It's not a Yagi, nor is it a
Log Periodic. Would I love to
own one of these?
Naturally.
I would of course also need a big dog
to scare off all my neighbors who would
suddenly blame me for interference to

their blenders, and power tooth brushes.
:-)

Did I mention that the antenna also is
a bit stealthy?
No?

Well it is.

Ok, more to the point.
The B&W matches well with radios
like the FT100, providing efficient
operation without the loss of
transmitting power that accompanies
antennas with narrow operating
bandwidths.

Ok?

>

Ok, this gives me a point to bring up
my latest antenna situation.
We all know how much the lack of a
mobile antenna can put a crimp in our
mobile rag chewing.
No antenna, no fun.
Having said this, I'm also sure many of
you have struggled with the various
screwdriver, and bug-catcher designs..

These antennas really stick out.
Anywhere from four feet up to 10-12 feet
"out", or in most cases up. (depending on speed)
Then there is the width...
Can we say Plumbing Truck?
The smaller the car these things are mounted on,
the louder the XYL screams!

So I've been wondering, what would happen if
I could mount a SGC tuner on the roof rack, down
low, and for the antenna, instead of that expensive
whip they sell, I substitute about 80 feet of wire,
my roof will support about four loops, which could be
mounted temporary to confirm the best operation.
Then I could try a non metallic tube that would look
a lot like a roof rack basket, like Yakima makes.

The testing SGC did indicates that this size loop
does function well. In fact they are currently
making a kit they call the "Stealth Kit"

http://www.sgcworld.com/stealth/index.html

Hmmm, a wide band loop for mobile...
sounds interesting.
And no tree, traffic light, power line, or bug
catching.

Ron, I'm sorry to be always in the position
of supporting what is, only one of my antennas...
but I just have to ask...
Why?
Why would you pick a band that is at the edge
of the stated operating characteristics of the
antenna?
My older antenna is rated for 3.5 - 30.

I know the newer one says 1.8 - 30
but it really needs more wire to reach that
band. Adding more wire will get you what
you want, but it will change the upper band
operating characteristics.

> It easily fills with water in the two enclosed
> pvc assemblies, and will be unusable until it is drained and dried.

I wonder if B&W changed the design?
My antenna is sealed, and has never given me
any problems in any weather.

> 73, Ron, W6KJ
>

What about the other bands?
I do have room for a dipole for 160
if I wanted to use that band, but
I will admit that if you bought it to
operate on 160, you will have problems.

Question is, what is a "good" radiator
on 160 mounted at 40 feet?

If it's any help, I've seen these antennas
enlarged from an overall length of 90 feet
to about 140 feet, for use in the 1-2 MHz
bandwidth. You will need to get it up there
though. If you mount it as an inverted V
you only need to elevate the center. The one
I tried was at least 75 feet in the center,
and about 25 feet at the ends. It seemed to
work fine with no tuner. It was set up for
a field day and it had a collapsible center
mast, held in place by the antenna, as two
guys, and two more non-conductive lines
for a total of four guys.

I'd get ahold of a roll of copperweld and
replace your existing wires. The current
antenna is 45 feet X 2 feet each side with
three spacers, one near the center, the
second in the middle, and the third is at the
end. The one I used had four spacers on
either leg. The spacers are just pvc pipe, four
feet of which won't set you back too much.
That wire and solder as needed is all you
need.

Whoaa... down boy! No need to get personal.

Referring to a previous statement that the aerial in question outperforms a dipole on the higher bands.... well maybe (multiple wavelength antennas have 'gain') but are highly directional with lobes. They will never be as good as a dipole cut for resonance at the appropriate height - depending upon where you want to put the signal. Multiband aerials are always compromise by definition. Nobody is arguing that it 'doesn't work' or 'meet the claims' rather than it is not an efficient radiator - it can't be.

Regarding your statement about requiring a big dog to fend of neighbours from EMC issues caused by using a log periodic:

1. This proves my point - there must be more radiation from the log periodic to cause the problem. Athough if you did have a beam at 60 feet you would probably get less EMC problems unless they were in the near field.
2. It doesn't matter what the aerial is, if the power is going out you will/may get EMC issues unless the power is aimed away from the devices which suffer (almost impossible to do)
3. In Europe we have strict EMC directives which have cured a lot of these issues. Everybody including myself groaned when the EMC directives came in but we have all benefitted. If you have a neighbour with an EMC problem you simply have to cure it there is no other way.

How big is your garden? If you can put up dipoles for the bands you want to use you will get better performance. You may also want to feed the dipoles with twin feeder rather than coax.

I've no intention of teaching you or anyone to suck eggs by the way, just stating what I have found to be effective over the years.

Cliff, G4PZK

"I know the newer one says 1.8 - 30
but it really needs more wire to reach that
band. Adding more wire will get you what
you want, but it will change the upper band
operating characteristics."

So it is a compromise aerial.

Cliff

Ron, I'm sorry to be always in the position
of supporting what is, only one of my antennas...
but I just have to ask...
Why?
Why would you pick a band that is at the edge
of the stated operating characteristics of the
antenna?
My older antenna is rated for 3.5 - 30.

I know the newer one says 1.8 - 30
but it really needs more wire to reach that
band. Adding more wire will get you what
you want, but it will change the upper band
operating characteristics.

I wonder if B&W changed the design?
My antenna is sealed, and has never given me
any problems in any weather.

>

What about the other bands?
I do have room for a dipole for 160
if I wanted to use that band, but
I will admit that if you bought it to
operate on 160, you will have problems.

Question is, what is a "good" radiator
on 160 mounted at 40 feet?

If it's any help, I've seen these antennas
enlarged from an overall length of 90 feet
to about 140 feet, for use in the 1-2 MHz
bandwidth. You will need to get it up there
though. If you mount it as an inverted V
you only need to elevate the center. The one
I tried was at least 75 feet in the center,
and about 25 feet at the ends. It seemed to
work fine with no tuner. It was set up for
a field day and it had a collapsible center
mast, held in place by the antenna, as two
guys, and two more non-conductive lines
for a total of four guys.

I'd get ahold of a roll of copperweld and
replace your existing wires. The current
antenna is 45 feet X 2 feet each side with
three spacers, one near the center, the
second in the middle, and the third is at the
end. The one I used had four spacers on
either leg. The spacers are just pvc pipe, four
feet of which won't set you back too much.
That wire and solder as needed is all you
need.

From: cardealers
Topic: 14012  Message: 14012

Why do you receive SPAM on a Yahoo!group?

Easy. The list is set so that anyone can join. "Robots" join lists and then post to them.

The owner can set the list to "moderated entry"... and a file is generated to be sent to pending members...and everyone who tries to join is sent an email requesting a valid callsign or a statement on their interest.

Often, the user ID *IS* a callsign so the choice to allow entry is obvious. The owner and moderator get an email from Yahoo! asking if the person can join. Click "reply" and they're in. Otherwise the owner/moderator waits for the email from the member giving the credentials, and goes to the "pending member" page to allow entry.

Robots do not read the mail so they don't "get" what to do. The owner cleans out any pending members over a period of time who haven't responded.

Thanks

OK, Chris. I recall reading that in one of the messages on the reflector.

I'm not going to mess with mine. I'm getting the power that I need and I've always said "If it isn't broke, don't fix it." :)

They are neat little boxes aren't they? I'm getting anxious to run mine in my camper this summer. I'm in the process of wiring the DC line. I installed the coax yesterday. I'll be using Hamsticks for that operation.

73,

Dick

Hey Dick!
No thats not the menue i mentioned to increase the HF power on your FT100...Its one of the hidden menues (no joke!!)

To activate the F-menues: Turn off the power.Press buttons A,B,C (all togther) and turn the radio on.
Scroll down to the last menue (i think its 65 or so) and you see the "F" menues. Scroll to the "F15" here you have the possibilty to adjust seperatly the Power for HF, 6m, 2m, 70cm.....
I did it on mine, it worked!!
I adjusted it with my MFJ dummyload & meter. So the radio has exactly 105W PEP when whistling on SSB, or around 70-90W when talking on SSB....
That´s what i wanted cause i use NO Linear, just a 2 El Monoband-Quad for 10m + the radio. "SMALL IS BEAUTIFUL".....

Hey man the more i get used to this lovely little radio the more i like it!!!!!!!!!!!!!!

You missed the point, it's not compromise,
which by the way ALL multiband aerials,
and for that matter all aerials also contain.

The point was a lack of acceptable operating
on 160. The point being... that just like discones,
the B&W has a lower cutoff. You need to modify
the basic designs to get the lower frequencies.
In the B&W's case, it needs to be a bit longer to
effectively operate at the lower frequencies.

You add an element to discones to cover frequencies
outside of it's operating bandwidth, and you lengthen
the B&W to cover frequencies below it's operating
bandwidth.

We're Amateurs, we can modify our equipment,
AND antennas to work better...

See?
it sez so right here in my little handbook.

I didn't miss the point at all. Keep using compromise aerials if you wish but a dipole as high as possible will always win.

Ask yourself how many serious dxers use aerials that present a good match from 1.8 to 30MHz with no gaps. All the serious LF dxers over here use verticals or high dipoles with some inverted V usage. Then there are the four square users and the odd high loop and beam guys but all single band or maybe two band matched systems.

Just out of interest how many years have you been at this aerial/antenna game?

Anyway if you are happy with your system then good luck to you and enjoy.

My best 73 Cliff, G4PZK

# 14018. Re: FT-100D on Jeep Wrangler with ATAS-100

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-08 20:57:34 UTC
From: ab8jc
Topic: 13994  Message: 14018

Hi Brian,

I just got a 98 TJ Sport (only 27K miles!). I have an FT-817 and an Outbacker-style antenna. I also have a CB for non-ham communications during offroad trips, an FT-1500M for 2M FM & a scanner... so I need 4 antenna mounts. Am considering an FT-100 for a permanent vehicular rig but wanna see the '897 first & anything from the other big manufacturers at Dayton. Don't ask where I'm putting all these radios; I don't know yet! Tuffy, I think you're gonna get some of my $$ soon....

For the CB (full 102" SS whip) and the 7'+ Outbacker, I am going to order Teraflex brake light brackets http://www.teraflx.com/ or http://www.trailquest.com/teraflex/tj/tj_brake_extension.shtml that go between the body & the brake lights -- they bolt on using the brake light mounting bolts (there are three of them; unscrew the 4 screws holding the brake lens on & you can see them). It's a steel bracket, looks plenty thick & tough enough to me. Around $16 each plus shipping. Haven't entirely decided what to do about the 2M rig & scanner yet. Looking at Firestick fender mounts http://www.firestik.com/Catalog/SS-j4.htm but am of course concerned since there would be a ground plane under only one side of the antenna (probably will build a 2M sleeve dipole and just "deal with it" for the scanner).

I have seen pics of antennas mounted on the spare tire mount (and that was, in fact, my own first thought), but consider this: The number one problem in mobile installations is insufficient grounding. The spare tire mount is itself mounted to the tailgate. The tailgate is NOT BONDED ELECTRICALLY to the frame or the rest of the body. You would *HAVE* to add lots of braided ground straps to the frame from the tailgate -- thus you might end up having trouble opening the 'gate, not to mention the appearance problem. You'll have the antenna up high enough using something like the brake light mount (you don't need/want it up quite as high as you're talking about in your post, esp. if you off-road, but if you off-road, you'll probably want to remove the ATAS-100 first anyway).

I know both '706 owners & '100 owners. Both are generally happy with their purchases. Both groups have pet peeves and problems. The ATAS will probably work a bit better than the CB whip on 30/40M due to higher Q. But neither antenna is gonna be *great* there. You really wanna work the low bands mobile, get bugcatchers or *very* large diameter screwdrivers. Or try an autotuner with something for NVIS (though that could get interesting in a Jeep).

# 14019. AM filter

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-08 21:14:55 UTC
From: Jim Lasswell
Topic: 11373  Message: 14019

Hi guys... I am trying to install an AM filter in my FT 100, and am up against a stump. HI. I very carefully raised the circuit board and found 2 places that the filter will fit into. One is marked FIL 1 and the other is marked FIL 2. Any one have any idea which one the filter should go into. Thank, AD6DW Jim.

The user's manual tells you which position is for the AM filter.
Or someone here can check their manual and tell you. I'm at work
right now so I don't have the info. It's near the back of the book.

Thanks Chas
I looked a little harder and found it.
Some times it pays to read the book .
Thanks very much. 73 de AD6DW Jim
PS This little rig works better every time I turn it on and use it. Is is excellent on cw as well.

Ignor my last post. I sent it just before you replied so it looks
like I'm not listening but I am. After you get the filter in there
read the AM operating info at http://www.mods.dk
You will get good results. It's a good AM rig.

# 14024. fanspeed drops when transmitting

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-08 22:58:02 UTC
From: Peter van Daalen
Topic: 14024  Message: 14024

My FT100 PSU is a switched 22 amp SEC1223.
When in TX the PSU voltage stays perfectly constant ( 14 V ) but the set's fanspeed drops I guess abt 25%.
Is this normal ?
The set is till under warranty.

# 14028. LDG Tuners & One-Touch Tune

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-09 01:58:01 UTC
From: w4wb
Topic: 14028  Message: 14028

The FT-100D works great with either the LDG Electronics AT-11MP or RT-11 tuners. The only problem is getting the FT-100D to generate a stable tuning carrier without having to switch modes, etc.

The W4RT Electronics One-Touch Tune (OTT-100D) solves the problem. When the OTT-100D is used to connect the FT-100D and AT-11MP/RT-11 tuner, all that is need to tune is to just press the TUNE button on the LDG tuner. The 10:1 tuning range of the AT-11MP or RT-11 tuner offers significantly more flexibility in your antenna selection/design and application (compared to the maybe 3:1 range of the Yaesu tuner).

In addition, you can now have a tuner and still retain your ability to use the CAT!

If you are going to Dayton, please drop by Booth 114 (W4RT Electronics), which is across the aisle from Heil Sound, and see the FT-100D, LDG tuners, and OTT-100D in action. We plan to have some special Hamvention pricing on the products. The OTT-100D and LDG tuners will be available at Dayton.

I installed an FT-100 in a 2001 E250 cargo van and it works great. I have a little bit of "spark plug?" noise but the noise blanker takes care of it. I've made contacts into the Czech Republic and Uraguay while doing 75mph on 20 meters. The van has a 5.4l engine. I use an ATAS-100 mounted on the ladder rack on the roof. (yes, it's goofy looking but works great!) I didn't do any abnormal grounding other that grounding the ladder rack to the body and grounding the radio itself to the drivers seat mount because the radio is screwed to the plastic covering the transmission between the front seats. Hope this helps.

Sean

# 14030. Dead Recv thoughts

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-09 03:10:03 UTC
From: J. Craswell
Topic: 14030  Message: 14030

I just fixed mine which had a bad -9Volt power supply to the front end. The fact that the HF is deaf also seems like this might be a similar problem. I waiting on a new part but you can pul the Choke from the output of the DC 2 DC converter (12 in -9 out) and put in a 9 Volt Battery (Backwards of course) if you see no -9 going to the main board. BTW the -9 stuff is underneith the PA board. I was able to fix mine but depending on your experience you might want to seek help elsewhere. Good luck!!!

You a member of a gang?
(heh) I joke, but seriously, there are many factors
in competition. Extra points go to those who get 'em
up, way up, out in some forsaken patch of wilderness.
We call it EXtreme Communications (better known as
a DXpedition, or Field day.) Hey, there has to be some
way to grab those kids or we all are going to end up as
exhibits in a museum some day. The new radios like the
portable Yaesu, and yes mobile with the FT100D can really
fill the bill. Still it's the antenna that makes or breaks the
whole thing. Talk about compromise, just look at
what we use mobile. You don't ground that Bug Catcher,
or get the high current portion of the antenna above all that
metal, and you loose. If we're honest, big antennas like a full
size dipole on 160 really take real planning to construct, and
KEEP up in the field.

> Then there are
> the four square users and the odd high loop and beam guys but all
> single
> band or maybe two band matched systems.

Ever see a multi-tap loop array? Can you imagine
the effort that goes into lofting one of those? THAT'S
an antenna.

> Just out of interest how many years have you been at this
> aerial/antenna
> game?

More like decades...
If you know what an "Old Crow" is,

It comes with the SSB filter (2.4 kHz or there-abouts).
You want the 500 Hz filter for CW. I run CW much of the time.
For AM operation and SWLing AM stations you need the 6 kHz filter.
See my post at http://www.mods.dk regarding AM operation.
Have fun. Great rig!

Can you actually install both the CW and AM filter in the radio. The manual seemed to imply one or the other could be installed but not both.

Great radio!

The radio can hold up to three filters total.
In mine I have the "SSB" filter, the 500 Hz CW filter and the 6 kHz
AM filter. Very versatile! Neat rig!
N6AF Chas

One note: I have heard that the 300 Hz CW filter is "troublesome" to
use in conjunction with the DSP bandpass filtering and really doesn't
help in crowded band conditions over the 500 Hz filter due to its
more moderate skirt roll-off. So I would go with the 500 Hz
CW "standard". I can tell you personally that the 500 Hz filter in
conjunction with the DSP bandpass dialed to 120 Hz is great during
crowded CW conditions.

Yes, although I had some dingleberry tell me once that it is impossible.
Even though the radio is sitting there, with both in.

From: backhoefade
Topic: 1955  Message: 14043

There's no way to trouble-shoot effectively through this web-site.
Common sense tells me that you should not have affected any mode of
operation (except for adding 6 kHz filter selection of course!).
So I would just power up the rig, make sure it's in SSB mode with the
MODE button and make sure that the 2.4 kHz filter is selected in the
filter selection menu. Then you should hear stations and, with a
proper antenna, be able to transmit (given that your basic settings
are OK such as mic gain, transmit power, etc). You know all this
stuff because you've been using the rig - or are you a brand new
owner? If you can't get the thing to transmit in SSB or CW mode and
you're sure all your settings are normal then I would sadly guess
that you have a problem inside that came about when you installed the
filter. But first try to get it to function as you have before. If
it still doesn't transmit then you can open it up and carefully check
all the ribbon cables to make sure they are fully seated in their PC
board sockets. That's what got me - one of the ribbon cables wasn't
fully in its socket. Don't worry too much - it can only likely be
one connector that's not seated.

Did you follow the instructions about the menu set-up to enable the
6 kHz filter that's in the back of the Manual? That shouldn't affect
SSB and CW operation but maybe somehow that's involved.

HI, THIS IS FEDERICO, XE2NLM, A FRIEND OF MYNE HAVE a new ft-100d,
but have a Deaf VHF , even FM Broadcast have very low s meter and
audio.

does anybody can tell us if there is some software adyustments like
tune up that we can do or it is better to send it to yaesu?

kind regards and 73

# 14046. FT-100 Update

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-09 23:42:31 UTC
From: n8uvq@juno.com
Topic: 14046  Message: 14046

Today, 09-May-02, Yaesu called. My FT-100 departed from Cerritos
yesterday via UPS Orange label. Yeasu has had my rig since its
arrival on 22-March-02. When I have it in hand, I'll tell the list what
warranty repairs were done as well as part replacement.

# 14048. RE: [FT100] Re: Has Been Vs 21st Century - A disagreement.

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-10 00:35:12 UTC
From: Cliff Bryant
Topic: 14048  Message: 14048

1. Glad we sorted that out it was an easy starter for you.

2. Joke? Really? Please provide a warning in future so we know when to laugh (just to be polite that is). Apology accepted by the way.

3. Again what are you on about?

4. You obviously haven't seen the three small trees in Sherwood Forest either. Again nothing to do with the question of using a compromise aerial. Incidentally you should have written Adak 'forest' not 'Adak' forest. Look up how to use quotation marks for the next email.

5. Old Crow - What have aeroplanes (primitive ones with pistons at that) got to do with a compromise aerial? As for military 'buddies' you must be joking. Maybe you need to 'belong' to a military group, the military isn't really known for thinkers is it?

6. Simply interested why you had no concept of a compromise aerial vs a decent aerial, whether it was because you were new to the hobby. Since you indicate to be an 'Old Crow' your breadth of knowledge is astounding.

Anyway, OM, since you are unable to conclude a discussion about a broadband dipole versus a conventional system without digressing about 'forests', the military and harking back to 'glory' days with references to 'Old Crow' aeroplanes there would seem no point in continuing further.

Yep, you asked questions for sure, a little slow learning the answers maybe but you are getting there.

:-)

# 14049. Intermittent Problems with ATAS-100 Antenna

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-10 01:09:16 UTC
From: vmi_1979
Topic: 14049  Message: 14049

My antenna either works great when auto tuning or manual or does not work at all (no motor sound or anything). There seems to be no rhyme or reason to when it works or not. When not working, the radio indicates that it is transmitting and the tuning icon is on. At this point the antenna will not move, either in auto or manually. The icon will time out after a couple of minutes. Any suggestions or insight would be greatly appreciated.

# 14050. Re: FT-100 Update

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-10 02:02:32 UTC
From: n8uvq@juno.com
Topic: 14046  Message: 14050

On Thu, 09 May 2002 23:50:43 -0000 "backhoefade" <cgarner@...>
writes:
Why did you send it in originally?

The following is a copy of my original post describing the problems with
my FT-100.
I believe I posted the message on 09-March-02

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

Looks like my FT-100 needs to return home to Cerritos. On ten meters
through a tuner into a dummy load the high SWR icon appears. I can not
adjust the SWR via the tuner, even when the power setting is on 5 (~5
watts).
The tuner and associated cables test good with a VOM. If I switch to an
older Kenwood rig or a friend's FT-817 and keep everything else the same,
I can adjust the SWR. Doesn't look like my tuner or cable is the
problem.
Never attempted adjusting with an antenna connected.

Signal strength of a local 2 meter repeater (~4 miles away) & NWS
decrease as the rig heats up. Yes, the fans do not run. Usually I use
the rig for
HF, but I feel this also needs addressed by Yaesu.

Fortunately, it's under warranty. My FT-100 was purchased in June 2001.
Its serial number is 9J100xxx. What is the average turn around time for
warranty repairs? Has anyone some pointers to possibly accelerate the
process?
Should I ask them to do all the mods and updates? Or do they do the mods
&
updates without asking?

Check the under side of the board you may have sprade some solder around
the area while soldering the filter in. I use the 300 for CW and the 6kc
for AM they both work great. I installed the 300hz filter where the 500
would go so I could install the 6kc filter and have all the filters I
wanted; BUT WHEN YOU USE THE 300 HZ FILTER YOU MUST REMEMBER THAT ITS IN
THE 500HZ POSTION, therefor when you are enabling the options you enable
the 500 hz filter for the 300 hz filter and the of course you enable the AM
filter.

# 14058. Re: [FT100] Intermittent Problems with ATAS-100 Antenna

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-10 11:50:51 UTC
From: john BUNKER
Topic: 14049  Message: 14058

ATAS-100 wont work over certain swr hard to know what swr you have using the swr dashes in display.May have to turn radio off then back on tor reset processor then Antenna will go all way to the end and back which takes time. It also takes a good ground to operate the motor in antenna. I installed the ant in a ford ranger and had to run a wide brade to frame to get swr down in able to tune then it worked ok.The Antenna is not as efficent as a longer antenna think its considered a base loaded type. 102 inch center loaded antenna makes the ATAS-100 look sick but that type of ant is a monster. ATAS-100 looked beatiful on my Lincoln Towncar but I sent it back to HRO and got a refund.It just weares out your transmitter. I made a lot of tests on the Ant wile I had it befor the 10 days return.Best Ant for me for the price is ATOC ihf series or Valor they are longer and more efficient. The use of the RT-11 auto tuner remotly connected to ant base is hard to beat if you need to tune off the BW.

SWR Bars = swr Another ham made measured these but I checked
1 1.5
2 1.7 them out and found them to be about same.
3 1.9
4 2.1
5 2.4
6 2.6
7 2.8
8 3.0

Tim,
Please don't take this all so personally. And don't be surprised when hams ridicule antennas that use resistors to widen bandwidth, when hams traditionally work very hard to keep resistance losses to a minimum.

Several years ago QST and CQ reviewed antennas with this type of resistance. QST was really tough on the manufacturer, which made me quite surprised when B&W, a reputable manufacturer, began selling one.

In your case you have decided it is worth the signal loss for large bandwidth. That is fine. But the ham tradition is to attempt to eliminate loss and accept the narrow bandwidth. Understand that the manufacturers of these antennas are sometimes less than honest about this loss. If we are willing to accept this decrease in radiated signal, then fine. Its kind of like driving a 4 cylinder for gas mileage and giving up performance (which I do.)

Number one follow Chas N6AF's settings for the am mode, they are posted here and can be found using an Archive search. In addition, I posted many pictures and some documents in the files area here on how to remove the board for the filter install. Read it and look at the pictures and you will see how it comes apart. The only problem in doing the filters is that it requires you to remove the swr mod to get the board out. Its quite easy after that point but be neat and follow my instructions and check out the pics. They will help you remove and install all of the cables and connectors easily..

Check the files area, I posted some pics and some materials to aid you thru the process.. Do not use any tools to remove the ribbon connectors! A fingernail or small flat jewelers screwdriver is all that is needed at the most to lift them up.. Check the files area everyone performing the filter mod, the pics and documents are there for you.. Regards.. Richy N2ZD

# 14062. my local repeaters

A suggestion for those performing mods or those that are new to the group. There are TONS of pictures of the accessories, mods, filter installation info etc.. To be found in the files and photos area of this group.. Look to your left side of the Yahoo screen, you will find the helpful pics and info there. I noticed many of you are perplexed with the filter install and what the other mods entail.. Its all right there in picture format to help you out.

Also check out the vehicle installations posted there also for tips on how to install your gem into the car..

Dont forget to buy your wife an FT100 or D model for Mothers Day!!
73 and warm regards.. Richy N2ZD

If you confirm the ground to the ATAS is ok, and your coax is ok, the next time it stops moving (when it says it is tuning), while it's on the mount, take an ohmmeter and measure the resistance from the chrome at the very bottom of the antenna to the thin silver ring three inches (about 8cm) up from the bottom. It should be a direct short.

If it is not, you have an open/intermittent z-match coil in the base. Another way to confirm it is to put the meter on it like before, and have someone else grab the bottom 3 inches, and give it a slight twist back and forth. If the meter moves from open to short to open, it's the coil connection. The PC board that drives the motor in the ATAS takes its ground connection through this coil. If the coil is open, then antenna will stop moving, even though the rig says it is.

It's rare, but mine failed this way, and did exactly what you are seeing. Report back what you find. If this is the problem, there is some information in here on what to do.

Mine also failed this way. Twisting the base is a sure way to see if that is the culprit. By base was pinned and I could not get it apart. Yaesu wants $160+ for a new base.

Yep, mine too. I tried to open it up (drill out the pins) and it got really ugly real fast. If the bottom section has a pin at the bottom and a screw at the top, you may be ok (ok = you can get it open for repair). If it has a metal pin at bottom _and_ top, your hurting:

Option 1: Call yaesu and order a new one. The $160 US figure is correct. Been there.

Option 2: If you either have a good machine shop/tools or know someone who does, have them drill/mill out those pins, and drill holes and tap for replacement screws. This is not a job for hand tools. Once it's open, it's a quick 2 minute solder job to repair. It's just getting it open. And then being able to put it back so it will hold together.

Option 3: which I haven't tried -- the solder tabs on the coil appear to fall inline with the pins. With some careful planning, I bet you could drill two holes into the tube above the location of the solder tabs, repair the joint, and then fill the holes with silicone or put heatshrink over the tube. There is an airgap between the inside of the tube, and the coil, so you should be able to penetrate the tube without hitting the coil. If you do option 1, send me the old base, and I will try option 3, and document the results for the list.

Each memory channel will store repeater offset and tone status. Simply set the complete repeater information into the VFO and memorize. Make any and all changes to the next channel and continue on.

Hi to all on the list!
Has anybody made an experience with a Heil-Headset like the BM-10 with
an HC4 on the FT100????
I am seriously thinking of buying one for mine, as I always wanted to
make "Vox" operation, but I haven□t got a radio in the past which was
able to do it...

I visited Bob Heil´s site and made the sound comparisons between the HC5
and the HC4... I think I go for the HC4 "DX dream machine".... :-))))

I hope it will make my little "baby" scream hihi!!!

Greetings to all and have a nice weekend...

BTW I am on air tomorrow morning (8.00 CET) on 10 & 20m SSB & CW....
If you hear me callin´ try to come back to me....
Hope condx will be better than the last days...

I purchased a used Comet UHV-6 mobile antenna to use with my FT-100.
I know it will be very inefficient, so I am not expecting too much, but it
does replace two hamsticks and a 5 foot dual-band antenna that were on my
previous car.

Does anyone know of a group for users of this antenna? I know it is
somewhat off-topic for this one. I am wondering if I have a problem with
one of the coils or if I just need to trim the stinger. I received no
instructions with the antenna. (No, its not the
hi-swr-spurious-oscillation demon, I've tamed that one.)

If no one can guide me to another group, I'll ask here!
Tnx & 73,
Paul K4PDM

# 14076. Re: [FT100] 1750 Tone Burst on FT-100D???

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-10 18:00:29 UTC
From: Mike May
Topic: 14073  Message: 14076

Yes it does, you have to press and hold in the 'home' button which can be configured to a particular button on the radios microphone or by pressing the 'home' button on the radios front faceplate, that is you do not program the tone burst into a memory as you would a DPL or CTCSS tone just press the 'home' button and it automatically transmits the 1750 tone..

Two questions:
- Can you set the tone burst to frequencies other than 1750 Hz?

- The ability to "configure" the Home button to a particular mic button intrigues me. What is the extent of "configurability" of functions? I think the answer is about zero. What I'm getting at is I have always envisioned a rig that would let you "program" controls so that you could, for example, set up the rig so a particular button would take you directly to the Noise Blanker function.

# 14078. Semi QSK CW issue

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-10 19:13:36 UTC
From: Bob Evans
Topic: 14078  Message: 14078

Has anyone seen their rigs go "key down" in CW semi break-in only?

A friend of mine just bought a new 100D and it works perfectly in full break-in QSK and fine in semi-QSK if CW delay (function 49) is set to zero, however, it goes to solid transmit any time CW DELAY is raised above zero. We've eliminated RF feedback issues (we think) as a possibility and are just wondering if we are missing anything obvious. This is just being mounted in his shack where an FT-1000MP has had no RF issues and antenna (3 el yagi) is working fine.

I appreciate keeping losses to a minimum.

> Several years ago QST and CQ reviewed antennas with this type of
> resistance. QST was really tough on the manufacturer, which made me
> quite
> surprised when B&W, a reputable manufacturer, began selling one.

Do you remember the year?
I'd like to read that review.

> In your case you have decided it is worth the signal loss for large
> bandwidth. That is fine.

No it's not. If this is the case, than
it's not fine at all. The real question
is if it's really true in the field.

I've compared this antenna to
dipoles arrayed in an inverted V
(not beams, an unfair comparison)
and the results indicate that the two
are quite similar. With gain on the
upper bands. This is in spite of the
resistor. With the exception of one
person commenting correctly on the
effects of a longer antenna, and the
consequences of that length, no one
has addressed the apparent equality,
with the bandwidth issue being a plus.

> But the ham tradition is to attempt to eliminate
> loss and accept the narrow bandwidth.

I don't think there is a "Ham Tradition"
to accept ANY condition. We have a
very real tradition of innovation, and a
willingness to get out there, build &

test them.

> Understand that the manufacturers of
> these antennas are sometimes less than honest about this loss. If we

> kind of
> like driving a 4 cylinder for gas mileage and giving up performance
> (which
> I do.)

Ok, you have a point...
now in the true ham spirit...
prove it. My results contradict
you point, but so what...
what we are after is facts..
can anyone post side by side
measurements...
?
Anyone?
(That QST article would help)

Tim & crew,
For some reason Yahoo held my message for several days before sending it.
I wrote my message before this conversation got so heated. I really don't
want to fan the flames!!

The QST article did not test the B&W antenna, but a different brand with a
built-in matching resistance. The test might not be directly applicable.
I don't know of any test of this specific antenna.

Again, don't want to fan the flames...

No, it seems to be hardcoded to the HOME button only and the frequency
is also harcoded to 1750 hz. I agree about having reprogrammable
features for each of the Mic buttons. Just like programming one of the
newer Motorola radios in RSS.

Chris:
I use the Heil BM-5, a HC5 element on my FT-100 mobile and love it. I get very good audio reports and with the VOX, I can keep both hands on the steering wheel. I made a 4 inch pig-tail and double female connector so I can switch mic's if I want to without removing the front panel from the body of the rig.
Hope this helps a little bit.
73's, John K2GVP

From: Peter van Daalen
Topic: 14086  Message: 14086

Everyone on this list seems to know about This Miracle.
I don't.

A few questions. Please help.

1. What makes it so special ? ( the lack of low, the 10 db high boost and/or the head phase shift ? )
2. Will I also get rid of the compressor's background noise ( I now use Yaesu's native HM42B ( no baffle inside....! ) with an unappreciated orchestra on the background....( compressor in the menu is default, so not too high ).
3. In Europe I must pay abt USD 290 for a Pro Set Plus 'ic'. Is it worth that lot of bucks ? I must

Thanks.

Hi Chas... This is Jim AD6DW and ,I want to thank you for your help in the problem I had with my FT 100. When I put that AM filter in, I bent one of those tiny leads in the strap coming from the lower board to the top board, the one that runs through a shield of sorts, and that was the reason it would not transmit on HF. I took a small exacto knife and very gently bent it back into position. Put every thing back together and WALA the sukeh works. Thanks so much for your help in this mater. Folks like you are what ham radio is all about. 73 de AD6DW. Jim

# 14093. CAT

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-11 04:00:24 UTC
From: Eric van de Weyer
Topic: 1966  Message: 14093

Hi everyone,

I have a little question.

Has anyone had any problems with using the CAT connection to the 100D?

I got one of John Hanson's (W2FS) QSYer keyboard kits and built it up.

When I first plugged it in to the FT100D to try it before putting it in the box, it worked just fine. After I had installed it in it's box, however, it wouldn't work any more. I have since tried it on a friend's FT817 and it works just fine so I am assuming that something has gone wrong with the interface inside the radio.

Have tried to find it on the schematics but as yet I haven't been able to locate the Band Data pigtail connection or where it connects to. May have to pull the radio out of the car to try and trace it.

Any ideas or experiences would be appreciated.

73....Eric VK2KUR

# 14094. Re: AM filter part number

Hey no sweat Jim - glad it worked out for you. It's about 9:25 PM
and if you read this try calling on LSB on about 7.154 MHz. I'm
listening there and around 7040 CW. The band is in pretty good shape
and the path between Hanford and the Bay Area should be OK - good
enough to try AM. Hope to hear your rig.

A couple of the measurements are a little more than the 100D. Other than that, it'll sell well because it's new and some folks just gotta have it because of that. But, if they included the fan, mic & swr mods, that'd be a good reason to consider it.

Basic questions:

Have you reset the data rate on the QSY'er to 4800 baud? Have you reset to
FT-100 mode?

**4800
**100

Depending on your version, it might work after those keystrokes are entered.

Here is some guy's prediction on the 100D and new 897.

Frank K6FCW

---

The only info I got from resellers in UK and Germany is
that it will appear this summer ( 2002 ).
The rig is supposed for fill the gap after FT-900.
So FT817 and FT-100 will stay.

FT-817 for QRP
Ft-100 for mobile ( remember it has the detach head )
FT-897 for multipurpose

That picture is old, and BTW the rig is kinda "fugly". That pic came from a show in Japan and was the prototype. I bet it has been refaced since then... At least I hope.. Regards.. Richy N2ZD

# 14101. CW filter woes

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-12 02:30:47 UTC
From: KENNETH ROBERT MCGUIRE
Topic: 14101  Message: 14101

I tried to install XF-117C in my FT-100 (NO D). While the radio still works after the installation, there is almost no signal when the cw filter is selected. Does anyone have any experience with this type of problem, or do I just have to go in there and look for solder bridges...

For everybody's info, AES has the 500 Hz filter available for rather cheap...

From: John Hansen
Topic: 1966  Message: 14105

I believe Eric has one of the earlier models that does not change speeds. It is locked at 4800, which should be the correct speed for the FT-100. On the newer versions where it does change speeds, the command to do so is **480

I have had one report from someone else with a problem similar to Eric's. In that case, the problem was not the CAT interface inside the radio, since a CT-62 worked. I sent this fellow a new chip for his keypad and so far, I've not heard back as to whether that resolved the issue. Since I don't own an FT-100, it has been difficult to chase this down, but Pres has had the unit working with his FT-100 without problem.

Eric, I'd like to suggest that we start by having me send you a new chip for the keypad. There aren't a lot of changes between the one you have and the new one (the ability to change speeds is the main one) but at least we will then know for sure that you are operating with the same chip that is working with Pres's FT-100. Drop me a private e-mail with your address and I'll get one out to you. In the meantime, I would love to hear from others about your experiences with the keypad and the FT-100.

Finally, I should note that the reason that I added the ability to change baud rates is that someone with an 817 wanted to use the keypad with his One Touch Tuner (OTT). Apparently the OTT is permanently configured for 9600 baud. That user found that the keypad coexisted well with the OTT (when it was set to 9600 baud) and that he was able to use both accessories at the same time without modifying either of them. If you received one of the early keypads that does not support speed changes, but would like one that does, I'll be willing to send you an upgrade chip for free, if you like. Contact me privately off the list.

Betreff: [FT100] Re: Does anybody know how the BM-10 Heil-Headset sounds
on this little baby???!!

Chris:
I use the Heil BM-5, a HC5 element on my FT-100 mobile and love
it. I get very good audio reports and with the VOX, I can keep both
hands on the steering wheel. I made a 4 inch pig-tail and double
female connector so I can switch mic's if I want to without removing
the front panel from the body of the rig.
Hope this helps a little bit.
73's, John K2GVP

I am using the minidin version from buxco. it uses the dataport rather
than the mic jack. This way, you don't have to disconnect and reconnect
the mic when playing with digital modes.

Downloading the manuals is OK BUT.... The big problem with MFJ manuals is they seem to be afraid to include the schematic of the device the manual is for. Even for simple things like ant tuners. If you have any problem you have to trace out the circuit yourself. For some reason they seem to think either the circuit diagram is not important, or it is a big secret! They tell you all about how o use it and forget that most of us are able to diagnose and repair the majority of problems but without the circuit diagram, the problem doubles! Just my thought.

Here is a link I found to download free manuals for every MFJ &
Ameritron product listed of which currently there are over 200
product mnauals total available and more coming.

All Ameritron amps are also listed with free manuals
There are separate links for MFJ and Ameritron at this URL.

I don't know... this deosn't make sense to me... the Ft100 is $790, the 847 is $1150, this looks like an 847 without satellite functions, the display looks smaller than the 100D... I thought the FT-100D filled the gap of the Ft-900? I can't figure out how this is going to be placed against the other rigs... does it replace something, does it fill a gap? I guess a discussion better left for the FT-897 group.

Hi there everybody:

This Omar, YK1AO.

I have troubles with a FT-One transceiver and an Alpha 89 Linear amplifier.

Is anybody there familiar with one or both of these equipment? I would appreciate it if I can get a response.

Best 73

Omar, YK1AO

Dear fellas,

Have just mounted my ATAS and screwed it on whilst turning the lower 3" as I remember someone saying not to turn it from a higher position.

My question is my ATAS wobbles above the lower 3" point, not much, but enough to be concerned is this normal?

Thanks

when you select the cw filter the noise level will drop, find a cw sig
while in SSB then select CW and you will have to fine tune to get the
incoming cw in and a the tone you are use to.

To me, it might fill a gap if it has a built-in antenna tuner. Does anyone know if it does or not? (Also might justify it being a little larger.)

From: john BUNKER
Topic: 14115  Message: 14123

The FT-100 works great on psk mode, I went to radio shack and got the min din plug and a 4 phono jack board and wired the two data outs and ptt and afsk in., then I made my own interface unit from radio shack transformers installed two pots and mounted them in a minibox. Using this setup I can adj. the TX and RX levels with out going back into the comp. sound card. Using DIGIPAN Software and cutting transmit level on FT-100 to 40 Watts really does the trick. But using the TX pot on the interface I can just tweek it so my ALC just barely indicates a level, there for not transmitting a wide signal. The other pot for receive level is handy because I can adj. the level going into the receiver and not overdrive it.

I am using the minidin version from buxco. it uses the dataport rather
than the mic jack. This way, you don't have to disconnect and reconnect
the mic when playing with digital modes.

Hello Chris,
Yes I have use the BM-10 with the HC-5 element on my FT-100 and it works GREAT. I did have to adjust the audio DSP settings to get the audio I wanted but it was not a problem. I drive a 2001 Honda Civic LX with a 5 speed and the head set with the push to talk or VOX is great while shifting gears. Hope information is helpful.

Subject: [FT100] Does anybody know how the BM-10 Heil-Headset sounds on this little baby???!!

Hi to all on the list!
Has anybody made an experience with a Heil-Headset like the BM-10 with
an HC4 on the FT100????
I am seriously thinking of buying one for mine, as I always wanted to
make "Vox" operation, but I haven't got a radio in the past which was
able to do it...

I visited Bob Heil´s site and made the sound comparisons between the HC5
and the HC4... I think I go for the HC4 "DX dream machine".... :-))))

I hope it will make my little "baby" scream hihi!!!

Greetings to all and have a nice weekend...

BTW I am on air tomorrow morning (8.00 CET) on 10 & 20m SSB & CW....
If you hear me callin´ try to come back to me....
Hope condx will be better than the last days...

OE5CSP Chris

# 14127. ATAS-100 Mounting Issues

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-13 12:57:52 UTC
From: Raja Chatterjee
Topic: 14127  Message: 14127

Howdy all-
I'm looking at various ways to mount my ATAS-100 on my GMC Sonoma Pickup.
Due to frequent parking-garage entrance, the best place to mount for me is
the back bumper.
One of my buddies here suggested that the ATAS would not tune up if I placed
it so low on the vehicle. Any suggestions?

# 14129. Re: [FT100] ATAS Wobble or not to wobble is the question?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-13 12:59:45 UTC
From: j.essica
Topic: 14120  Message: 14129

Mine dosen't, and I only take normal care when mounting and unmounting the thing. It has to be tight on the mount or it will ( no shall ) wobble and the earth connection may be compromised.

I suppose it depends upon how paranoid you are. A wobble is eventual wear and tear but that said with something which is designed to move there is bound to be a bearing surface and some gap (however minute - or it would need a very big motor to shift it) and wobbling is bound to be felt.

Only you know how much force you are applying. Can you actually see the movement? If you can then I would suggest it is too much - if you can't then I would suggest it isn't.

For what it is worth that is my h'pennies worth.

Based on your description, I would slide up that bottom rubber ring (just above the bottom three inches) and tighten the three screws underneath it. See if that helps.

From: radiotube321
Topic: 14115  Message: 14131

I highly disagree with that. If you don't use a 1K to 8 ohm transformer for the soundcard input, the FT-100's 10Kohm output impeadance on the ADSK pin 5 will not be enough to drive any soundcard's mic or line level input fully. You need to use at least the 8-1000 transformer to lower the impeadance so that more power is transfered to the sound card's microphone amp.

# 14132. New FT-100 @ Dayton??

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-13 16:45:30 UTC
From: radiotube321
Topic: 14132  Message: 14132

Does anybody know if there is going to be a better FT-100 or something similar announced at Dayton this week? I just bought an FT-100D last weekend, and I'm wondering if the price is going to go down further...

# 14133. Re: CW filter woes

Yahoo group: FT100 (2002-01 — 2002-06)

From: backhoefade
Topic: 14101  Message: 14133

It should have that typical "hollow" sort of sound when you select
the filter, in the absence of signals. The mid-band insertion loss
of the narrow filter is about 0 dB so you should hear signals if
they're present.

Try these steps:

1) Set the rig to CW mode.
2) Select the 2.4 kHz filter in the filter selection menu.
3) Tune in a fairly strong CW signal.
4) Switch to the CW 500 Hz filter.
5) Slightly re-tune the freq for peak response.

If you cannot hear the signal after switching to the 500 Hz filter
then you either a) don't have the filter properly soldered in.
(i.e. wrong physical filter position or bad
solder connection)
b) don't have the menu selection options set up
correctly.
c) Have a bad filter (very unlikely).
d) very unlikely forth consideration but worth a
look is to goto menu item 50 (I think it's 50)
and set the CW offset to 700 Hz if it's not
already there. This would only be an issue if it
was set to 400 Hz, and even then, that shouldn't
keep you from hearing signals; they will just
peak at 400 Hz through the CW filter. Set it for
700 Hz.

Somewhat separate from this but related; here's an operating hint for
the FT-100(D). Select the "CW" mode or the "CW-R" mode depending on
whether the band is generally LSB or USB so that when you switch
between SSB mode and CW mode you still hear the desired signal. If
you set it up wrong then when you tune in a CW signal while in the
SSB mode and then switch to CW mode you will no longer hear the
signal because the receiver's local oscillator will change in
frequency to permit you to hear the alternate image frequency. You
don't want to have to retune just because you changed modes. You'll
know you have the correct "CW" versus "CW-R" selection when you can
still copy the signal after you switch from SSB to CW.

Let me know what you find with the CW filter install issue.

I have only heard that the FT-100D will continue on.
I think the prices are down along with the stock market and just about everything else. Turns out Ham radio is definitely NOT a 'rich man's hobby"; it's prices are very much subject to the state of the economy (Unlike the high-end yacht market). This is what the HRO manager told me. It's a buyer's market for certain right now. I saw the new FT-100D's for $789 at HRO. I won't say what I paid but it was well in excess of a kilobuck about 18 months ago. Also saw the FT-50r for $189. It's bizarre to go to the flea markets and see used stuff they're trying to sell for more than the price of new, better rigs. It's just a downturn. I remember during the 'dot-com' peak when VX-5R's were well over 300 bucks and FT-100D's were $1200. Enjoy it while it last cuz what goes down must go up.

From: radiotube321
Topic: 14132  Message: 14135

I purchased an FT-100D this weekend, only to open it up and find out
that the top metal case is not flush with the front of the radio on
one corner (about 1cm behind where the front panel slides on).

Has anybody else noticed this? I think I should take it back and get
a new one.... I'm surprised it got passed Yaesu's quality check.

# 14136. ATAS "motor mount"

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-13 17:59:50 UTC
From: randy_l_anderson
Topic: 14136  Message: 14136

Has anyone found a motorized antenna mount that will work with the ATAS antenna (similar to the Diamond K9000LRM)?

I think I can find away around the grounding issue, but the Diamond one is not rated for an antenna the size of the ATAS either.

Suggestions?

Thanks,

Randy

I respectfully disagree about the ups and downs of the ham rig prices. I feel that what we are seeing mirrors what happens in other electronic fields...the new equipment is released at a certain price point and goes down from there. Something will come along, sooner or later, to replace the FT-100 at the $1300 price point. The VX-7 HT is in place where the VX-5 started, at about $380. The ICOM 746PRO comes in where the original 746 began, at about $1800. The same thing happens with computers, VCRs, car stereos, etc. You'll get more features with each generation at a given price, and prices for the established technology will fall (as long as it is available.)
HOWEVER, this is not to say that PERFORMANCE will necessarily increase, but the list of features will.

Topic: 14132  Message: 14138

I had the same complaint with mine I bought about 18 months ago. Don't sweat it. When I took my rig apart to install the AM filter I had the opportunity to take a permanent ink marker and touch up the tiny bit of exposed metal. Once I 'painted' it black I never even noticed it again. You're going to love that little rig. Consider it a birthmark on your newborn.

I would be more interested to find out if yours has the spurious oscillation mod. You can tell by removing the top cover and checking if they installed some ground straps that are literally screwed into the horizontal chassis rib. You can check for the second important mod which is a temperature sensitive switch mounted on top of one of the VHF/UHF PA devices. You access that by removing the bottom of the cabinet. Without that 'fan mod' the fans won't run during extended VHF/UHF receiving which tends to heat the rig up - not a good thing.

Don't get frustrated with the FT-100D. It may need the two mods added but once they're done, it's a solid rig. I strongly suggest you also do the "N2ZD" mic mod. It will result in excellent transmit audio. The stock mic sounds a bit muffled due to a plastic "noise cancelling" baffle that's in front of the mic element.
That mic mod is at this website and also at http://www.mods.dk
There are some hints there on AM operation also. Enjoy the rig. The receiver is excellent and the transmit audio is too, once you mod the mic.

You're probably right. It just seems like the prices really came down hard in the last year. I'm serious about what the HRO manager said when I commented on the prices. He said "it's the economy". At least the product cycle is slower than PCs. Boy I'll tell ya - within a few weeks it seems like the computer you buy is outdown by the next generation - although that's slowing down now. Who needs a 2 GHz processor other the the 13 year old gamer and the video editing guy? For the most part you can surf the web, pay your bills and send E-mail with a Pentium 80 MHz, even a 486 in a pinch.

I wouldn't worry about the case being off a bit, so is mine and so are others that I have seen. I would check to see if the fan works in VHF/UHF rx and if the grounding straps are attached to the center spar of the radios chassis.

Last time we went to Cabo the only thing we caught was a catagory 1 hurricane. A day earlier we watched someone come in with a nice Marlin and some Dorado. Just like DXing, you gotta hit the condx when they're right.

# 14144. Re: ATAS-100 Mounting Issues

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-14 03:41:51 UTC
From: am_fm_radio
Topic: 14127  Message: 14144

Look at my photo's (photo section 2002 GMC truck W8LM) of my mounting ham sticks on the big brother of your truck. I have been using that same ball mount on a '86 and '93 S-10...It can be "sandwiched" between the pickup bed and a cap or tonneau cover. With today's mounts, if your so inclined to buy over the counter. I bet one of those "hatchback" mounts will attach to the inner lip of the bedrail, and adjust so the antenna points up. With my mounts located over the drivers side tail light, a 20 meter hamstick will tune the entire 20 meter band without retuning the antenna. It's a great place to put a lowband antenna...keeps the RF far from the occupants.

Hi Pres,

thanks for the reply however I have tried that. That was my first thing. the point was that it all worked perfectly the first time I tried it but then wouldn't work after that and the keyboard worked fine with a friend's 817. I also have a reply from John Hanson as well which I am about to reply to.

Basic questions:

Have you reset the data rate on the QSY'er to 4800 baud? Have you reset to FT-100 mode?

**4800
**100

Depending on your version, it might work after those keystrokes are entered.

Thanks

From: Eric van de Weyer
Topic: 1966  Message: 14148

Hi John,

Thanks for the reply.

I did try the things that Pres suggested first up but to no avail.

The thing is that when I first tested it, before doing the final mount in the box, it worked fine and I was very impressed with it.

After I finished mounting it, I tried it again and it wouldn't work any more. At first I thought that I'd maybe pulled a wire off, or something but everything looked OK.

I connected the output of the keyboard to a 'scope and it looked OK with nice 5V square waves each time I presses the # key.

I also hooked it up to a mate's FT817 and it worked perfectly with it so that is why I suspect that there is a problem with the CAT input on my radio.

I have had a look at the circuit to see where the interface goes to but, as yet, I haven't found it. The only thing that I can think of is that unplugging the lead from the keyboard, which would have briefly shorted the interface to ground, may have done some damage, although I wouldn't have thought it would. As I said, when I tested it on the 817, everything still worked OK.

I therefore really believe that the problem is not in the keyboard but is in the radio. I don't know much about the CAT interfacing although I am fairly familiar with computer interfacing in general having worked as a tech for many years.

I will keep your offer of a replacement chip in mind, John, but will explore other avenues before subjecting you to the expense as I don't think that that will fix the problem.

Unfortunately, I don't have anything else I can try into the interface to prove it once and for all.

Subject: Re: [FT100] CAT

I believe Eric has one of the earlier models that does not change speeds. It is locked at 4800, which should be the correct speed for the FT-100. On the newer versions where it does change speeds, the command to do so is **480

I have had one report from someone else with a problem similar to Eric's. In that case, the problem was not the CAT interface inside the radio, since a CT-62 worked. I sent this fellow a new chip for his keypad and so far, I've not heard back as to whether that resolved the issue. Since I don't own an FT-100, it has been difficult to chase this down, but Pres has had the unit working with his FT-100 without problem.

Eric, I'd like to suggest that we start by having me send you a new chip for the keypad. There aren't a lot of changes between the one you have and
the new one (the ability to change speeds is the main one) but at least we will then know for sure that you are operating with the same chip that is working with Pres's FT-100. Drop me a private e-mail with your address and
I'll get one out to you. In the meantime, I would love to hear from others
about your experiences with the keypad and the FT-100.

Finally, I should note that the reason that I added the ability to change baud rates is that someone with an 817 wanted to use the keypad with his One Touch Tuner (OTT). Apparently the OTT is permanently configured for 9600 baud. That user found that the keypad coexisted well with the OTT (when it was set to 9600 baud) and that he was able to use both accessories
at the same time without modifying either of them. If you received one of the early keypads that does not support speed changes, but would like one that does, I'll be willing to send you an upgrade chip for free, if you like. Contact me privately off the list.

Thanks for the info. Because I enter a garage at work every day, my overhead clearance is 7'. In order to get the ATAS to clear, I need to get the base of the ATAS as low as possible. A bumper mount will be ok for clearance, but my concern is that the antenna will be too close to metal and detune. I'm looking for anyone who's mounted the ATAS bumper mount or hitch-mount style and what their experience has been.

Thanks to everyone for a very active list that I'm learning a lot from.

# 14150. Re: [FT100] ATAS "motor mount"

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-14 14:34:24 UTC
From: David F. Morse
Topic: 14136  Message: 14150

---
Randy; I'm working on it! I have used the K9000 and it does work. One has to build a special mtg bracket for the motor. The K9000 holds up while driving around town but on the highway, 60mph, the ATAS100 won't stay in the vertical position, wind drag pulls it back to abt 45 degrees. When I lower the antenna to horizontal, I have built a slot for the ATAS100 to drop into to stabilize same. The K9000 really is not strong enough, IMO, to handle 4x4 work; but it does work and looks cool, if ur into that stuff.

My new design is based on this gadget:
http://www.allelectronics.com/cgi-bin/category.cgi?category=400&item=DCM-178&type=store

This gear motor is a real piece of work. I'll be using some parts off the K9000 for this project (the right angle coax mount). The motor is USA and the gear drive is China, u need two sets of tools to take it apart. Right now I'm trying to figure out motor limit switches and mounting thereof.
So far, I have determined that the drive will rotate the antenna 90 degrees in about 3 to 5 seconds at 12vdc; which is too fast for me, but may have to do. There is no lack of power, I think it would flip my Landcruiser over if tied down to something solid, hi!

The multiyear depression in Japan and the past year's drop in the Yen value by over 13% are the main drivers of the price decreases. The only Japanese companies doing well are the automotives as they build and sell in the US. Toyota had record profits this year.

Take last year's prices and drop them by 13% and see what you get.

# 14152. Soundcard interface for PSK31

From: William Joseph Crossland
Topic: 14152  Message: 14152

Hi Justin,
Have a look at www.qsl.net/soundcardpacket/ for a heap of good info on soundcard interface building. The site deals with Packet using the soundcard but the interface is the same for PSK31.

Also look at www.packetradio.com/00rascal/R-FTMDIN.gif
for a drawing of a commercial interface.

I think that the data socket is the way to go. I am going away for a couple of weeks but on my return I will also be building one for both Packet and PSK31 (on VHF, not sure how that will go).

From: kg4qqx
Topic: 14146  Message: 14153

I bought my FT-100D in February (manufactured in July of 2001 according to the serial number) and recently contacted the factory regarding excessive heat on VHF/UHF, as well as to inquire on the SWR Mod. They indicated that they only do the modifications on request as "many radios never need them". After trolling this site it seems obvious to me that all the radios need the mods done it's just that some folks don't have it done or, as in one case I read about recently, they don't experience problems until it's beyond the warrantee period after which it can be very costly particularly if it's caused catastrophic failure in one form or another....

Personally I'll be sending mine in after field day as their turn around time was quoted as 4 to 5 weeks (being a cynic, I suspect that it is likely more rather than less).

I saw a couple posts that suggested that units manufactured after about June 2001 have the proper screwed in ground strap which addresses the spurious oscillation issue. You can tell if you have that mod by checking under the top cover to see if the strap is screwed into the horizontal chassis rib. Some people have attempted the mod themselves but I don't recommend it since you will void the warranty. The date codes are misleading so it seems that the only way to know if you have the spurious mod is to open the top.

The second mod which permits the fans to turn on automatically during long receive only periods on VHF/UHF operation requires a return to the service center if you want the "factory" fix which is the addition of a temperature sensitive switch to the PA device. An alternative that a lot of people seem happy with is to add a resistor to the fan circuit that keeps it spinning during receive. I experimented with values and found that a reasonable trade-off for noise was around 180 Ohms. But I would recommend sending the rig in for the "factory" fan mod. I did the "factory" mod.

As far as the percentage of FT-100Ds that have needed the spurious mod check out the Polls section of this website.

My FT-100D was manufactured in October 2001 and it had neither mod. I did the mic mod and the fan mod (51 ohm resistor) and it works great. The fan is no louder than the HF side and the only reason you can hear it at all is because the VHF/UHF bands are squelched and no noise coming from the rx. Since adding the resistor it runs much cooler, but it was never so hot that I couldn't touch it as some folks claimed theirs were.

Just want to give my 5 cents to this topic...

My FT100D was built in December 2001, the mods have been done...
So If anyone wants to buy this GREAT LITTLE RIG (I really love it,
besides my girlfriend its Nr. 2 hehehehehe!!!) just remember to ask the
dealer to sell a FT100D in a box with a BIG GREEN DOT on it!!

This is the sign that all the mods have been done lately in the firm....
If you want to be at 100% just check the serialnr also.....

BTW my fan runs on VHF/UHF all the time.... So you can always touch the
top cover of the radio without burning your hands....

I am not employed at YAESU...
BUT I MUST SAY: HEY BOYS OUT THERE NO MATTER IF YOU ARE JUST ON VHF/UHF
OR HF, GET THIS RIG!!!!!!!!!!!!!!!
YOU WILL NOT FIND A BETTER ONE RIGHT NOW....(Forget "ICUM"....Alinco
DX70....TS50...tried them all... but never had such good reports on
TX/RX as on the FT100D!!)

The only thing I still want for this SUPER MOBILE RIG is the ATAS100 &
the BM-10 Heil headset... I think I have to go shopping next month ...
:-)))

Greetings to all
Chris OE5CSP

No, they don't come with the fan mod. Yaesu doesn't
think the FT-100D really needs it... All I can say is,
that in 6 hours of UHF or VHF receive without a single
transmit, the unit gets warm.

works great. The fan is no louder than the HF side and the only
reason you can hear it at all is because the VHF/UHF bands are
squelched and no noise coming from the rx. Since adding the resistor
it runs much cooler, but it was never so hot that I couldn't touch it
as some folks claimed theirs were.

# 14161. Warm operation on VHF/UHF

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-14 18:50:53 UTC
From: backhoefade
Topic: 14146  Message: 14161

I will never understand their attitude about the heat build-up during long receive periods on VHF/UHF. I have read several reports of loss of receiver sensitivity due to this so how can that be OK? Also, by my experience you want to design for cool operation in order to extend component life. So here is a case where Yaesu is being very "un-cool"!

# 14162. Re: [FT100] SWR and Fan Mod on FT-100D

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-14 19:06:29 UTC
From: Dick Thompson
Topic: 14146  Message: 14162

Ray, there is a very simple solution to the heat problem. I got it from someone else on this reflector, but it works. I, like the person who gave me the idea, didn't want to do any soldering inside my FT-100D before the warranty period had expired. So, I took a 51 ohn resistor, cut one side of the lead a little and firmly (I emphasize "firmly") inserted the end into the back wire connector from one of the fans that is plugged into the circuit board. It doesn't make any difference which fan you choose. The other end, I left it long enough to reach the hole where the top of the rig screws down to the rib of the chassis on top. I formed a small loop in the end of the wire and cut off the excess and made sure that when I replaced the screw in the center that the small loop was directly under the hole in the top of the cabinet. When I screwed it down it held in place. (I added a piece of electrical tape to keep the resistor from touching any other critical circuits inside. When I leave my 100D on VHF/UHF receive, it stays as cool as can be. Virtually no heat. I have not done the SWR mod, as I have yet to have a high swr problem. I also did the mic mod and removed the baffle inside the mike and pushed a sewing needle through the closed hole. It made a big difference.

The above fan mod is very simple to do and requires no soldering.

Good luck.

73,

Dick

No, they don't come with the fan mod. Yaesu doesn't
think the FT-100D really needs it... All I can say is,
that in 6 hours of UHF or VHF receive without a single
transmit, the unit gets warm.

# 14163. Re: [FT100] Re: SWR and Fan Mod on FT-100D

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-14 19:08:21 UTC
From: Dick Thompson
Topic: 14146  Message: 14163

No, I only did the fan and mic mod. I've not had any problem with the high swr icon popping up. I don't like the idea of drilling a hole in the chassis rib and putting a screw though it. Especially since it is still under warranty.

Did you do the spurious oscillation mod? You mentioned that you did
both mods but then only talked about the mic mod and fan mod.

David:

Interesting. Good to hear your feedback on the K9000 option. It won't due for me given what you found, as I will be mounting it on a 4x4 as well. Its interesting the brake on your gear motor is 24V and the motor itself is 12V?? I may go the route of building something as well but I really have enough projects, if you know what I mean.

I would be interested in an update when you get something running.

Thanks for the info,

Randy

Dear Bill

You were right!

All three screws were loose. Loose that is hanging out 2-3mm.

In fact they even had the pinky/red loctight still on them.

This leads me to think the ATAS was assembled loosly and they forgot
to tighten the lower screws.

Yes the upper ones were tight against the washers.

So all you guys and girls out there running ATAS's check them befor
they wear a large hole in the outer tubing.

Thanks again Bill!

Everyone: On Wednesday nights at 9:00 PM EDT (01:00 UTC, Thursday
morning ),
the Triple States Radio Amateur Club (TSRAC) has an ALL MODE 6 meter net
on
50.150 MHz. Check in sequence is as follows: SSB, AM, FM*, and CW.
TSRAC
Headquarters is located near Wheeling, WV in grid EN90. Please point
your beams
toward Wheeling and attempt to check in. Everyone via any of the above
modes
is welcome.

*FM frequency is 51.150 MHz.

# 14167. FT-100 Finally!

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-15 02:22:47 UTC
From: n8uvq@juno.com
Topic: 14167  Message: 14167

My FT-100 returned from Yaesu's hospital, on 14-May-02. They received it on 23-March-02. That's a fifty-two day turn around. I requested that they
do all the mods and bring the transceiver up to specs. Here's what Yaesu replaced:

2 fittings #R0134490
1 thermal guard #N7090039
1 chip cap. #K22170219
2 FET MRF255 FT-920 #G3090120

Looks like they spent about two hours doing the repairs.

SWR problem appears corrected. On VHF/UHF bands, the fan cycles during receive. It does not constantly run, at a slow speed, as others have indicated.

You're doing better than me.

I sent mine in, UPS lost it for 2 weeks, now Yaesu has had it for an additional 2 weeks, and when I called to check on status all I got was "it arrived in damaged condition".

They don't know what the damage is since they evidently just hold it indefinitely items that arrive damaged. It was assigned it to a tech today and I hope to hear about it's status tomorrow. The guy I have been dealing with on the phone has been helpful, but quite absent minded (or possibly busy out of his mind).

I gave them my cell phone number since I'm leaving for a vacation weekend in Dayton, I hope to hear if I need to buy a shiny new one or not :-) I'd really be pissed if they tell me _next_ week it's totalled.

-Mike, off to Dayton!

I inadvertently sent a message about the TSRAC 6 meter net.
It doesn't exactly pertain to Yaesu, but the FT-100 has 6 meter
capability and that message was radio related. If you can, check
into the net.

As for the Reflector Police, please accept my apology.

Topic: 14146  Message: 14171

In addition to all of the posts dealing with the three mods, for my FT-100D installed in the mobile with the romote mount and cabling, I added a Radio Shack indoor/outdoor digital thermometer (on sale for around $12) and ran the outdoor sensor to the rig case and attached it with a nice 3" piece of electrical tape. Running the rig in the high desert, I figured I would add an extra measure of precaution to monitor the case temp this way. I still take the remote face inside during the real heat of the day to avoid any sm problems in the future.

# 14173. Warm operation on VHF/UHF

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-15 14:38:49 UTC
From: Bob Evans
Topic: 14146  Message: 14173

Try turning your supply voltage down a volt or so. I was getting "warm" operation on receive and the fan would occasionally kick on, so I decided to check the supply voltage. It was set to 14.6 volts. I think I cranked it up originally to get as much power out as possible...I came to my senses and turned it down to 12.5VDC. It now runs cooler and the fans never have to kick on in receive. I've never had to do the fan or SWR mod after two years of heavy operation. It is still a great rig!

I second this emotion. UPS has been really bad lately. Use them only for
something that CANNOT be broken.

The Yaesu fan mod does not have the fans running all the time -
someone must have been talking about the "resistor mod" approach.
So I assume you can see the ground straps screwed into the horizontal
chassis rib under the top cover? That's the proper spurious
oscillation mod. The MRF 255's are final amps so I guess you had
blown it up (probably due to the spurious oscillation). Now all you
have to do is the microphone mod and your transmit audio will be
superb. Check how to do it either here or at http://www.mods.dk
Highly recommended.
73 es enjoy your now rock solid FT-100D.

Well, if UPS breaks it and it arrives at the destination in that condition, then UPS should pay for a new one, provided it was insured for more than the standard $100 they provide. I can't envision anyone shipping anything of value by UPS and not insuring it for maximum value.

I bought my FT-100D in October 2001. It is serial numbered 1F.... and it
has the screw in the centre rib and a small jumper soldered from the rib to
a nearby RF connector. So it appears to have the SWR mod but the fan mod is
not done.

# 14182. Controlled experiments versus chaos

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-15 22:02:04 UTC
From: backhoefade
Topic: 14182  Message: 14182

I don't know about the rest of you but despite the hassles of learning about and correcting the design bugs in the FT-100D and the rather haphazard learning process for getting peak performance out of it for lack of complete information in the User's Manual, my overall FT-100D experience has been a good one. I'm comparing that process with some of the relatively chaotic experiences of product development in the engineering world; and some of my very distressing dealings with contractors and subcontractors on various projects such as home remodeling and additions. Good God - what a nightmare!!! So taken within the larger context of a cloud of half-out-of-control projects and processes, the FT-100D experience has had a constant thread of reason and direction, and not too many grand surprises. So after the ground strap is installed, and the mic is modified, and the fan temperature sensor is installed, and the realization of the "must have" of the 6 kHz filter for AM operation, and the learning about proper set up for good, clean AM operation and the etc, etc, etc, I can come home from work, sit down in front of the rig, switch it on and work the world with great audio reports on both SSB and AM. Heaven forbid the finals die on me in the next 2 or 3 years (doubtful though since the spurious oscillation has been addressed). Until that happens it will have been as dependable as heck and always a blast to operate.

N6AF Chas

# 14183. Re: SWR and Fan Mod on FT-100D

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-15 22:08:45 UTC
From: backhoefade
Topic: 14146  Message: 14183

You have the "SWR" mod. But sounds like Yaesu is still selling them without the fan mod that allows the fans to automatically turn on during long receive only periods on VHF/UHF operation. You have three choices:
1) Do nothing - in which case it will heat up during long VHF/UHF receive only periods which is not a good idea - some people report loss of receive sensitivity.
2) Send to Yaesu so they can install the temperature switch.
3) Install the resistor mod. You might try this first. Remember that it probably voids the warranty. If you follow the implementation that someone suggested here recently you don't even solder it in so you could remove it if you have to send it in during the warranty period without voiding your warranty. I had experimented and found a 180 Ohm value was good since the fans weren't too loud then. But I still had Yaesu do the mod.

# 14184. Just Exchanged for New FT-100D

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-15 22:40:29 UTC
From: radiotube321
Topic: 14184  Message: 14184

Just exchanged my FT-100D that had been in the store for 1.5 months for one that was delivered today to HRO. It was made in 2001, just like the previous guy in month L, which is October I believe. However, it is several production runs in advance of the previous....

Anyway, I noticed a slight difference:
The fans don't run always in HF receiving mode as they did on the old one. Previously, the fans ran continuously on HF but not on VHF or UHF. Apparently, the fans ONLY kick on if transmitting, or if the thermal sensor trips.

# 14185. Re: [FT100] low rx audio

I have never heard of an FT-100D whose fans run continuously on HF. (Except maybe for one in the old '57 Chevy at Devil's Golf Course in Death Valley, California on the 4th of July). The way I've always heard it is, on HF the fans will run when transmitting and for a few seconds after transmitting has stopped; and in receive mode when a certain temperature is sensed.

On VHF/UHF the fans only run when transmitting. In receive they will sit their quietly while the heatsink, the chassis, the whole darned rig slowly does a China Syndrome gig.

After the thermal switch is added (the "fan mod") then the fans will act the same during VHF/UHF receive as they do in HF receive.

Well, Chas, I hate to tell you this, but the fans on my FT-100D run continually on HF and they always have. When keyed they increase speed, hang in for a few seconds after the keying is released and then the fans go back to the slower speed. But they continue to run. Since adding the 51 ohm resistor, the fans run just like they have always done on HF, while in V/U mode for receive. Like the HF side they increase speed when keyed and decrease after a few seconds when PTT is released.

Chas,
I really don't consider a high temp threshhold or "shutdown temp" other than what is recommended in the manual (120 deg F??), just when the case is measuring very high temps (abt 110-120degF) I shut her down. Normally you should never have to operate this high a temp, but once I had my antenna go south on me and did not realize this until the temp had gone very high after a particulalary long duty cycle. I wasn't really watching the SWR, but I did catch it on the thermom display. The sensor is just taped to the top cover of the main unit. Came with about 6-8 ft. of remote wire for mounting, very handy for the price and looks nice on the dash. That's it, that's all. Back in my hole>

No, probably not. Mine did the exact same thing when I got it a few years ago. As far as I know, Yaesu is still not including the AM filters with the radio. It's a shame you need to buy a filter to use a mode that is built into the radio :-( You should buy the AM filter, as you will notice a huge difference in RX/TX! Though, without the filter, you WILL be able to receive and transmit, there is a night and day difference between having it and not having it. The cheapest I have seen it was $79 at Texas Towers.

hi jim,

well i was just concerned if using 2 100 ohm resisters
in parallel would present a current problem, but as i
recall from memory ( duh ) i think the current divides
entering the resistors then returns to same as entered
upon exit ..... i have read a resistor anywhere from
50 to 180 ohms to work..... but no one ever caculated
the rpm ......... oh heck, here we go, a new topic
.......rpm

The other question is how the FT-100 transmits on 11M out of the box!!!
For CB use I would say no need for the AM filter. For HF or 6M AM you do
need the filter.

# 14194. Has the SWR mod been done?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-16 06:13:11 UTC
From: Robin Alexander
Topic: 14194  Message: 14194

Hi,

After reading this group for a while and since my Radio is nearing the warranty date, I took a look to see if the SWR mod had been done. I can see some copper tape bonded to the ribbing of the case, but I'm still unsure if that's the mod. (I know the Fan Mod hasn't been done).

So I have taken some pictures and put them on my website. I'd appreciate it if those in the know would take a look and see if that's the mod, mine has a Sept 2000 build date :

The link is http://www.tartanlatte.com/rmalexander/Interests/Radio/ft100

Feel free to e-mail me direct so reduce traffic on the list.

Regards and thanks

Robin

Hi Robin... After looking at the photos of your rig, I would say that you have some mods to do, but don't worry as they are a lot of fun to do, and will make your ft100 last far longer. I couldn't tell if the fan mod had been done, but these mods are a piece of cake to do.As my wife USED to tell me... just go easy young man. hi hi. Good luck . 73 AD6DW Jim

Yes I understand that. My question was if the FT-100 was new as indicated in the original post how was it able to TX out of band without the mod? Simply removing a cover would prove if a filter was in place.

My comment about not needing to install a filter for CB AM transmit was a sarcastic comment, the filterless AM transmit is crap and that would be right at home for this use. Yes you can TX without the AM filter.

Doesn't look like it. Is there a screw holding that copper plate/tape
to the case in the middle? I don't see one. Compare against these:

# 14201. Re: Fan Mod on FT-100D

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-16 17:52:09 UTC
From: backhoefade
Topic: 14146  Message: 14201

The problem with using two 100 Ohms resistors in parallel instead of a single 50 Ohm resistor is that some of the electrons may hesitate briefly at the current division point. This "back-up" results in a slight increase in the effective resistance. Something to do with probability theory I guess. The more carefree ones just shoot right through, while the more "conserned ones" stall at the dividing point and try to make a logical decision. It's ridiculous. I say just go with the flow.

That copper tape garbage is a method Yaesu tried for a while but as it turns out given time and heat the conductivity of the tape will drop and the spurious oscillation (SWR gremlin) will rise up and bite you. So you need to have the screwed in ground strap mod to make it permanent.

Couldn't you just be sure that the directionof electron flow assures that it will be downhill. That speeds up the hesitation a little.

The problem with using two 100 Ohms resistors in parallel instead of a single 50 Ohm resistor is that some of the electrons may hesitate briefly at the current division point. This "back-up" results in a slight increase in the effective resistance. Something to do with probability theory I guess. The more carefree ones just shoot right through, while the more "conserned ones" stall at the dividing point and try to make a logical decision. It's ridiculous. I say just go with the flow.

Yep, to do that all you need to do is flip the little feet on the bottom
of the rig forward.

# 14206. Extended Transmit Mod??

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-16 23:16:50 UTC
From: w6zip
Topic: 14206  Message: 14206

I completed the extended transmit mod as outlined on this page as well as QRZ.com and then proceeded to follow the instructions on powering up the rig while holding the down and step keys.....nothing out ogf the ordinary happened. I repeated the steps several time and still no indications like those outlined in the very simple instructions. Anyone with any clues???
Thanks,
John W6ZIP

# 14207. Nix on Pirates & 11 Meter Mods

I don't know how many are following these questions about modifications for 11 Meters. It's been a looooong time since Amateurs had an allocation on 11 so I assume this is for illegal "freeband/pirate" use. I'm of the opinion that we should strongly discourage any conversations about this sort of thing. The Feds are interested in how licensed Ham behave themselves and they are smart enough to read the Internet. When a Ham assists others to do wrong they give all hams a black eye. So in short Stop Screwing around with these guys. These are the same folks we hear creeping up into the 10 and 12 meter bands and we should not lend them ANY support in anyway whatsoever.

Ditto!

I have one purchased this year, in march. It has
a 1H....

There is a screw, and a copper jumper, in addition
there are patches of copper attached to the top cover
in several places, including the two raised "fingers"
that hold the front of the top cover to the front of the
frame.

I do have a question though, does anybody have a
picture of the factory fan mod (temp switch on
the PA)?

From: box542
Topic: 14209  Message: 14209

Greetings!

Just received my FT-100 today from Yaesu.

Radio was sent in for the FAN & HI SWR mod. It was received on 2/26/02, sat until 4/26/02, and was completed on 4/30/02! Yaesu called me on May 3 to inform me the radio was completed and awaiting payment info. I called them on Monday, May 6, and they said it would ship on May 8.

My question... What the heck is the rotary encoder? On the Work Order, there's a comment by the Tech, that the ROTARY ENCODER on the display unit was replaced. Charge was $6.01 for the part. The mod(s) and a complete checkup was $76.01

I'll pull the bottom cover off later to see what was done!!

Don't forget about the molecular composition of the watchamacallit.
If this is out of phase, it might cause an electron to become
homeless! YOU NEVER WANT TO SEE A HOMELESS ELECTRON!

Sorry, couldn't help myself! :-)

Have to agree with Chas on this. My fans will run
when the transmitter is keyed on HF, but they will
slow, and shut down shortly after. I can see the
blades easily when they are stopped.

I haven't looked to see if the fans turn on if a certain
temperature is reached.

I have a 1H.... Serial number, and I bought the FT100D
recently. Apparently this is a change with newer models.

OK here is the point. How can we tell if the thermal
sensor has been installed, and works on HF, AND
VHF or UHF? It is true that my FT100D has fans
that turn off, on all frequencies. The big question is
if that certain temperature is reached, will they turn
on in receive, on all frequencies...

Hi Bruce,

the rotary encoder is how the main tuning dial interfaces with the radio. It probably consists of a disk with cut-outs which is rotated between a light source and some photocells, probably all IR. The pulses generated as the dial is rotated are fed to the processor which determines speed and direction of rotation.

# 14216. Re Fans an the FT-100

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-17 14:28:02 UTC
From: ve7baq
Topic: 14216  Message: 14216

I have a FT-100D serial number 9K.... The fans are OFF on HF until I either transmit or the rig is on for a while and reaches a certain temperature. In other words the fans are OFF when I first turn the rig on. After a while they start on slow speed even when just listening, even if I don't touch the PTT switch. Push the PTT switch and they run full speed, and then go back to slow speed after a few seconds. On VHF they only run when I push the PTT switch. I don't use VHF much, but I intend to add the resistor mod to the fans. It seems to make sense. The rig creates heat whether you are just listening on HF or VHF and those fans don't make much noise. The normal noise in the shack covers up the noise they make most of the time. Let's face it. If you want to be really honest about it, on slow speed you have to really listen to hear them and when you are transmitting your voice covers them up anyway. Anyway, it is comforting to know the air is passing through that small confined box we call our rig, there really isn't much space for it to circulate on it's own. Just a thought.

# 14217. Confusion with serial number

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-17 15:18:53 UTC
From: Markus.Homma@t-online.de
Topic: 14217  Message: 14217

Hi group,

after a long time without a FT-100 i decided to buy a brand new FT-100D
for portable use with a FC-20 i got used.
I read all the last info's about the radio and also the postings about the
serial numbers.
So i called some dealers here in germany and asked which serial number the
units have they sell.
And it is 9K1.......
That mean that the units are made in 1999??
I cannot believe that the FT-100D's here selled as brand new are made 3
years ago.
And whats about the mods?
So any idea?

73's

It's one of the photos in the ft100mods.zip file in the "Files"
section. There's even a close-up of the temperature sensitive switch
glued to the top of the final amp device. Just what you requested.

The Rotary Club of America (a philanthropical organization) has a
national repeater system that uses an odd-ball tone burst to enter
the system (1820 Hz). The Rotary Encoder allows you to access that
system.

Actually, that's the widgit that you spin when you tune the Freq knob.
So I guess they found it was bad. Good for you.

Look at the picture of the Yaesu fan mod in the Files section of this website. There's a close-up picture of it in the ft100mods.zip file. It's one of the "underside" pics.

# 14221. Re: Confusion with serial number

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-17 17:30:13 UTC
From: backhoefade
Topic: 14217  Message: 14221

I have mentioned several times that you can't rely on the date code.
It's "inaccurate".
If I were going to buy a new FT-100D through mail order I would just
bite the bullet and assume that I would be sending it in for the two
mods.
If I were buying it in a store I would ask permission to carefully
open the top and bottom of the chassis before I buy it to see if the
two mods are done. If I found that the spurious mod was done but not
the fan mod I might just buy it and install the fan resistor. If I
saw that neither mod was in there then I would probably send it to
the service center. The best case would be to have the store send it
but the couple of times I've discreetly mentioned the spurious mod at
our local retailer the guys there act like "what?? wow! really? I
didn't know there was an issue. No kidding?! Yaesu has a fix for a
problem in this model? Hmmmmm??? wow! thanks for the info."
So you might get lucky and get the store to send it in but in terms
of making sure the right words are written on the work order, etc,
it's probably safer to just buy the thing and send it in yourself.
So here's the sequence:
1) Pay the $800 or so.
2) Send in the rig for one to two months.
3) Get it back and enjoy it, knowing that you have the superior
receiver, compared to the alternative.
Myself, I would probably do this all over again rather than buy the
competition's rig.

that is correct my mod was done so the radio could be used for mars! However there is also something to be said for having a radio that is capapble of transmitting on the 11 meter band for emergency use? There alwasy a posibillity that you may need to use ch9 on the cb frequencies. And acording to the FCC In an emergency any frequency can be used if it is a bonified emergency.

That's right Robert.... I opened mine up for M.A.R.S right after I got it and, if these do-gooders on this site don't like it , they can kiss my rose red behind. I own a fleet of big rig construction trucks and, they all have cb radios in them and for a good reason. Two of my drivers are ham operators and are using the FT 100 in there rigs and use them both ways on occasion. So, I am getting sick and tired of all those do-gooders out there saying that all cb'ers are bad people. When my people get out of line on the radio I, let them know about it
Tune into 40 M. some time and listen to all the trash that goes down on that Freq.
OK, enough of me blowing my stack. Better go and have a cold Diet Pepsi and cool off. 73

Well, Tim, it's OK to agree with Chas. But my FT-100D has a 1L, so it's allegedly newer than yours. My fans run continually in HF and speed up when I hit the PTT or keyer. Since I made the fan mod, it does the same thing in VHF/UHF. Go figure. No consistency here.

Have to agree with Chas on this. My fans will run
when the transmitter is keyed on HF, but they will
slow, and shut down shortly after. I can see the
blades easily when they are stopped.

I haven't looked to see if the fans turn on if a certain
temperature is reached.

I have a 1H.... Serial number, and I bought the FT100D
recently. Apparently this is a change with newer models.

OK here is the point. How can we tell if the thermal
sensor has been installed, and works on HF, AND
VHF or UHF? It is true that my FT100D has fans
that turn off, on all frequencies. The big question is
if that certain temperature is reached, will they turn
on in receive, on all frequencies...

You should be ashamed! There is NO REASONABLE EXCUSE to transmit from a ham radio on 11 meters or any other "Un-Ham" frequency. The FT100 already has 12 bands and several modes on those bands that are legal for use. And I am sure that since you are an Extra class operator, you are able to use the full benefit of the FT100. Also how are these "Freeband truckers" getting these illegal radios to transmit at the 4 watt maximum limit allowed on 11 meters? If these wonder boys can buy an $900+ HF radio they can shurely afford $40-$60 more dollars for a legal CB. If there is no way to communicate in an emergency with the legal bands at your disposal, I doubt that being able to talk to sombody a 11 meter, 4 watt radio is going to be of much use. I am still mind boggled that people like you can make yourselves believe it is ok to "bend the law" using emergency communications as your crutch. I noticed you didnt include call signs for the freeband truckers, that was probaly smart on your part. But if I were you I wouldnt have associated my call with a post like that! You never know whos watching these groups, right Riley?

Still in disbelief,
KCØJAO

AB9EE and AD6DW are correct. I find nothing wrong with modifying a radio. Whether it be for M.A.R.S., C.B., or whatever. Now, don't think I am advocating the actual continuous use of the FT-100 (or any other radio for that matter) for everyday talking on C.B. or whatever other frequencies there may be. Like AB9EE mentioned earlier, it's always nice to have the C.B. band available and ready for use in emergencies. I actually modded my FT-100 for use on the C.B. band. No, not so I could wreak havoc on truck drivers on channel 19 with my massive 100 watts of output power (or is it 25 watts on A.M.? Can't remember), and no, not so I could go willy-nilly freebanding, pirating, swashbuckling or whatever you call it above channel 40 or below channel 1 on the C.B. radio. If I wanted to do that, I would buy me a Galaxy 44 or a Connex "Export" radio. I really think most of the amateur radio operators that modify radios for C.B. use, probably (hopefully) do not run above the maximum allowed output power of 4 watts, and do not operate above channel 40 or below channel 1. I know I do not.

Okay, about the emergency use of ham radios on C.B. frequencies. In my little automobile, I don't have room for many radios. So, instead of taking along my C.B. and FT-100, I only take along my FT-100 on road trips. I choose to only take along the FT-100 mainly to save space, and because it is much more fun to have available two meters, six meters, etc. So, when choosing between these two radios, the answer is pretty clear. When I travel and visit family, there is a turnpike I have to take-the Indian Nation Turnpike. Along this route I can hit a few repeaters, which is fun. The bad thing is, there are many miles in which I cannot hit any type of repeaters whatsoever. Not only that, but for many miles, my cellular phone never gets a signal either. Either there is not a signal or it just drops off. So, I am left without cell phone coverage, or repeater coverage for quite a while. There is also a large distance after you leave Antlers, Oklahoma, heading east towards Broken Bow, Oklahoma where repeater coverage is non existent (except in and around Antlers, this town actually does have a 2meter repeater.), and once again, Cellular phone coverage is quite spotty outside of this area. Guess who is available though? Truck drivers. It always seems like there is a truck driver on channel 19 (go figure, haha). Chances are, you could get in touch with one, and he or she might be able to help you somehow. Luckily, I have never had to use my amateur radio, cell phone, or C.B. radio for emergency use, and truly hope I never have to.
If a person uses a modified rig in emergencies only, that's okay (duh). The FCC says we can use any frequency for emergencies. Unfortunately, there are a few people out there that "abuse" the

bands, and run too much power or talk on the "freeband" frequencies. Hopefully, if they DO choose to talk on any of these frequencies, they do not interfere on these US Gov. frequencies. I can't remember exactly what frequencies above channel 40 and below channel 1 are allocated to the Fed. Gov. (and various other services), but I know some of them are. Thank you for letting me express my opinion on this.

Hi Jeff.... Seems as though you didn't read my post very close before you started to run your mouth.
The two drivers I have that have the Ft 100 are hams and they are both Extra class operators, not wonder boys and they can certainly afford a ft 100d, believe me . I know cause I pay them every week and they earn every penny of it. You can be in disbelief all you want, but if I want to turn my radio on to 11 M. and see what the drivers are doing and where they are, I will do just that. As far as posting the call's of those truckers ( not frebanders ) That is no bodies business but there's. One of the drivers has been in amateur radio before you were a gleam in your daddies eyes. So before you go making all kinds of accusations about my men being freebanders, you need to ask yourself a question or two. If you want to tell Riley H., feel free to do so. I am not breaking any rules and regs. in listening to the radio on 11 M. You need to get a life, get out of that one tree state and come out to Calif. where the men are men and the sheep are happy about that. 73's Jeff, and I hope this hasn't peed on your pant leg to much. 73 AD6DW Jim

>you wrote;;;I own a fleet of big rig construction trucks and, they all have cb radios in them and for a good reason. Two of my drivers are ham operators and are using the FT 100 in there rigs and use them both ways on occasion.****

You should be ashamed! There is NO REASONABLE EXCUSE to transmit from a ham radio on 11 meters or any other "Un-Ham" frequency. The FT100 already has 12 bands and several modes on those bands that are legal for use. And I am sure that since you are an Extra class operator, you are able to use the full benefit of the FT100. Also how are these "Freeband truckers" getting these illegal radios to transmit at the 4 watt maximum limit allowed on 11 meters? If these wonder boys can buy an $900+ HF radio they can shurely afford $40-$60 more dollars for a legal CB. If there is no way to communicate in an emergency with the legal bands at your disposal, I doubt that being able to talk to sombody a 11 meter, 4 watt radio is going to be of much use. I am still mind boggled that people like you can make yourselves believe it is ok to "bend the law" using emergency communications as your crutch. I noticed you didnt include call signs for the freeband truckers, that was probaly smart on your part. But if I were you I wouldnt have associated my call with a post like that! You never know whos watching these groups, right Riley?

Still in disbelief,

Ok, not to spoil a good knock
down drag out fight....

But,

Why not, (given all the FRS, GMRS, ETC.) have the
11 meter allocation given back to hams. License
everybody, self police, get all the truckers to get a
quick license, just like all those "quick license"
boater courses offered at the various regattas every
year.
This course of action would solve several
problems:

First - and foremost, it would add more room to
a band with decent skip characteristics, that does
NOT require a huge whip antenna, or a lotta bucks
for an antenna system. (Just great for FT100D's)
Second - It would allow us to unleash all those
who just love to track down annoying operators,
and "get'em"
Third - NUMBERS, we get a huge increase in
numbers of operators. This will stave off, at least
for a few years, the loss of any more bandwidth.

I'm sure we could think of a few more good
points. Besides, this bandwidth belonged to Hams
in the first place.

One of the first things I do to my radios is modify them for as wide a coverage (transmit and receive) as possible. I don't use them outside the amateur radio bands but it's nice to know I could in an emergency.
Also, all the vehicles I drive are capable of exceeding the posted speed limits by a large amount. It doesn't mean I will travel beyond those limits, although I do on rare occaisions. I imagine most of those people saying we shouldn't modify our radios also sometimes travel in their vehicles beyond the posted speed limits.
I have transmitted into a dummy load outside the amateur bands. The FT100 makes an excellent signal generator to do a basic go / nogo test on a receiver! It's easier to do this than get my HP 8920 test set out (it's very heavy).

great idea but back in the 70's all it took was a 5.00 and a piece of paper for a cb license and 80 percent of the people then didnt bother. and instead of enforcing any rules they just let it go. even people who had license's seldom used call sign's. why isnt it a law that you need to show your license to purchase a transmitter ?? I guess its just to hard to enforce rules when most stations are always moblie. Its kind of difficult to follow someone around to gather evidence.

Right.
I believe you...
still, given the different operating
characteristics, everyone who has
a radio like mine, needs to be sure
if the temperature sensor is working.

I sure could use a picture, or a description
of the sensor, and a clear explanation
of the difference between the a radio
WITH a sensor active on all bandwidths,
and a sensor, or sensorless equipped
radio that does NOT work on all bandwidths.

It couldn't hurt.

Tim,

I promised myself I wasn't going to get involved in this foray. But after reading your comments, I couldn't hold back.

You bring up an interesting theory. But, a you so naive as to think that the CBers and freebanders who are now operating illegally are going to all of a sudden become legally licensed? NOT!!!

They have no respect for the rules now. Why "dumb down" the amateur radio service any further? They are practically giving the license away as it is. Maybe the FCC could have an amnesty program and give a license to all those who turn themselves in for operating illegally wherever they want to. Then, lo and behold, they would be legal, and they'd still operate wherever they want to operate.

Interesting premise, Tim, but I doubt we'll see it in our lifetime. I sure hope I don't.

73,

Dick

That was when it became a public band. I remember.
I suggested it be given back to Hams. Different story.

> I guess its just to hard to enforce rules when most stations are
> always moblie. Its kind of difficult to follow someone around to

There is a whole crowd of Hams out there
who actually get up early on the weekends to
track the "rabbit". It would be a hoot, tracking
and IDing the stations. Instead of giving 'em
tickets, we hand out discount coupons for FT100D's,
and a "get out of jail" appearance ticket that can be
canceled by showing a license...
and a listing of "quick classes", of course.

It could be done.

Heh, heh, I certainly hope not.

I also don't think that the deer
will just walk out and jump in
front of your gun at the start of
hunting season.
It would ruin all the fun...
[grin]

> They have no respect for the rules now. Why "dumb down" the amateur
> radio service any further?

Dumb it down?
The forest isn't dumber if the deer don't show.
The FCC gets a few fines, we get some real
exercise... and the Hams add some numbers,
for those who get the message.

Our "service" is in danger of extinction.
We need numbers. The "dumb down"
thing didn't work back when it was first
proposed. Now in the age of Internet,
it is a joke.

> They are practically giving the license away as it is. Maybe the FCC

They don't need to. Ever go to a big
boat show? I have. The last Atlantic
City Boat show had record numbers.
The groups of boaters who attended
the "Ham License Talk" (AKA "quick
License") were your average people.

They needed a license to access the
ham capabilities of their broadband
boat radios, amongst other things. This is
just the type of people who will be
sucked in with an 11 Meter draft.
I have no problem with them if it means
we get more clout where it matters in the
Numbers Department.

As for the rest,
well...
it's "open season"
let's get out there and
hunt 'em down.

(Hang a few of those suckers over
my hood, take a few pictures, and
get a good nights sleep)

;-)
;-)
;-)

> Interesting premise, Tim, but I doubt we'll see it in our lifetime. I
> sure hope I don't.

You never know,
meanwhile I'll keep
polishing my tracking
antennas...
and dream of bagging one
of those 10 meter skippers,
a nice big one, suitable for
framing.

Ten Four good buddie! I do copy code QUITE well thank you, 30 wpm? NO PROBLEM! I got into Amatuer radio just because of CW. I have been SWL'ing CW for quite awhile before I got my ticket. I am sure he isnt using more than the needed power output to complete the contact on those air horns when he taps out these QSO's! I didnt mean to Poke a stick in the proverbial Hornets nest either. But, I still think there is no need to modify radios to 11 meters, If you are in that remote of an area, just wave those truckers over. Most of them (non-Hams) dont know what SWR is and cant get out more than a Mile or so anyway. They can see you before they can hear you. I work at a 2-way shop and I fix these "Muffed" antenna jobs every day. SO big shooter, keep the shiney side up and smokey off your tail!
P.S. dont worry about the Pee on my leg, my Grandpa had that problem too when he got excited!

It always seems like there is a truck driver on channel 19 (go figure, haha). Chances are, you could get in touch with one, and he or she might be able to help you somehow. Luckily, I have never had to use my amateur radio, cell phone, or C.B. radio for emergency use, and truly hope I never have to.
If a person uses a modified rig in emergencies only, that's okay (duh). The FCC says we can use any frequency for emergencies. ****

Adam I agree, in part, First one has to take into account that the "emergencies" the FCC refers to, are not flat tires or broken down cars. As all of us know, There are VERY FEW places on this planet that are "out of range", or that have "poor coverage" on the HF ham bands. If you cant raise someone on HF to help, you probably have a bad radio or antenna, and if thats the case, the freeband mods wont do you any better.
I am just amused at the amount of people that arent satisfied with the bands we have allocated to us. I should figure out how to take one of those DC to Daylight, continueous band, all mode scanners and make it transmit at 3000 watts. I bet I could sell a ton of these for "emergency use", but EVEN that wouldnt satisfy the "Free banders" though, they would still be pissed that they couldnt use EVERY satelite in orbit! I have monitored emergency traffic at Tornado ravaged locations, flood sites, The recent fires in Colorado, even some of the World Trade Center emergency traffic, I have NEVER heard any of them need to QSY to 11 meters or any other NON Ham band for that matter. Say what they will, there is NO EXCUSE to be out of band.
As far as MARS and CAP mods go, there is 150 modified radios out there for every 1 person that is legal to operate them.

Happy HF'ing!

This is shown in the FAQ linked to the 'Factory Modifications' explanation. There is a link in that text that points to:

http://k0lee.com/thermalmod.htm

This shows the thermal switch and describes the behavior of the radio before and after the mod on V/U and HF.

I know that it's difficult to restrain one's self when a hot button topic like CB radio has been pushed, but we try to keep the topics on this forum related to the FT100. If you notice that a topic has strayed off course and into a debate about some kind of general ham topic, please refrain from adding any more fuel to the fire.

On a related note, I think it's great when people can weave humor into their postings while offering some sage advice on matters related to the FT100. However, this isn't a forum set up for the purpose of showcasing one's comedic talents. If you get done writing some searingly witty posting and then realize that the *only* point of your posting is to allow others revel in your profound talent as a comic, then you probably should hit the delete key. Otherwise, someone with only half your comedic talent will respond, and then another with only half of his talent, and so on until we all feel quite tormented.

While I'm discussing humor, please remember that there's a fine line between humor and sarcasm. Sarcasm is defined as a cutting, often ironic remark intended to wound. So please let's keep the sarcasm to a minimum. It's pretty hard to use it without some of our 1900+ members feeling targeted by it.

No problem. 50 Ohms is 50 ohms. I used a 47 ohm myself, as that is what I was able to find. All it means is that the fan runs slightly faster than it would with a higher resistance. In the car, who cares?

Hi Byrddawg...I have just been jerking on Jeff's chain a bit. I to understand the R/R of amateur radio and try to adhere to all of them. I have never operated either of my Ft 100's out of band except for the M.A.R.S freq. , and that is very seldom done.
Two of my drivers have cb's and the Ft 100 in there rigs and use them both, but I have never heard either one of them on the 100's out of band. It is far too much trouble to do so , as you have to go into the menu and drop the modulation way down and, that is very hard to do in a big rig going down the road ( so to speak ). They use there cb radios.
I need to apologies to all the folks on this reflector for being a bit off topic and silly about cb vs. amateur radio. I apologize as well to Jefffeee out there in that truck stop working on those cb antennas.
Oh, and we have a bunch of trees out here on the left coast. Some of the red woods up in the high country are just a few years older than I am..... 73's , and remember ..its just a hobby, but a wonderful one at that. AD6DW Jim

# 14250. Pirate Mods & Repair a Success!

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-18 18:53:55 UTC
From: Jay Craswell
Topic: 14250  Message: 14250

Just to clarify my position. When people ask about mods specificly for 11 Meters I assume they are pirates. It's my opinion the folks helping this type of individual is NOT helping the Amateur Service to look good. And yes, Riley IS listening.

BTW: I think the comments about turning CB bands into Ham Bands and handing out new no test / code licenses to "save" Ham radio and comments about Sheep, how fast you can copy CW etc are all off the point and only make things worse. Do we want to assist others to break the law and help them invade our bands? How many of you took up the ARRL request to monitor 12 and the bottom of 10 meters? I heard a LOT of signals. All "freebander/Pirate/Lids." I for one won't help or stand silent while others assist this sort of rubbish. And those of you with two feet to stand on should not either.

Ok, since this is the FT-100 Forum let me say something more FT-100 related. I FIXED MINE!!! It was the one with almost no receive. I found the two 4.7 Ohm surface mount resisters in the DC:DC converter were smoked. Easy check if you have similar symptoms just see if you have -9V DC or not/ I replaced them with a 1/4 watt and it's all clicking along. I did a receive alignment and life is good. BTW on the failure I note there was no fan Mod. I had my first contacts (On 15 M SSB) and will be trying to hook up my J-36 Bug later tonight. *And NO I can't copy 30 WPM. Heck I don't know if I can SEND 30 WPM!!

Thanks, my unit does not have the
thermal switch, however, in the before
pictures there is a green capacitor,
while in the after pictures, there is a
standard yellow one. My unit has the
same yellow one, minus the bright red
lead covers (mine are clear.)

I could be wrong, but it seems that
the FT100D has a collection of mods,
almost at random. With no real
documentation, it would seem like there is
no consistency at all.

I think I'll try the resistor mod for a while.
Eventually I will send it back, you never
know what will be added.

The capacitor is the same value, just from a different manufacturer. The rig in that picture had its V/U final transistor replaced and they put a new cap on it because they had to unsolder the old one to get the transistor off.

> I could be wrong, but it seems that
> the FT100D has a collection of mods,

There has been an iterative approach on the fixing the SWR/grounding issue on the LPF board but it's stablized now. The thermal switch mod is done on request.

There is the 'green wire' mod where a signal is fed back from a buffer IC on the LPF board and through a resistor to one of the filter boards on the main unit. My rig doesn't have this mod and I'm not sure what it does.

Other than that, I don't know of any other factory mods.

Live-Wires,

Just back from Dayton. Feel free to post this to other groups.

Here is Budd, W3FF with his son, Chris [On the right] and another ham on
the left, at the Buddipole booth...
http://www.wireservices.com/n9zrt/dytn-02/budd1.jpg

And here is Budd alone, at the same booth, just hours ago...
http://www.wireservices.com/n9zrt/dytn-02/budd2.jpg

And, the biggest story out of Dayton is the uncovering of the FT-897. HF
+ 6 meters, 100 watts. Built in AC power supply and built in battery. My
son took these pics. I could not break free, I was at a booth...

http://www.wireservices.com/n9zrt/dytn-02/ft897a.jpg

On the other side of this unit, not shown is a carrying handle. Reports
are, super rig for portable, a bit heavy for backpacking...
http://www.wireservices.com/n9zrt/dytn-02/ft897b.jpg

Pass the word to other lists.

Steve,

How about using the SWR meter built into the FT-100. It will keep the clutter down in the car and it is free!

# 14264. Re: [FT100] FT-897 and new ATAS-120 at Dayton

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-19 21:45:43 UTC
From: lhlousek
Topic: 14264  Message: 14264

I just got back from Dayton.

I guess of most interest to this group is that Yaesu introduced a new ATAS, the ATAS-120. It's 20% faster than the
ATAS-100, has a rigid sliding coil cover instead of the bellows (similar to big screwdrivers), and a few minor cosmetic
differences. Chip Margelli said it is otherwise identical to the ATAS-100.

The FT-897 is better looking in person than in the photos (but not a lot). It looks like as if it is intended to have a
quasi-military/industrial appearance. Power is 100W through 6 meters, 50 on 2 meters and 20 on 70cm. There is a big
handle on the side and it can have either an internal power supply or two NiMH batteries installed. Size is 7.9 x 3.2 x
10.3 inches...much bigger and heftier than the FT100. Basic feature set look very similar to the FT100 except the front
panel is not removable and it has a CW training feature (???). Chip talked about using it mainly for field/portable ops
or as a manpack and said that he expects it to have performance similar to that of the FT100. Overall, nothing to get
too excited about unless you happen to be into that sort of thing.

They also showed a new FT8900R FM mobile with 50 Watts on 29/50/144 MHz and 30 on 430 MHz, dual RX, and full duplex
capable.

FT100Ds were $559 and ATAS-100s were $219 at the show.

Many hams in attendance were already sporting metalic VX-7s with their strobes flashing. Very chic.

>73....Eric VK2KUR

Hi Eric:

I was talking about our FCC (Federal Communications Commission) agent who has been doing enforcement. For a while it seemed like anything goes. Pirates, Jammers etc. No one did anything and it was getting pretty bad. Now along came Riley Hollingsworth (Spelxed Rite?) who started to revoke a few licenses and send a few hefty fines. Heck we even have some guys doing a few years in the lock up for jamming Police etc. Which in my opinion is a good thing. He is a Ham himself and has been known to get on the air and say "Cut this out" to some of the (so called) Nets which are pretty much dedicated to cursing each other out and jamming others. A hands on sort of guy.

From: frankweiss@aol.com
Topic: 14270  Message: 14271

Sorry, the info below got cut off in my last message. Here it is from someone at Dayton

Frank K6FCW

==

I have posted the data sheet Yaesu was handing out in Dayton (see the Files Section). After playing with it a little while, I think it is going to be yet another winner for the amateur community and Yaesu.

As already mentioned, Yaesu plans to start delivery in July in the US and the price is yet to be set. All they are saying is it is their best guess that the price will be in the $1000 to $1500 range. My guess is $1350.

This will be the first rig that will cover the new 5 MHz band. They held back introduction a little to get the FT-897 certified for this band too. This is in process I understand. Glad they are doing it.

And yes, it will receive on the WX frequencies!

There are sockets for both the CW and the SSB filters. Note that the brochure cites a 500-Hz Collins 12-pole CW filter. No way. It is the standard 7-pole filter. A similar error was on the FT-817 ads for a while citing a 10-pole CW filter. Yaesu quickly corrected it. The SSB is 2.3 kHz and is surely the standard 10-pole Collins filter. Both filters are FB.

The 897 holds to battery packs internally. Each is 4.7 Ah NiMH (my guess is that the packs use 4/3 C cells). You might note that there are BATT-A and BAT-B buttons on the front panels. This allows you to include one pack or two packs, and to select with one you want to use. You can also be using one while charging the other.

Instead of the battery pack(s), you may install an AC supply rather than using an external supply.

I didn't get an answer to an obvious question, which was if the FT-897 shuts down the high-power PA when operating on batteries and just used the driver PA. This would be like the K2-100 approach.

There will be a new antenna tuner designated FC-30 for use with the FT-897. I found out that it will also work with the FC-20.

The display offers a lot of colors to select from for various applications. You can designate a color to, say, a specific band-mode combination. You may do odd things like have signal strength be

related to color. Imagine a signal report of 4 by orange. ??? :-)

The DSP is audio.

Can hardly wait to have one of my own! It will fit nicely in between my FT-100D and FT-847 applications.

From: radiotube321
Topic: 14272  Message: 14272

When I hit VFO/MEM button to switch into memory bank 1 (MG1) I have a problem. After switching to memory mode, I attempt to change channels using the SELECT knob. The effect is that I can sometimes change a few channels, but it always jumps into MT (Memory Tune) even though I do nothing. I don't touch the dial, hit any buttons, etc. It simply jumps into MT while I'm trying to change to a distant memory slot using the select knob. At most, I can move by three or four slots before going into MT. Is there anyway to fix this?

You are in the mode which only displays the programmed memory channels.
Hit the step button and all should be ok

You forgot to list the options..

FTSTKR-01 Sticker for the top of the radio with address for return/repair.
FC20B New tuner that matches even worse than the FC-20
FTF-52 Vornado cooling (oscillating) fan option for VHF/UHF final
FTM-97 Muffled mic option
FTMU-11 Memory upgrade, now you can enter 1000 memories by hand instead of 300!
FTCT-987 Self install kit including copper tape and 5 ground straps.
FTFNL-22B Replacement UHF/VHF final board with include T-10 torx screwdriver and flip open replacement bottom cover for easy final replacement.
FTVB-10 Voice board with 10 of your favorite customer service sayings including:

1. Gee thats a new one on us!
2. Send it in for repair.
3. Sorry must be your antenna.
4. What final problem?
5. Never heard that one before..
6. You are the first to complain..

# 14278. RE: FT-100 back from Modsville!

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-20 16:21:43 UTC
From: emoxon@alum.mit.edu
Topic: 14209  Message: 14278

Hi Bruce.

There is also a rotary encoder behind the selector knob. It is basically a 2-pole switch utilizing metal-to-metal sliding contacts. The contacts can exhibit chatter (noise) during rotation, made worse with wear, oxidation, etc. as the part ages. The pulses from the encoder need interpretation, like Eric says, and when they're noisy things get confused. The result is that you don't get one proper selector step per detent. While you're turning it, It can appear that the selection is jumpy, or the knob goes backwards.

This has come up before on the reflector - folks have had it replaced or taken it apart and repaired it - so this may be what they took care of for you. The main dial isn't based on sliding metal contacts and should be inherently much more reliable.

Had you noticed any funny business with either?

remove some ground...

I have been trying to prove this theory of TOO MUCH GND. So far as many times as I prove it no one believes me that you can have too much ground. When you have all your grounds removed and it didn't fix it, then you may try shortening your ground lengths.

# 14280. PSK and Packet

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-20 17:48:16 UTC
From: ke2de
Topic: 14280  Message: 14280

Hello,

I am interested in connecting my FT100D to run PSK and Packet. IS the Rascal the easiest and most reliable or is the Rig Blaster much better. If you could include your reasons I would appreciate it.

Also, are their any settings or hidden setup for the FT100D I should be aware of.

Thanks,
Earl

Don't know about the RigBlaster, but I am using the Rascal and it is real
easy to use. I just plugged everything in and it worked.

# 14283. Re: [FT100] less rx gain below 140Mhz

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-20 18:39:24 UTC
From: Mike May
Topic: 14277  Message: 14283

When you tune below 140 MHZ and above175 MHz the radio switches to a different preamp so you no longer are using the dual stage SGM2016 mesfet preamps (Q1004 and Q1011) but instead a single 2sc3356 bipolar stage(Q1008) which has a worse noise figure and lower overall gain. The same applies for the UHF range when below 420 Mhz and above 470 the same bipolar stage is used as the receiver preamp.

# 14286. Is my ATAS-100 Broken?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-20 20:54:49 UTC
From: Robin Alexander
Topic: 14286  Message: 14286

Hi,

Question regarding the ATAS-100 - I noticed today that while driving home and on RX, on 20M I got a Intermittant noise level (difficult to describe but sounds like a fast pulsing) which seemed to co-incide with the ATAS-100 shaking from side to side, as observed in my rear view mirror. When I got home I did a couple of experiments and found I could achieve the same affect when mildly shaking the antenna.

So, I moved up to bottom of the rubber boot until the coil was exposed and it seems like the "Contact Frange" (according to the mechanical drawing), i.e the piece at the top of the outer tube, was loose. Is it supposed to be like that? - even though the retaining screws are tight? by putting the antenna back on and wiggling this top piece the RX was intermittent again.

So my First question is : Has anyone else experienced this (note antenna still seems to tune OK) - though this may help explain an intermittant HiSWR problem I have when mobile.

My second question is : Assuming this is a return to Yaesu, Has anyone returned their ATAS-100 before? Was the turn around time the std 6 weeks?

Third question : Since I need to get the Fan and Hi SWR mods done, and both are still in warranty, looks like the best thing to do is to return the whole lot together, how is the best way to ship them and ensure that they get attention together?

Thanks

Robin
W7YED/GM4YED

P.S I read posting 7222 and it scared me into not trying to fix this myself!!!

# 14287. Unified Microsystems W9XT Band Decoder

From: KB4IDC
Topic: 14287  Message: 14287

Does anyone on the list have any experience with the Unified Microsystems W9XT Band Decoder & the FT-100D? I'm particularly interested in using the board to switch antennas for the VHF+ bands on the 100D if the board can be adapted.

http://www.amateurradioproducts.com/antdecoder.html
Thanks,
Robin Midgett KB4IDC

# 14288. Interface to LDG AT-11MP

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-21 00:08:14 UTC
From: kb7ntl
Topic: 14288  Message: 14288

Has anyone built a working interface to the AT-11MP tuner yet? Seems like it wouldn't be a real problem, except I am hesitant to do it myself for fear of putting bad voltages to the radio or tuner. They built them for Alinco and Icom but of course not for this rig. Why I don't know. Perhaps buyers of those rigs are big spenders. Beats me..
hi hi.
Curious. The tuner is supposed to outperform a FC-20, but it would be nice if the tuning followed my moving up and down the band.
Replies are appreciated.

From: kb7ntl
Topic: 14280  Message: 14289

FYI: The rascal FTDIN model for the FT-100 is on sale this month for 39.95 . Tex "BUX" off. Assembled.
Mine works good on my FT890. If I can't make a pass through adapter, then I will definitely get another. If you use the rigblaster, you will also need a mic adapter. So much for using the mic. The adapter for the mic probably costs as much as a rascal kit. Use the rascal. No external power is a plus mobile or portable too.

# 14290. RE: [FT100] Interface to LDG AT-11MP

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-21 00:15:22 UTC
From: Gary Mitchelson
Topic: 14288  Message: 14290

If you have a D of the 100 version the W4RT On Touch Tune should do the job. The LDG's will retune automatically if the SWR gets above 1.5:1 (I think that the point).
The LDG will out perform any ATU from Icom or Yaesu.

From: w4wb
Topic: 14288  Message: 14293

We build the One Touch Tune (OTT) module for the FT-100D. At Dayton, a fellow lugged his FT-100 across the country just to be sure the OTT would not work with his rig. Happily, it worked just fine with his FT-100 (not D).

We will allow FT-100 users to order the One Touch Tune to try with their FT-100. If it doesn't work with yours, then send it back. All you will be out is the postage. The OTT works great with the LDG AT-11MP or RT-11, or with any other tuner (manual or automatic). Price is $69.95. With it installed, all you have to do to tune is press the tune button on LDG tuner (or a button on a supplied cable if you want to manually generate a carier at the touch of a button).

Gary is correct that you can put the AT-11MP (RT-11) into the autotune mode and it will tune whenever the SWR is > than about 3:1 (no touch tune) and will get it SWR back to < 1.5.

See www.w4rt.com for more information and to order. Also you may order from GigaParts www.gigaparts.com.

Happens all the time. Remove the two screws that hold both of the metal tabs on the ring (careful of the ball bearings under them... don't lose them). Remove the two metal tabs, and bend the ends more to add tension to the ball bearings. Screw them back on.... off you go.

You are correct on saving money and passing it along to the buyer. It has to do with the availability of the helical resonators, off the shelf ones are available for the 138 to 174 and 420 to 470 bands easily but beyond this they have to be specially made IE more expensive.

You shouldn't have to poor of sensitivity in the AM comm band or down in the 403 to 420 FM band, if you have a generator then measure your 10dB AM S/N or FM sinad ratio and see what it is, mine is about .7 Uv AM and .45 FM sinad in the 118 to 140 and 403 to 420 bands. I did have one problem where the preamp, Q1008, died twice on me due to what I think was RF getting back into the VHF/UHF receive port. The ham band mesfets used for 140 to170 and 420 to 474 MHz use narrow bandwidth varactor tuned circuits so they don't seem to be succeptable to RF damage but Q1008 is a wideband unfiltered circuit and it seems to get killed more so, at least in my case. The second time it died I put a protection diode on the input and so far it has been working without any problems. If you measure a sensitivity around -90 to -95 dBm at say 130MHZ in AM or you could also do it in FM mode, then I'd bet that Q1008 is dead in your radio.

To find the connections necessary to connect a different mike to the FT-100, go to WWW.MODS.dk and click on Yaesu, then go to FT100. You will find the mike connection circuitry etc. It is not quite the same as some rigs. You cannot just hook a mike in like on some rigs. Good luck.

Happens all the time. Remove the two screws that hold both of the metal tabs on the ring (careful of the ball bearings under them... don't lose them). Remove the two metal tabs, and bend the ends more

to add tension to the ball bearings. Screw them back on.... off you go.

I agree !
Yaesu needs to stick with radios and leave the antenna building up to someone else.
I had a ATAS 100 for almost a year and had to send it back twice.
I opt'ed instead for a Por Am Valor fiberglass whip one for each band along with the FC-20 auto tuner.

# 14305. Yaesu Service Changes

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-21 22:04:30 UTC
From: Bill Reid- VE3VWD
Topic: 14305  Message: 14305

While in Dayton last weekend , I spent a fair bit of time at the Yaesu booth chatting with the different reps especially the cute blond from the UK.

I brought up the topic of customer service and that many felt that it was poor if not disgusting , especially the turn around time on repairs, not having proper contact with the customer , etc.

Several told me the same thing , that Japan controls the company and that they have finally recognized that customers were upset with their customer service. They were told by Japan how many techs they could have on staff. With the large volume of sales after buying out Standard came larger volumes of repairs. But with Japans economy in disrepair they were not willing to spend the money to hire more techs, the move just complicated things. Japan has now relented and has approved the money to upgrade all facets of the service area.

In the very near future they will be changing their servicing procedure. He describe several but my memory fails me on exactly what they were. I believe that they will notify you when the unit is received and tell you when a tech will look at it. Then when it is ready they will contact you for approval for repairs with an estimate or repair it if under warranty. They are looking for a 2 week turn around.

They sound positive , but as with most of you..... I will believe it when I see it !

I was really impressed with the hand held radio VX-7R , it sure is waterproof for those that saw it ! May trade in my VX-5R for it ...

Topic: 14305  Message: 14306

THus far I am extremely happy with my 100D. Fortunately, I have not had to avail myself of Yaesu's service department which, from what I read, is a horror show. What amazes me is that Icom's turnaround time is, from what I read, measured in days, as opposed to Yaesu's, which is measured in generations or Elephant Gestation Periods. Perhaps Yaesu should consult with Icom and emulate the latter's organization and policies.

It is indeed unfortunate that a company can put out a great product, but fail because of poor service. I hope that is not the fate of Yaesu.

# 14307. Satellite Control Software for FT-100

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-22 04:07:54 UTC
From: radiotube321
Topic: 14307  Message: 14307

Hello, I am not aware of any FT-100/D satellite control / tracking software.

If there is not any available, I would like to write a Linux CAT program that provides all available FT-100/D features, as well as automatic satelite features.

The satelite features would include:
1. RX doppler correction
2. TX Doppler correction
3. Automatic modification of VFO A / B in split mode
4. Adjustable settings for #1 and #2
5. Ability to specifify the time window so that you know how much time you have left on a progress bar.

Now, in order to accomplish this, a couple methods could be taken. The first method:
1. All interfacing could be done via the DATA jack. Thus, you hook your speaker and microphone up to the computer, and the radio keys the PTT and sends your audio to the FT-100. The advantage of this is that the software would automatically switch to VFO B, set the right frequency with doppler shift added in, and then key the PTT. You could make a simple PTT switch by hooking it up to the parallel port and putting 5v DC through it.So essentially, you are just letting the computer know when you plan to PTT so that it can take care of the transmit details.

2. The second method, which would be easier, would be to continuously change the receive VFO, and change the transmit VFO at descreat intervals. The hope is that the transmit VFO is corrected enough that you won't be distorted on the satelite. The problem with this is that there would be momentary "hickups" in the audio when the software switches to the transmit VFO to modify it. My guess is that it might take only 100ms to go from VFO A to B and change frequency and back.

Theoretically, this could be done in a absolute minimum of 1/40th of a second, assuming a standard link speed of 4800 bits per second. However, I think the absolute minimum you might get in the real world is probably three times as slow. So lets say .075 of a second. That is not even 100ms. I don't think you would notice that. So option two is probably the best choice.

Let me know what you guys think.

After reading all the problems with the ATAS-100, I decided to continue using my Hamstic/Hamstick look alikes for mobile use and on my RV. Sure you have to go out to change bands, but you don't have to keep wondering if they will work the next time you need it.

I know, lots of folks have had good luck with them. But when there is grief, it seems like BIG grief. Just an opinion, guys.

Its far more productive to take responsibility and to actually solve the problem, rather than to target some outside influence. If you think about it, blaming "the move" is little more than a condemnation of their own lack of proper planning. Why should a move cause such problems? It shouldn't, not if the move is executed properly. So that dog don't hunt as far as I'm concerned.

As a manager, I always held myself responsible for the failures - and the successes - of my area. If I had a junior executive who sought to point the finger for problems in his or her area, well, he or she was not around for very much longer.

I'd have far more respect for Yaesu's management if they would simply say "we know we have had a problem in our service area. We are solving it. We apologize for any problems this may have caused. I don't want to hear their excuses.

# 14313. RE: [FT100] Studio Microphone

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-22 13:03:56 UTC
From: Eric van de Weyer
Topic: 14299  Message: 14313

Here is a copy of a message I sent out a couple of months ago:

seeing that the PTT has been bought up, I will give a short description of how the PTT and other buttons on the microphone work.

The easiest way is as follows:

from the SW1 line draw four resistors in series. the first is 27k, next is 39k, next is 82k and the last is 220k.

Now, from the junctions of each pair of resistors and the end of the string draw a pushbutton switch (normally open) to ground.

The first (junction of 27k and 39k) is PTT, next is DOWN, next is UP and last is ACC.

Now, although there are a couple of transistors involved in the actual circuit in the mic, you can do exactly the same from the SW2 line leaving out the 220k resistor and last push button. On this one, the first is P, the second P1 and the third is P2.

The lock switch works by breaking the ground connection to all except the PTT button. this disables all buttons except the PTT.

In my car, I have installed a boom mic for hands free operation and made up a little box with the switches which is mounted on the gear stick where I can reach it when my hand is on the stick. This box has all the switches on it and only requires 3 wires going to it to give me all button functions. I actually have a centre off button for the PTT with momentary in one direction and locking in the other. The momentary position is always operational but the locking direction is disabled by the lock switch when I lock the other buttons. I then have a piece of thin twin shielded microphone cable (about 1/8" diameter) running down the gear shift and going to a little control box which also houses the preamp I need for the microphone I use (an Icom HS15) as it's output is a bit low for the FT100D. I think that it may be because the mic is quite old. I've had it for about 10 or 12 years and it has been in several cars now. The extension lead for the microphone, which comes with the separation kit, just plugs into the control box and everything works fine. I have adjusted the preamp so the normal mic gain setting in the radio is correct so that way I don't have to change anything when I move the FT100D into my other vehicle where I don't have the boom mic and don't use the separation kit.

This whole setup is very convenient and seems to work fine on both VHF/UHF and HF where I have had several successful contacts into Europe on my way home from work over the last few days. (I am currently using a Terlin Outbacker Juniot Plus antenna but am probably going to order an ATAS-100 in

from New Zealand in a few days (they are not available in Australia, unfortunately).

I hope that the above description is of use to some of you.

73....Eric VK2KUR

I am having a problem with hooking up my Sure high ball mic.
Normally all you have to do is hook up PTT and Ground, but that doesn't work with the FT-100D.
Anyone ever hooked up any other mic's to this radio ??

I'm just getting into satellites, but despite all the sophisticated doppler corrections that the software can provide, don't you realy need a radio that can do full duplex (e.g. FT847)? Is the 100D really the rig for this? Can you always put absolute faith in what the software is setting on the radio?

Some sat ops want to chime in here?

From: Jeff kb2m
Topic: 14307  Message: 14315

This won't really work on any of the bird's except the FM ones. The Doppler shift changes can be done, but on the SSB bird's there is always a little fine tuning done by ear. This can only be done while monitoring your own downlink. I've made some contact's with my FT-100 while mobile on RS-12, as the 10m/2m Doppler correction isn't as severe as the FO bird's. Manual tuning work's fine on the RS bird's as well as the FM sats. The FM birds can be worked by just tuning the d/l, leaving the u/l on center frequency.
Any questions? www.amsat.org is a good place to start.....

You are 100% correct, Mike. I retired from deluxe Check Printing, the largest check printing company in the world. Well, we made 2 major moves while I was with them and never did a customer know we were even making the moves. It was totally transparent to our customers and NEVER caused any delay in services to the customer. Like you said the excuse they are using is only a means of hiding and does not serve them well.

# 14319. mag mount mobile ant with FT-100D

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-22 15:41:33 UTC
From: backhoefade
Topic: 14319  Message: 14319

What luck have people had using mag mount mobile antennas with the FT-100D ? Mine seemed to work well for about a year after having the Yaesu spurious oscillation mod done but then yesterday I had a lousy experience up on top of Skyline. Drove all the way up there and, at about 2500 feet with a great Bay Area view, I fired up the rig. Got the SWR icon on 40 meters, 20 meters and 10 meters using Hustler whips on a big fat mag mount. I've used this mag mount and Hustler whip combo many times with no trouble. It just looks like the good old "SWR gremlin" creeping back in. So it is likely almost Icom 706 time for me. I did my time and to have this show up again is hugely unacceptable. So unless everybody tells me that they could never use mag mounts with the FT-100D even after having the "official" mod done, I'm outa here. Not a matter of losing faith - rather a matter of responding to my education/experience with this rig.

Topic: 14301  Message: 14320

Sure - Don't mess with them. They are alignment settings for use during the manufacturing process for the most part. You can really mess the rig up in there.
The only settings I use are F51 which lets you set the carrier level during AM operation, F15 which lets you set the HF output power a bit higher (150 versus 100 Watts - only helpful in AM operation, don't bother in CW or SSB - you'll ruin your finals and get less than half an S unit increase in signal reports), and F(I forgot) which I use when I calibrate my S meter. So my recommendation is don't go there. Except for F51 which you must use to set your unmodulated AM carrier power to 25 Watts, if you run AM.

Charles,
Not like you to panic so easily! Check another antenna! Check to see if it is really oscillating! Mobile antennas take a lot of abuse. Did you run a ground strap to your mag mount? Is it still attached? Is there corrosion?

Wouldn't it be unusual (perhaps unprecedented) for the spurious to return after the factory did the mods, and show up on 40 meters, especially?
Examine all the possibilities!
Good luck & 73,
Paul K4PDM

I'm pretty sure its the 5 Mhz band, not the 5 meter band. The new FT-897 is suppost to include support for this newly proposed band. However, I don't see why almost all radios, including the FT-100, could not be modified to transmit on the 5Mhz band.

I have taken the advice of many in this group and sent my FT-100D back to Yaesu (Vertex Standard) for the modifications.

The radio has been in my Jeep since about September of '01 and has exhibited none of the problems reported in this group. However, the consensus of opinion seems to be get the radio "repaired" because the problem(s) will happen.

I checked and the warranty expires in August this year so I decided I'd better get this done. It has been reported that Yaesu will do the modifications even out of warranty, but probably would not replace the expensive PAs out of warranty.

Since that radio has been in the Jeep, I have worked over 50 countries as a mobile, some would be considered a long haul for 100 watts on a vertical. Such places as Australia, New Zealand, Tasmania, Kuwait, Botswana, and many others. Some of those were getting through some hefty pileups, as well.

In the interim, I shall probably fit the Jeep with the little FT-817 and operate it on 17m as that is the last band the ATAS-100 was tuned for.

Come on, Yaesu, get crackin'!!!!!

I agree. It was a smart thing to do.

As long as we're on this topic, I'm going to move to a different area and ask if I am halucinating or if anyone else has experoienced this. According to th manual and everything else I have read, the SWR meter should move to minimum when the SWR decreases. Mine appears to do the oppositie. In other words, it seems that more bars = lower SWR. I figure either I am completely insane, or the thing is actually working this way.

Can anyone spot some obvious (or not so obvious) error I am making here?

Mine certainly works as per the book, i.e. less bars = lower SWR. Remember you need the MTR option switched ON (i.e.highlighted on the screen) and you read the thin bars below the main ones. If you have it set with MTR OFF you will be reading ALC.

Perhaps yopu are looking at the power out indication. As the SWR decreases, the power out will increase, so a high reading = low SWR while a low reading = high SWR.

Chas,

I don't understand how your opinion of the FT-100 can change on a dime like that. Some days you offer highest praise and then this. You seem to have quite a bit of technical expertise, so I would think you would have gone through an error elimination phase by plugging the FT-100 into a known antenna/dummy load to see if it was working properly. I would always be suspicious of a temporary, "mag mount" antenna before assuming my modified FT-100D was at fault. Hopefully you did that, but it wasn't mentioned in your post. I know that I gave up on mag mounts years ago because they eventually become the weakest link in any system either through aging, bad coax or lack of regular use. I hope you find the problem. I'm still loving my old FT-100/ATAS-100 after two years of constant service on CW (primarily), FM and SSB

Mike,

Double check the MTR setting (Row 7, A Key). You might have accidentally gotten it in the ALC meter reading mode rather than SWR. If it is in ALC mode, the meter would rise upon more output which coincidentally occurs when SWR is least.

Just a thought.

Yes, it is a new, "improved" version of ATAS-100 screwdriver. I didn't see it, but understand it is supposed to tune faster. Yaesu are very slow at updating website -- FT-100D (among others) is still listed as a "new" radio.

Yaesu
Yaesu had a sheet of paper with specs on it at Dayton and had a unit on display. I will try to get it scanned in and uploaded to the files section.

The boot is gone and it has a solid body the whole top portion of the antenna. The Yaesu rep told me they would keep the ATAS100 as a product and offer the 12 as a top of the line unit with 30 to 40% faster tuning time.

Clearly it is a new design that eliminates the problems with the ATAS corrision in salt air(read NA USA in winter). The whole upper portion moves up and down and the gasket is under the upper half unexposed to the environment.

No production date or price was announced.

# 14344. FT-100D operation question

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-23 21:36:42 UTC
From: Nate Bargmann
Topic: 14344  Message: 14344

Hi all.

Having bought a new (for me at least) pickup, I'm considering an FT-100D as an "all in one" radio. One thing I've enjoyed in the past is being able to have my FT-8100 scanning on either or both bands while monitoring a favorite frequency on HF with the trusty FT-890. I'm curious if the FT-100D has the capability to scan VHF and UHF frequencies while simultaneously monitoring an HF frequency or be in QSO in HF? Or, does the radio simply act as the '890 where everything would have to be in memory to scan over multiple bands and there is no sub-band as on the '8100?

This is one item I've not seen addressed in the multitude of messages I've read lately.

Thanks to all!

# 14346. FT100D Ranger Truck Install

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-24 00:21:38 UTC
From: Kevin Burkhart
Topic: 14346  Message: 14346

I have finally updated my web page and in the process added a gallery of photos
of my FT100D installation in my 2002 Ford Ranger. There is some text along with the photos to explain some of what I did. If you have questions, feel free to email me.

The radio is working great on all bands, 40m and up, I have not tried 80 and 160 since I don't have antennas for those bands. I did all the mods on the radio last winter, did them myself. I found the SWR mod to be an easy 30min job for me and went with the 50 ohm resistor for the fans.

The radio performance in the Ford Ranger seems to be very good, at least as good as my previous truck (87 Nissan). I don't seem to hear any fuel pump noise and the ignition noise is tolerable and handled well by the NB.

# 14347. 2mtr/440 swr problems

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-24 01:49:17 UTC
From: Shep1478
Topic: 14347  Message: 14347

Well, after about a year or so of constant mobile use, the FT-100 has suddenly started having high swr on 2 meters and 440. HF works great.

I'm using a diamond 2mtr/440 antenna and also the ATAS for HF. High swr is on ATAS too when trying to xmit on 2 meters.

Before kicking myself around any harder trying to figure out the problem, is there any idea you guys might have ? The serial number is: 9E315**.

Many thanks in advance!

Chas,

I don't understand how your opinion of the FT-100 can change on a dime like that. Some days you offer highest praise and then this. You seem to have quite a bit of technical expertise, so I would think you would have gone through an error elimination phase by plugging the FT-100 into a known antenna/dummy load to see if it was working properly. I would always be suspicious of a temporary, "mag mount" antenna before assuming my modified FT-100D was at fault. Hopefully you did that, but it wasn't mentioned in your post. I know that I gave up on mag mounts years ago because they eventually become the weakest link in any system either through aging, bad coax or lack of regular use. I hope you find the problem. I'm still loving my old FT-100/ATAS-100 after two years of constant service on CW (primarily), FM and SSB

Bob K5WA

>> So unless everybody tells me that they could never use
mag mounts with the FT-100D even after having the "official" mod
done, I'm outa here. Not a matter of losing faith - rather a matter
of responding to my education/experience with this rig.
N6AF Chas

# 14349. Re: FT-100D operation question

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-24 17:38:39 UTC
From: Bob Evans
Topic: 14344  Message: 14349

Hi Nate,

I'm not familiar with the 8100 but the FT-100D has a thing called Dual Watch. Dual Watch bounces back and forth between whatever frequencies are loaded into VFO A and VFO B. I normally listen on 14030 CW on VFO A and have VFO B set to my local repeater in case someone pops on. I can carry on a QSO on CW and am still aware of someone coming back on 2M. The listening time between jumps is adjustable between 1-10 seconds. When I actually get into a fast cw qso, I usually turn off the DW because I miss a bit of the CW when it jumps to 2M receive for a second or so, but you may prefer something different.

I think you'd like the FT-100. I have found it to fit my definition of "all-in-one" for two years now. Great rig.

As legend has it, any FT-100/D built before the year 2000 is subject to the hi swr problem. You need to send your's in for a modification... however, you will want to make sure its not your setup first! I suspect that your antenna could be damaged, your feed line, or the pigtail on the radio. Try getting an external SWR meter.

The FT-100D does have dual watch capability. however, it will only
switch between VFO A and B. Really, if you want the kitchen sink with
a perfect VHF / UHF radio, but that Icom 2800 with the LCD screen.

# 14353. Antenna Bill

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-24 16:21:09 UTC
From: ag4px
Topic: 14353  Message: 14353

Howdy Guys and Gals

There is a Antenna in bill that was introduced to Congress May
14,2002
"H.R. 4720" that would provide relief to Amateurs who are now
prevented
by private deed covenants, conditions and restrictions from installing
outdoor antennas. Below is a letter I sent to our Congresswoman Karen
Thurman and to the Gainesville Sun Editorial .
Please use it as a template for your own letter or simply make up
your
own.
It is critical that we as Amateur Radio Operators influence our
repenstatives to take action on this bill.
At the end of the letter is the address and phone numbers for Karen
Thurman.
PLEASE ACT NOW !

73 AG4PX
_____BOF_____

2002

Amateur Radio Emergency Communications Consistency Act

Rarely does a bill come through Congress such as one we have now.
Unlike most bills on Capitol Hill, this one won't cost the already
bloated budget a single penny. In addition, unlike most bills, this
one
has the potential to save thousands of lives during a national
emergency.

I would like to bring to your attention a bill that was introduced
to
Congress May 14,2002 "H.R. 4720" that would provide relief to
Amateurs
who are now prevented by private deed covenants, conditions and
restrictions from installing outdoor antennas.

Rep Steve Israel (D-NY) introduced the "Amateur Radio Emergency
Communications Consistency Act." The measure H.R. 4720 would require
private land-use regulators to "reasonably accommodate" Amateur
Radio
antennas consistent with the now standing limited federal preemption

known as PRB-1, which applies only to states and municipalities.

As Amateur Radio Operators "HAMS" we save lives and assist
police,
fire
and other traditional public service organizations in communicating
and
providing services to victims of natural disasters and homeland
attacks
when conventional communication channels are overburdened, disrupted
or
destroyed as evidence by decades of documented community service by
the
Amateur radio community.
We are a federally licensed group of trained volunteer Amateur radio
operators, which are vital in providing valuable, short and long-range
emergency communications.
Moreover: the effectiveness of Amateur radio operators is determined
by
our ability to erect and use outdoor antenna systems.
Where as: Private land use regulations are pervasive and unfairly
restrict volunteer Amateur radio operators in performing vital
emergency
communications through restrictions to installing effective outdoor
antenna
systems.

In these days of wild- eyed, fanatical pistol-wavers wearing C-4
underwear, this bill might just mean the difference between life and
death to many, many people. Already amateur radio stations are
frequently the only way to communicate in an area devastated by an
earthquake, hurricane , blizzard or attack.
With the cost of only a few dollars at an electronics store, a
knowledgeable and independent ham operator in just a few hours can set
up a worldwide emergency radio station operating on an ordinary car
battery.
A viable ham radio network might just make a major difference to
literally millions of lives during a national emergency in which even
cell phones are inoperative. We need ham operators - if nothing more
than as a backup
To national defense and to ensure that emergency communication
services
are possible.
We need the "Amateur Radio Emergency Communications Consistency
Act"
to
be signed into law. It's the right thing to do before another attack
by
al-Qaida occurs.

I urge you to please vote YES for Bill "H.R. 4720"
Which will recognize the importance of amateur radio and the need to reasonably accommodate amateur radio emergency communications through installation of effective outdoor antennas.

Great turn around from Yaesu on my rig. Sent in for mods after discovering they had not been done (serial #1l2) via U.S. Mail on 16 April. Received by Yaesu 6 days later after being forwarded to Cypress, CA (I wasn't aware they had moved). Received back via UPS Brown 23 May. Not bad!

Invoice states the following:

PROBLEM: Intermittent hi-SWR-TX ground mod

WORK DONE:

2 EA Fitting B4134490 $0.84
1 EA Thermal Guard OHD3-40M $7.01
1 EA AM Repair Labor $70.00 (Wasn't aware there was any AM problem!)

Rig was under warranty, so there was no charge.

Fans run constantly now, at slow speed, and higher speed when transmitting. So far - so good on the SWR gremlin. Getting great reports again on all QSOs. Rig is heavily used and is mounted mobile. I am in the car 16+ hours a day from Friday thru Monday.

If any of you could provide info on what the fitting above is, it would be appreciated.

Nice to have this great radio back in my car. The FT-747GX made a terrible temporary replacement.

Just picked up the XF-117C CW filter for my FT-100. I installed it in the #2 slot, as the manual implyed, and made the adjustments to Menu #31 and # 32. It seemed to only work while I was in the AM mode. I then moved it to Slot #1 and it still only works while in the AM mode. I Wonder if anyone has a solution?

Thanks much,

Randy

# 14361. Yaesu Repair.

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-28 00:04:29 UTC
From: Norm, W3IZ
Topic: 14361  Message: 14361

Where does it end? I sent my Ft-890 to Yaesu on March 8 and they recieved it on March 15. They said the rig was FBand the problem was in my PS. Correct. I get the rig back this weekend, May 24. I sent it packed in styrofoam and peanuts, original carton inside another carton. It comes back in the original carton with no packing, inside another carton with just a crumpled piece of paper on top as a cushion. The clarifier knob and the Notch/Shift knobs are bent. Pure carelessness and it cost me $60. What a bunch of pricks.

# 14362. SWR Problem

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-28 09:39:54 UTC
From: zs5lw
Topic: 14362  Message: 14362

My FT-100 had the VHF/UHF PA replace under warranty by Yaesu Japan. When the rig was returned I noticed the SWR was HI on 70cm. When the rig was away I changed vehicles and assumed it was because the antenna was now mounted on the side of my truck. I never used 70cm so it did not bother me. Now the local ham club has set up IRLP on 70cm, I decided to set the antenna up. I got hold of a MFJ analyser and to my surprise the SWR was 1.2 , yet the rig showed HI SWR. I changed the antenna and coax anyway, but no change in results. I then used a dummy load and an external SWR/Watt meter. The external reading showed SWR of 1.15 and an output of about 0.8 watt. The rig showed Hi SWR and 50% output. (power was set to 50% in menu). Then to confuse me even more, every now and then the rig would show the same results as the external meter, that is low SWR ( which is fine) but the output power stayed at less than a watt even when set to 50%.

The rig works fine on VHF.

Anyone have any ideas or come across this problem before.

Les Watts

Sounds like the 440MHz spurious oscillation, which I occasionally had
until I did the "SWR Mod." The output from the radio is mostly on some
out-of-band spurious frequency, not the one you want. Be careful or you'll
burn up another final!
Good Luck & 73,
Paul K4PDM

Thanks Paul, I would have thought Yaesu would have done all mods and checked the rig before sending it back halfway across the world. Well I check it out on a friends tracking generator. Biggest problem in South Africa is there is no agents for most Ham gear, and with only one ham outlet with no technical staff your basically on your own.

No,

you put one end of the 27k resistor to the SW1 line and the other end to your PTT switch which grounds it to transmit.

The SW1 and SW2 lines are multi-purpose and do different things with different resistance values to ground. The PTT is just one of them.

Chas,
I know you will do a lot more checks on that antenna
before joining the dark side.
I'll bet its something else going on. Time to whip out
all those analysers you've got access to.
I use the smaller MFJ mag mount with my ATAS100 and
haven't had a spec of problems mobiling all around
Washington and Oregon.
Your VOM will probably find the problem.

Hi Group,

i received my brand new FT-100D this morning and all seems to be ok.
But on our local frequency we use DCS Tonesquelch and my friends
notice a strange sound in the background when i turn DCS on.
So i received my signal back with my TM-D700E and i also hear this
sound when i'am transmitting.
It is on 2m and on 70cm when DCS is on.
Sounds like a motorcycle is running in the background hi.
Is this normal? Anybody has the same effect?
Or must i send the rig back?

greetings
Markus

# 14382. Preparing for Purchase

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-29 21:02:00 UTC
From: overthepole
Topic: 14382  Message: 14382

Hello Group,

I'm aligning my unallocated funds with the intention of purchasing an FT-100D this summer.

To that end, I've been looking through the group postings and I have a couple of quick questions.

One is, I see a lot of radios going back to Yaesu for SWR mods and fan mods etc. Have these issues been rectified in the new units? Would I buy one off the shelf and have to send it to Yaesu?

Also, I'm assuming that I'll want to get the ATAS-100, or now the 120. One thing I'm not clear on is the way the antenna tunes. My assumption is that after you are on the desired frequency, you would press Tune, and the antenna does its thing. Is this correct? Or is there other steps or equipment involved?

And, who seems to have the most cosistently low prices?

In general, any advice going into this would be helpful. There's nothing like getting it right the first time!

Thanks in advance for the boost,

73 de Jeffrey

# 14388. Is the Control Head built to take it?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-30 04:51:06 UTC
From: KennerNW
Topic: 14388  Message: 14388

I am thinking about buying an FT-100D at a Hamfest this weekend. I love the reviews and great feedback that I have found on this board, but have one question that doesn't seem to have been addressed here. I would like to mount the unit in the dash of my Jeep Wrangler and remove the control head and stow it out of sight like a car stero face plate. Is this feasible? Are the contectors on the CH built to take the stress of this on and off action or will I end up breaking something.

Thank you for your advice,

- Ken, WB2FXG

Mostly with late models t's the fan mod
only, the SWR mod seems to be done.

> Also, I'm assuming that I'll want to get the ATAS-100, or now the 120.
>
>

The antenna is a big part of the battle,
and there are many possibilities. It seems
to depend on just where you wish to operate.
Also how you will be operating, such as
while driving, mountain topping, camp, etc.

> And, who seems to have the most cosistently low prices?

Don't forget the practice of gathering the
prevailing prices on the internet, and allowing
your local, regular dealer to bid on them.
I bought mine, plus the accessories as a
package. While my dealer wasn't always the
lowest, when we added up the purchases
he was very close. I would have had to order
from several dealers to get the rock bottom.
Not only does the add to shipping costs, and
constitute a big hassle, it also doesn't take
into account the benefits of someone you
know locally dealing with any possible problems.
I think that has value too.

In general though try to pick someone just
over the state border closest to you...
no sales tax.

Denny ,
So your saying you like to receive this kind on junk mail????? Help me out here, I'm a little confused by your comment.
If you actually read the mail you'll see that I was not the original sender. I happen to think it has no place here. But if you like it I'd be perfectly willing to forward any junk I get to you. What do you say?

READING THIS MESSAGE WILL CHANGE YOUR LIFE FOREVER

!!!!!!PLEASE READ THIS ALL!!!!!!!!!

!!!!IT HELPED ME & IT CAN HELP YOU!!!!

!!!! NOT A SCAM !!!!

!!!I REPEAT NOT A SCAM!!!

THIS ONLY COST YOU A 6.00 CASH !!!INVESTMENT!!!

IT DOES WORK

!!!PLEASE READ ALL!!!

I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. Well GUESS WHAT!?... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!!

Let me tell you how this works and most importantly, WHY it works... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!
Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in!
It's easy. It's legal. And, your investment is only $6.00 (Plus postage)

IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is 99% no risk - it really works!
If all of the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions.
You will be part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.

Here are the 4 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal. Mail the 6 envelopes to the following addresses:

#1) Christine Thibeault
P.O. Box 522197
Miami Fl.
33152-2197

#2) Sarah Olson
131 Idlestone Ln.
Schaumburg, IL 60194

#3) Shereka Manigault
P. O. Box 126
McClellanville, SC 29458

#4)Cristal Jones
150 E. Stetson,
Hemet, CA 92543

#5)Carla Ann Norwood
1543 garland ave
Louisville,KY 40210

#6)I.Finkel
913 Pine St. Apt 100
Philadelphia, PA 19107

STEP 2: Now take the #1 name off the list that you see above, move the other names up 1 place (#2 becomes #1, #3 becomes #2, etc...) and add YOUR name and address as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! You won't get very much unless you post like crazy. :)
This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws.
Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)
so, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!

-----DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS--------------

Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.

Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.

Step 3) Save your new notepad file as a .txt file. If
you want to do your postings in different settings, you'll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)

Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

**REMEMBER, THE
MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT YOU HAVE TO POST A MINIMUM OF 200**

That's it! You will begin receiving
money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now,
each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you TURN 6 (six) DOLLARS INTO $6000 or even $60000 EASY AND HONESTLY!!!

The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are
now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will really work.

Why would you want to narrow the passband for PSK31? the idea is that with the 2.4kHz you will see far more potential stations than with only 500Hz. that's one of the beauties of the mode.

Is there any way to select the 500 Hz CW filter while in the SSB mode for PSK31 operation? What options are there to narrow the passband operating PSK31?

From: Gary Mitchelson
Topic: 14395  Message: 14395

I now have been asked if FT100 (faceplate integrated into the dash below the AM/FM radio) is a XM radio, and now someone asked me if my 8' tall, 2.5" diameter, Cap Hat topped Hi-Q HF antenna is a XM radio antenna.

I think it just may be easier to answer yes, or use that answer when people ask what that is. The XM people will start to have to field calls on why their antenna is so big!

From: ng3f
Topic: 14396  Message: 14396

I just purchase a FT-100D, still waiting for it to arrive.
I'm looking for an inexpense ps to use with the 100D.
Inexpensive, because the 100D will mostly be used mobile but
I need a ps for the occasional portable use only.
I've seen the Samlex SEC-1223 for $90 to $110.
Any comments or suggestions will be appreciated.

# 14397. RE: [FT100] Is the Control Head built to take it?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-30 14:40:41 UTC
From: Schachter, Abe
Topic: 14388  Message: 14397

Ken,

I take a slightly more low-tech approach to concealing the control head. Mine is mounted on a free standing R-A-M flex arm (available from HRO and others) such that I can easily toss a baseball cap over the control head so there is nothing to see. Peering into the car from the outside does not give a clue as to what is there. Of course the license plate and the big screwdriver antenna are known to attract attention both on and off the road HI HI HI.

Subject: [FT100] Is the Control Head built to take it?

I am thinking about buying an FT-100D at a Hamfest this weekend. I love the reviews and great feedback that I have found on this board, but have one question that doesn't seem to have been addressed here. I would like to mount the unit in the dash of my Jeep Wrangler and remove the control head and stow it out of sight like a car stero face plate. Is this feasible? Are the contectors on the CH built to take the stress of this on and off action or will I end up breaking something.

Thank you for your advice,

- Ken, WB2FXG

Chris,
You'll need to make sure that the P/S you are considering is designed to be used with communications equipment. It must have decent quality filters to eliminate any unwanted noise. Low cost power supplies are usually unfiltered. Tripplite and Astron both make very good power supplies. Hope this helps.

I've been using the Samlex with my FT-100D for full-time base use. It's small, quiet and I've had no problems at all. Good luck.

Chris,

When it comes to power supplys, price isn't always the best way to decide. You want real stability, and if you buy the price tag only you may be stepping over dollars to pick up dimes. Go with the best you can afford, but don't make the decision based on the price. You may regret it later. I use and Astron 35 Amp and I run everything off it.

73,

Dick

From: Jesse
Topic: 14396  Message: 14401

Run a extra long power cable from the battery of your vehicle to the radio in the house. Cost of wire is roughly $10. Fashion a Banana jack to the front of the truck so you can have a quick disconnect. If you park yer vehicle in the same spot every night then you can just cut a line and bury the cable with conduit to keep from having to roll it up...

$30 gets you a small tractor battery. You can run a small charger to keep the battery up.

$80 gets you a UPS system. Has the charger and all built in. Supplies 110 volts when electricity goes out when it switches to battery. I run a older model that has been fixed so that I can run direct off the batteries as backup when the power goes out.

Then you could go for the other PSs. Samlex would be the route to go. They are light weight and easy to carry. A friend has one that we use on SOTA becuase the ladder on the ship is narrow and at times hard to climb.

I think Ken wanted to do what I am doing. Mine is located where the factory stereo was, not using the separation kit, and I remove the front panel like that of a car stereo. As I said, I have done this for two years with no problems.

Yes, This is exactly what I hope to do. With the main unit embedded in the dash and the control head (and antenna)removed I feel fairly cofident that an '89 Jeep will not stick out as a likley target.

Thanks for all your great ideas.

The FT100 will not transmit any higher than 40 mtrs
with the ATAS100 attached and ATAS chosen in the
menus.
Unless someone figures out a way to circumvent that,
your efforts will be fruitless unless you use a tuner
and add some major element length and capacity.

I have used both the Samlex and Astron power supplies.
I like the Samlex when I travel as it is reasonably
light and can convert to 240VAC/50Hz operation with
the removal of one jumper. That and a power inverter
also allow me to power 12VDC and 120VAC/60Hz devices
from Europe!

The PSK31 mode is indeed beautiful, but it shares a small sliver of spectrum with some bad neighbors, such as the cacophonous PACTOR mode which users can run unattended and at full legal power. These stations will quickly render adjacent PSK signals unreadable unless a narrow filter can be employed. A strong adjacent PACTOR signal will pump the daylights out of the AGC burying the PSK signal. PACTOR is used for sending email and so it will sit there belting out its unpleasant screeching sounds oblivious to any other users on the spectrum, occasionally right on top of them. It's not unusual for it to send the same fragment of email over and over until the receiving station gives it an acknowledgement.

Hi Lee,

OK, fair comment.

I don't have too much problem along those lines where I live (Sydney, Australia) so haven't had to consider that. I do like the way you can have it sitting on one frequency, 14.070, and see multiple stations coming up over the 3kHz or so of spectrum which is being displayed.

DCS is digital controlled squelch not a tone BUT there is a shut off tone
at the end of the digital word at the end of the transmission to shut of
the receiving radio's audio be fore carrier drop to stop squelch tail. This
is how Motorola redesigned it's concept in the early 1970's and was the
1st 2-way radio manufacture to market radio's with DCS or with the tone
controlled squelch in there radios.

Subject: [FT100] RJ-22 Female Jack

Anyone know where I can get a female jack for the
RJ-22 plug that is on the FT-100D microphone?
I'm looking to make up an adapter cable to a 8-pin
jack.

It's actually RJ-12 which is a 6-position, 6-pin telephone plug ( used for 2 or 3-lines )... it looks quite like the 6-position 4-pin plug called RJ-11

Radio Shack sells a wall-surface-mount jack for a little over $6 for this 6-pin plug.

Thanks

# 14425. Re: [FT100] RJ-22 Female Jack

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-05-31 18:37:18 UTC
From: Michael A. Waldron
Topic: 14413  Message: 14425

I made my accessories out of BellSouth 3 line "freedom phone" parts that I found at the local Mernards (home improvement store). I was able to buy MIC extensions, 6/6 RJ-22 connectors, etc.

I ended up using a small cable (1') with a coupler on the end so I didn't have to remove the faceplate each time I switched microphones or used the rigblaster.

I also made a RJ-22 -> Yaesu 8Pin MIC cable so I could use my MD-100a8x. This way I only needed 1 coupler, and didn't have to deal with female connectors much.

All is good if I just had my FT-100 back. UPS evidently used it as a kickball and snapped my faceplate in half when I sent it in for the modifications. Yaesu is giving me the runaround, it's just generally unpleasant. I hope to have a radio for field day...

I have a great new frequency entry keypad for it when it gets home though :)

I think what your looking for is a 6 position plug aka, RJ-12. I bought a bag of fifty from Great Cables. It'll take the round network cable instead of the flat telephone cable. On the other end you can just use an eight position plug aka RJ-45. These are easier to get, even for the connector end.
Good Luck 73,
Mike... KG6JMM

You guys are always great inspiration and an insightful lot. :-)

Seriously, so I'm asking for pointers.

Traded in the old car which was pretty fully loaded with gear for a new 2002 Honda Civic.

Any sites/info on the net for pointers on mounting locations / ideas, wiring, routing, etc?

I've got the FT-100D and the ATAS-100, plus the Kenwood TM-742 (w/triplexer for 2/220/440) at least.

Thanks everyone in advance,

Steve

Date: 2002-05-31 20:30:58 UTC
From: Marshall, Keith
Topic: 14371  Message: 14428

Hello Steve,
I have a 2001 Civic LX and run the FT-100 mounted under the passenger seat and the ATAS-100 on a license plate mount. Also run the Diamond SG7900A on the K600M mounted to the left side of the deck lid. The control head is mounted in the slot where the CD player would be mounted below the broadcast radio. This is the second Civic I've had set-up this way. The previous Civic was an '88 LX.

Keith, AB8BD

Subject: [FT100] Radio install in new Honda Civic

You guys are always great inspiration and an insightful lot. :-)

Seriously, so I'm asking for pointers.

Traded in the old car which was pretty fully loaded with gear for a new
2002 Honda Civic.

Any sites/info on the net for pointers on mounting locations / ideas,
wiring, routing, etc?

I've got the FT-100D and the ATAS-100, plus the Kenwood TM-742
(w/triplexer for 2/220/440) at least.

Thanks everyone in advance,

Steve

# 14429. Re: [FT100] RJ-22 Female Jack

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-01 02:11:30 UTC
From: Michael Ziebell
Topic: 14413  Message: 14429

Chris (NG3F), I double checked the end of my microphone it is a RJ12. I even mounted one to a piece of scrap cat5 cable and plugged it into the receptacle in the body of the FT-100D. It snapped in like it was made for it. So I don't understand the RJ22? Is that the receptacle connector inside the the radio? Because the microphone end has a RJ12 on it.

Hello group.
My atas is stranded in the down position. When I apply 10v to the coax, nothing happens. When I apply 8.4v I here the faintest of motor sounds. Very very faint. Almost undetectable. The antenna does not move anytime though.
Any thoughts?

You are right fellas it's a RJ12 not a RJ22.
Thanks for correcting me.

I'm still looking for a female jack to put on the end of a cable.
Good hints/suggestions so far, I just haven't had a change to
check them out.
Thanks

Chris, NG3F

# 14433. SWR problems on 440MC

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-01 08:18:43 UTC
From: hamradio@tiscali.se
Topic: 14433  Message: 14433

I have read about SWR problems on the old type (first type) of FT-100.
is ther anybody who can give me some tip about this problem exept for
sending it to the radio-repair-man...?
I know it will take at least a moth to get it fixed of him so please?
This is the problem:
On the old type (NOT FT-100D) the SWR icon sometimes appear when I transmit
on 440MC.
Antennas are OK, I have checked with several and dummy load.
I think I can fix it my self if I only get some information about how.
Best regards Peter SM6VKC

If you have a look at any of the messages on this group, you will see at the bottom a link to Lee's (the moderator) FAQ page.

On it are several useful bits of information including how to do the mods complete with some excellent pictures.

In fact, I have just done the mods for a mate of mide this afternoon at our local radio club and it took me about half an hour to do both the SWY mod and the fan mod.

Well I finally bit the bullit and bought my 100D yesterday, and got it installed in the car this morning! So far I love it. Only had a few hours to play with it though. I also got the ATAS-100 to go with it. Now I'll be able to get the FT900 out and free up a little room. hi hi.

I'll be spending the weekend loading up the memories and playing a little more.

I can honestly say that this group is the main reason why I decided to buy one over a 706 (not that there is anything wrong with them). So I must say thank you to everyone on the board who helped convince me!

Put the ATAS100 directly on the radio pigtail output and see if it moves, if so check your coax and mount for a problem. If not then the radio probably needs to go back to Vertex unless you are a skilled SMT tech who has the stereo microscope and can replace some devices. The radio has a 4 terminal regulator which supplies 1 amp at either apprx 8 vdc or 10 vdc for down up. This is more than likely the culprit if not your feedline and mount.

Has anybody mounted an ATAS directly (drill a hole) to the roof of their car/truck? I am considering moving the ATAS from the bed of the Chevy S-10 to a mount on the roof -- so that I can mount a 75 m antenna on the bed. I am concerned that the wind load on the ATAS will result in leaks or worse, a projectile on the highway.

Any advice? Experiences ?

Ralph, KA8ZGM

My ATAS is mounted to the top of my GMC Safari van for the past couple of years. I don't leave it on all the time, but it has been up on the expressway at 70 MPH for extended periods with no problems. The van makes a great ground plane!

jeff,

well this is a diesel w/ dual batteries. thought of
that and does same with engine on or off ....

it worked okay when i hooked it to the ft100d pig tail
directly as suggested. when i put it back on the mount
it worked okay for 5 or 6 band changes, then locked
up again ..... gues i will go back to hamsticks, the
always worked .... :(

Well if it works ok going direct to the radio I would look REAL close at the coax and also the ground at the antenna. Sounds like you might have a bad ground even though you might think it is good. Put a ohm meter on it and go to your battery and see what you have. Just because a ohm meter might show that you have a good ground locally, it doesn't mean that you have a COMPLETE ground back to your battery!! This would also affect the way that it would work on the air.

Havn't been following this one... But have you checked your coax? what is the length of coax?
Seems that you have it going up but are you able to get it do go down?

I had this problem with it not functioning properly. But I was running a coax length of 100' and it would word about 10-30% of the time. I did double check for bad coax and found a bad piece. After replacing I still had the some problem. I then changed the SO-239 connector on my mount and got it working 50% of the time.... Knowing this has helped me plan my portable station setups. I have gotten 25-50ft. lengths of coax to work 100% of the time.. Just the antenna tunes really slow.

From: Jesse
Topic: 14438  Message: 14448

well, the other thing you can check is the GND at the radio... I had
that problem with it not being able to tune certain bands. 20M was the
one that had the most problems.. All I did is take a short GND strap
from the radio to the metel of the seat of my suburban which was
attached to the frame of the trunk.. Fixed 99% of my tuning problems.

Running a ATAS on a mag mount.

jeff,

well this is a diesel w/ dual batteries. thought of
that and does same with engine on or off ....

it worked okay when i hooked it to the ft100d pig tail
directly as suggested. when i put it back on the mount
it worked okay for 5 or 6 band changes, then locked
up again ..... gues i will go back to hamsticks, the
always worked .... :(

# 14449. Bumper mounting ATAS-100?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-02 15:30:51 UTC
From: Raja Chatterjee
Topic: 14449  Message: 14449

Has anyone bumper mounted an ATAS-100?
I know we're supposed to keep the body of the antenna above the car, but I have some environmental issues can't get around.
All of my mechanical probs would be solved by mounting the ATAS on the rear bumper of my GMC Sonoma Crew Cab.

BTW, mobile HF rocks! EA8BGY on 20m while going to pick the XYL up from work for dinner. (EA8BGY is Canary Islands).

I love this little rig. I bought it 1 month ago and it runs the fans on VHF xmit and there are no SWR probs. I will open it up soon to make sure the mods have been done, but it behaves like they have been done.

It amazes me that Yaesu didn't see fit to put a ground point on the back of the FT-100/100D. Has anyone drilled a hole the the back (at an accesible point), added a machine screw with a wing nut to have a chassis ground on this radio? I run mine an a Ford F-250 Pickup XLT Lariat. The front seats are bucket type with a large vinyl type material console between the seats. I have the quick disconnect Yaesu mobile mount, but the base of the mount is bolted to the front of the console with no place to ground it.

I've thought about adding a grounding point on the rear of the radio and using a braid strap from a bold on the seats and then connect the free end to the rig when I put it in. But this radio serves dual purpose (mobile and in house) and it would be a pain in the rear to connect and then disconnect the ground everytime I put the radio in the truck or take it out.

I have a FT-920 in the shack and an Alinco 2 meter. I like the availability of 70cm and multi-band scanning with the 100D, thus the reasoning for in and out of the vehicle.

So, any comments about drilling a hole in the back and adding a ground lug would be appreciated, especially if someone has already done it.

If the fans don't come on after it has been sitting in RX mode for a while, then the fan mod HAS NOT been done and will need to be done. On a warm day you should hear the fans come on after a very short time if the car has been closed up. Here in Florida, when I get off of work and turn mine on the fans start to run instantly because it is so hot in my van.
A good test would be to put it on hf and wait until the fan runs in rx and then switch to VHF or uhf rx and see if they come on again....If not then you need the mod!!

What about those four nice pre-drilled
bolt holes for the mounting bracket?

Why not just attach a eyelet equipped
flat braided copper strap to one of the
four mounting holes, and let the lead hang
back, like all the others?

I also carry mine to the house and back. I
use the quick mount, and I just disconnect
the leads (various connectors) on the back
part of the radio, remove the back part
from the car mounting bracket,
(in a mounted box in the trunk,) disconnect
the faceplate in the car, and carry the two
pieces in a padded bag into the house
(motel, camp, etc.).

What's one more lead?

Someone else suggested that you might have the rig in the ALC meter mode. I'll bet that's the case. Still, I'm curious; do you continue to hear voices even after the receiver is shut off?

Thanks, Tim...

I'll give that some thought. Will be out of here for vacation, so won't be able to find time before we leave. Maybe a short pigtail braid woth a lug on one end, placed under the quick disconnect on the radio. And at the end of that pigtail a male or female connector to mate with one permanently bolted to a ground point on the chasis. Is that what you were suggesting or am I off in left field? I don't have the remote control head separation kit, so I can't utilize that.

Hi Dick.. I had the same problem until I took a piece of coax, striped the shield from it and used it as a ground strap on both sides of the mounting bracket into the rig and then to a chassis ground. Works great and, it may even start to grow potatoes it is grounded so well. Good luck and 73's de Jim AD6DW

Topic: 14438  Message: 14457

ya pete, seems its either the GND or COAX.

I'll give you a example how I have mine setup.
I have a 95 suburban. Using a Wilson 1000 Magnet on the top towards the rear. The coax is ~18ft long.
The radio is mounted under the rear seat in the middle of the longest seat. PWR cables are rounted along the driverside under the covers for the doors. I have the mount that came with the radio and my GND which is about 6" long is on one of the bolts that connects to the bracket then into the radio. The GND strap goes to the Seat bottom which goes to the Frame of the truck.

I never used the slide out. Possible where the slide bracket mates with the radio bracket you may want to scape alittle paint on the bracket itself. You probably getting a GND through the coax and the DC line but sometimes the path is to long. Atlest that is the only some of us has come up with.

I believe there is a screw on the back up the radio you can use.. but knowing why you bought the quick release.. you don't intend to keep it in the truck. I would try a short GND and see if that works. Then figure out how to implment the quick release and the GND so its not tied to the radio.

One thought. I take it you have one of the new Fords? Which means everything in the passenger compartment is plastic except the one bolt that hold the cab of the truck which is under the carpet up by the Firewall/Transmission hump.. Run a GND from your quick release to that bolt and see if anything changes.. Or run it first to the radio itself and then to the mount and see if you can catch a GND...

Another thought is to make a GND with a Alligator Clip from that special bolt and then clip it to the radio when you slide it in.

Topic: 14438  Message: 14458

I use one of the moble mount screws to ground my ft-100,
It works fine and is easy to remove to take the radio moble. also use it to grount to the car. That way no new holes in the radio.

Subject: Re: [FT100] Re: ATAS-100 MALFUNCTION

It amazes me that Yaesu didn't see fit to put a ground point on the back of the FT-100/100D. Has anyone drilled a hole the the back (at an accesible point), added a machine screw with a wing nut to have a chassis ground on this radio? I run mine an a Ford F-250 Pickup XLT Lariat. The front seats are bucket type with a large vinyl type material console between the seats. I have the quick disconnect Yaesu mobile mount, but the base of the mount is bolted to the front of the console with no place to ground it.

I've thought about adding a grounding point on the rear of the radio and using a braid strap from a bold on the seats and then connect the free end to the rig when I put it in. But this radio serves dual purpose (mobile and in house) and it would be a pain in the rear to connect and then disconnect the ground everytime I put the radio in the truck or take it out.

I have a FT-920 in the shack and an Alinco 2 meter. I like the availability of 70cm and multi-band scanning with the 100D, thus the reasoning for in and out of the vehicle.

So, any comments about drilling a hole in the back and adding a ground lug would be appreciated, especially if someone has already done it.

Pete, You may have already checked them BUT it is very critical that you have a GOOD GROUND both at the radio and antenna. Depending on your antenna installation you may need to run some grounds. I ran into a very similar problem a few weeks ago and after some checking found that where the connector base was mounted that a little corrosion had built up under the mount, after cleaning it up all worked well. Just recheck all grounds and by this I mean check them physically take them apart and check them, that is where I made my mistake at first. It about drove me nuts!! ..............Good luck...KØDLW

OKAY HERE IS THE DEAL ..... ATAS-100 WONT GO UP OR DOWN.

HERE IS WHAT I DID:

THERE IS 11.36 VOLTS PRESENT WHEN RADIO IS PLACED IN TUNE, AT THE ANTENNA CONNECTOR. BUT NO ACTIVITY

TOOK ANTENNA INSIDE AND APPLIED 11.36 VOLTS TO IT AND IT STARTED TO EXPAND, AS IT SHOULD W/ A VOLTAGE OVER 10V.

SQUEEZED CONNECTOR PINS TIGHTER, STILL NO ACTIVITY .....

SOOOO WITH IT ATTACHED IT DOES NOT GO UP OR DOWN ......
ANY SUGGESTIONS ..... YEA I KNOW, SELL IT OR SEND BACK TO THE HOLDING TANK IN CERITOS ......

# 14462. RE: [FT100] Wind Load and ATAS

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-02 20:02:15 UTC
From: Gary Mitchelson
Topic: 14442  Message: 14462

I had mine mounted like that for 2-years before the ATAS succumbed to the matching coil failure syndrome. I have some pics on my website of it.
One bit of advise, do what I did, I used a 12" by about 8" by 1/8" thick aluminum plate under the roof to provide extra support. The plate server a second purpose, proper grounding for the ATAS. At each corner of the plate I had 1" wide ground strap that attached to the nears roof beams. It takes a little bit of work but if you can take the headliner down it's easy (my 2000 Outback was easy).

A dual band antenna now resides there and after 60K miles (50K with the ATAS) I have no leaks either (a little windshield sealant works wonders).

Subject: [FT100] Wind Load and ATAS

Has anybody mounted an ATAS directly (drill a hole) to the roof of their car/truck? I am considering moving the ATAS from the bed of the Chevy S-10 to a mount on the roof -- so that I can mount a 75 m antenna on the bed. I am concerned that the wind load on the ATAS will result in leaks or worse, a projectile on the highway.

Any advice? Experiences ?

Ralph, KA8ZGM

# 14463. Mods?

Date: 2002-06-02 20:32:53 UTC
From: Olin Boyer
Topic: 14463  Message: 14463

I have a new FT-100D on order, and won't even get it until next week.

I am new to this group, and am concerned about all the talk about "mods" that may or may not need to be made.

Is it possible that any mods needed have already been made by the manufacturer?

I plan to use the unit as a "base station", rather than a mobile, but plan to use the ATAS-100 on a ten-foot mast. I will use the ATBK unit, to insure a good ground plane, and have a Comet duplexer on order so I can get full use from the screwdriver antenna as designed. Comments? Assurances?

Hi Pete

OAN
Do you have the negative cable run direct to the battery along with the positive???
You really need to have both direct to the battery....

Good luck

Hi Ralph,
I have mounts for the ATAS in the center of the roof on both my S10 blazer and suburban. I don't leave them on full time but they have worked real well over the last 2 years. I did put a 1/16" thick by 10 inch sq steel plate inside the roof to carry some of the load. You do not need any straps etc. Just make sure the mount grounds well to the upper surface of the roof. The ATAS works ALL bands. You DO NOT need a ground at the radio IF you ground well at the roof. On the motor home i had a small problem with RF trying to come down the coax. It has only a partial steel frame. It took a couple of 6M 1/4 wave legs on the glass roof to make it work. Also needed a couple of large ferite beads on the coax. Now works great.

Erwin K6RCX

PS-ATAS has not fallen of at 80+ mph :-)

Hi Olin,
The mod that is most importent is the "VSWR mod". It adds grounds on the coax going from the PA to the filters inside the radio. It MAY now be standard from the factory, if not you will need it sooner or later. The ATAS likes A LOT of ground plane or metal at the base. Odds are it will not work on the 10 foot mast even with the ATBK (which fixes V-Uhf) You may need to add a number of radials at the base.

Get two, a short pigtail, with eyelet's on each end,
and a longer one with the same eyelet's.

Use the smaller one on your radio (one of the
mounting bolts), and mount the larger one to your
vehicle using a self tapping metal screw, or a
convenient chassis bolt.

To connect them use a "dual wing-nut,"
( a wing-bolt, and a wing-nut) with some
matching washers.

By the way, I use stainless whenever possible.

Tim

# 14472. DCS Problem

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-03 12:40:24 UTC
From: Markus.Homma@t-online.de
Topic: 14375  Message: 14472

Hi,

thanks for all the replies.
Unfortunately there was nobody with a service manual who
told me how to set the dcs level.
So today i sent the unit back to the dealer and he will check
the dcs level.

I worked some stations with the FT-100D and the FC-20 on shortwave
and i'am very impressed.
The old swr problem seems to be solved...No problem with this little gremlin
;-)
and the FT-100D was working without problems.
We will see whats up with the dcs...hope that the i have the unit back as
fast as
possible. :-)

Stay tuned!

I mounted my to the roof of my minivan about 10 months ago using a NMO mount I already had in place from my dualband 1/4 wave. I have not had any trouble from the mounting at all. I used a NMO adapter between the ATAS and the NMO mount and when I do need to remove the ATAS I remove the adapter, leaving it attached to the ATAS. Then I cover the NMO mount with a standard NMO mount plastic cover/cap. I have not experienced any of the tuning problems mentioned on the list with this set up. It's survived a Minnesota winter/salt/ice and the trip to and from Dayton. It does have a little lean to in now though! I hit a crow that was flying accross the interstate while I was going 70+ MPH.

Yes, I did just that several months ago (added ground point).
Just be careful.

Subject: Re: [FT100] Re: ATAS-100 MALFUNCTION

It amazes me that Yaesu didn't see fit to put a ground point on the back of the FT-100/100D. Has anyone drilled a hole the the back (at an accesible point), added a machine screw with a wing nut to have a chassis ground on this radio? I run mine an a Ford F-250 Pickup XLT Lariat. The front seats are bucket type with a large vinyl type material console between the seats. I have the quick disconnect Yaesu mobile mount, but the base of the mount is bolted to the front of the console with no place to ground it.

I've thought about adding a grounding point on the rear of the radio and using a braid strap from a bold on the seats and then connect the free end to the rig when I put it in. But this radio serves dual purpose (mobile and in house) and it would be a pain in the rear to connect and then disconnect the ground everytime I put the radio in the truck or take it out.

I have a FT-920 in the shack and an Alinco 2 meter. I like the availability of 70cm and multi-band scanning with the 100D, thus the reasoning for in and out of the vehicle.

So, any comments about drilling a hole in the back and adding a ground lug would be appreciated, especially if someone has already done it.

73,

Dick

Get two, a short pigtail, with eyelet's on each end,
and a longer one with the same eyelet's.

Use the smaller one on your radio (one of the
mounting bolts), and mount the larger one to your
vehicle using a self tapping metal screw, or a
convenient chassis bolt.

To connect them use a "dual wing-nut,"
( a wing-bolt, and a wing-nut) with some
matching washers.

By the way, I use stainless whenever possible.

# 14478. Re: Mods?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-03 16:06:18 UTC
From: backhoefade
Topic: 14463  Message: 14478

There are two "must do" mods required. Plus a third one which I strongly suggest you do yourself.
The first mod eliminates a spurious oscillation problem (13.65 MHz) which manifests itself at the system level as a high SWR indication and desired-signal output power foldback. You can tell if the rig has the mod by opening up the top cover (6 screws) and confirming whether or not there are some metal ground straps screwed into the horizontal chassis rib. If your rig just has some sticky-back copper tape then you need the proper modification. You can see pictures of the way to do the mod at this website in the Photos section. I sent mine to the Cerritos repair center to have it done. Doing it yourself will likely void the 1 year warranty. Your choice.

The second mod fixes the problem wherein the fans never turn on during long periods of receive-only operation on VHF/UHF. You can tell if the mod has been done by removing the bottom cover. The mod consists of adding a temperature sensitive switch on top of one of the VHF/UHF PA modules. I doubt that your rig has that; I've never heard yet of a new rig that has it. The temp-switch is the way Yaesu mod's the rig; there's an alternate method described at this website which uses the addition of a single resistor that keeps the fans spinning all the time. I personally recommend that you send the rig to Cerritos and get the switch added.
The third mod is the microphone mod originally described by Richy, N2ZD. It's described at this website and at another site. I think it's http://www.mods.dk
I'm on vacation right now so I'm somewhat disconnected from all of this. There's also some info I posted there regarding AM operation. The rig is a great performer but there is some learning required before you can realize its full performance and capabilities.
The fact that you are going to primarily use it as a base unit will avoid some of the instability issues that arise (unfortunately) with it when you go mobile; all related to the problem addressed by the first mod I just described.
So enjoy the rig and let me know how it works out!

Pete,
I haven't read all of the many posts on this subject
but your problem could be that the center of the ATAS
is not making good contact when seated in the antenna
mount. May be corrosion from water or just not enough
"spring" in the walls of the female portion of the
mount to make 100% contact. Just has to a be a small
amount of resistance to make the ATAS not function.

Someone else, several months ago had a similar problem
and I thought it was good enough to try and have had
good results. Search ATAS100 and the word "spring" in
the archives. Take a small spring the diameter of the
female part of the antenna mount. You may have to go
to a hardware store to find one. Cut it 1/4" long. Put
it down in there and then screw in the ATAS. This will
make a very "positive" contact and hoefully solve you
problem.

Tim,
That's exactly where I'm attaching the ground, on one of the side holes.
Have you found a quick way to disconnect the extension adapter that screws onto the front of the FT100? I've replaced the tiny screws with two about 1" long. I put one nut all the way to the screw head for grip (a wingnut could also be put there). Then I put two nuts about 3/8" from the end and tighten those against each other so they wont move. Locktite thread cement would work also. Then I just unscrew both 1" screws by hand when I want to detach the adapter. It works pretty well but I need a way to keep them from falling out of the adapter when not in use.

I beg to differ on this one. I had a fluke accident one time that took a radio out (even with it turned off) while jump starting.

With vehicles like they are now days... I never go direct to the battery. I never had problems with engine noise. ON the Suburban and most fords (rumor since I don't drive a ford) there is a Distro Block up next to the Firewall. There I have all my PWR wires with lugs connected there. These keeps CRAP off my battery to fight with if I need to jump start anything. This Distro Block seems to me be the best place because all the radios end here with the same GND and +. I then used a bolt that was next to the Distro Block for the GND all common ...

So running to the battery isn't a need. I have noticed that some of the Fords have a problem with IGN. noise becuase of the long run to the battery. To cure this drop the LONG run to the battery and come off the Distro Block.

BUT, if you absolutley have to use the entire length of the PWR wire and you don't mind fighting with trying to change antennas/coax/filtering trying to get that elusive computer and IGN noise out by all means go direct to the battery.

Moral of this story is just to use the shortest runs. Shorten your wires keep it neat.
Whats the saying?
Work smarter not harder?

Hi Pete

OAN
Do you have the negative cable run direct to the battery along with the

positive???
You really need to have both direct to the battery....

Good luck

# 14484. Re: [FT100] Digest Number 1249

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-03 18:54:30 UTC
From: Dan K Nelson
Topic: 14484  Message: 14484

I stumbled across an interesitng situation that might be of interest to other FT-100 owners. Last week, I developed a problem with my base SAT rig, so I decided to put the FT-100 on the base as a temp 2 meter all mode rig. This is the first time that I have used the rig for any length of time apart from the vehicle.

As I was engaged in a 2 meter SSB QSO, I happened to place my hand on top of the rig, and discovered that the chassis was almost too hot to touch! A quick check of the fans revealed that the fans did not seem to be making much noise, and a "wet finger" behind the rig detected a very small amount of fan exhaust. (Yes, the "fan mod" was done and working at the time).

I moved the FT-100 to my test bench to investigate a bit further. I had the rig powered up in receive mode on VHF, and the fans were running all the time in low speed, and kicked into high speed when the transmitter was keyed. Seemed to be operating normally, so why was the rig getting so darn hot...?

I decided to take a peek inside the rig, so I removed the top cover while the rig was still powered up in receive mode, and as soon as I lifted the cover, the fans immeadiately increased in speed and the exhaust airflow increased significantly. I removed the bottom cover, and got even more airflow out of the back of the rig...

The bottom line to all this is that the ventallation holes in the top and bottom covers are covered with a very fine mesh screen that will get clogged up with dust over time, and constrict the airflow into the rig. Even with the fan mod, the rig will then run dangerously hot. This condition is not readily apparrent by just looking at the covers, I had to take a good look at them under a lighted magnifier to discover the problem.

Once I found the problem, a quick trip to the garage and a couple of shots of air from my compressor through the back of the cover ventillation screens cleared things right up. When the covers were replaced on the rig, there was now no noticable difference in fan speed or exhaust airflow whether the covers were off or on, and the rig now runs cool to the touch in either receive or xmit modes.

So, it appears that it would be a good idea to check the rig periodically for this problem, especially in mobile operation/dusty environments...

# 14485. SWR & fan mod in Australia

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-04 09:57:43 UTC
From: Graeme
Topic: 14485  Message: 14485

G'day,

I purchased my FT-100 s/n 9D.... November 2000 and recently decided to get the mods done before the warranty runs out. The Yaesu dealer in Australia (Dick Smith Electronics ) gives two years warranty on Yaesu products.

I lodged my rig at a branch in Melbourne but the counter sales people wouldn't accept the descriptions of what I wanted done as the 'intermitant SWR icon' mod and the 'uhf/vhf fan' mod, so back at work I printed out the photos and descriptions from the FT-100 faq then returned to the store to lodge it again. I only had a credit card invoice for the purchase and didn't have the store receipt which is needed to lodge repairs under warranty. The store I was at contacted the branch where I bought the radio and got the receipt number from them, which saved me another visit to the store to lodge the radio.

The radio was lodged on 1st May and I received it back at the store in Melbourne 4th June.

The swr mod was done by soldering a solder lug to the adhesive backed copper strip (which was there when the radio was purchased)and positioning the screw hole in the lug so that a cover screw would pass through it when the cover was put on. The second point for earthing that was shown in the faq photos was not done.

The fan mod was done by the resistor method.

Cost: nothing as it was done under warranty and the radio was returned with a bonus MH-42a microphone. I'll return the mic to the store tomorrow as the tech is probably searching high and low for it.

Cheers
Graeme

Dick,

Bravo on your reply.

A friend of mine just told me a sort of "joke definition." You know you're talking to a real ham if he/she can:

1. Solder a PL-259 properly;
2. Properly tune the final of a tube-type transmitter;
3. Tune an antenna tuner to resonance.
4. Install separate transmitter and receiver to make an old tube-type station run
properly.

You can probably come up with all manner of other skills that separate the wheat from the chaff.

Based on that, we have to assume that a question like the one asked is coming from someone who is something other than a real ham. The only way we are going to protect the integrity of the hobby (lifestyle?) is to refuse to aid those who would violate either the law or the standards of good radio practice and procedure. If we do not police ourselves, the FCC will do it for us, or will, even worse, cause the ultimate elimination of amateur radio entirely.

If the questioner was simply ignorant, then I say to him that he needs to learn a bit more of what he was supposed to have learned in order to get his license. Really, this is not a joke. Simply cramming and then regurgitating the answers on the exam does not mean that one has actually learned anything about radio and electronics.

Someone couldn't find the receptacle to make some sort of an adapter for the mic on a FT100. It's a six conductor.

Subject: Re: [FT100] extended 6 meter tx?

Dick,

Bravo on your reply.

A friend of mine just told me a sort of "joke definition." You know you're talking to a real ham if he/she can:

1. Solder a PL-259 properly;
2. Properly tune the final of a tube-type transmitter;
3. Tune an antenna tuner to resonance.
4. Install separate transmitter and receiver to make an old tube-type station run
properly.

You can probably come up with all manner of other skills that separate the wheat from the chaff.

Based on that, we have to assume that a question like the one asked is coming from someone who is something other than a real ham. The only way we are going to protect the integrity of the hobby (lifestyle?) is to refuse to aid those who would violate either the law or the standards of good radio practice and procedure. If we do not police ourselves, the FCC will do it for us, or will, even worse, cause the ultimate elimination of amateur radio entirely.

If the questioner was simply ignorant, then I say to him that he needs to learn a bit more of what he was supposed to have learned in order to get his license. Really, this is not a joke. Simply cramming and then regurgitating the answers on the exam does not mean that one has actually learned anything about radio and electronics.

Ralph check out my photos in the Photo file section. Look at the ATAS on '01 Durango. I used a Rat shack CB mirror mount, did some drilling on the mirror mount and wallaa. No holes in the lease car. Also works great at 73.5 Mph, in wind,rain,snow and sleet. 40 meters no problem, The instant QSY to 20 or 17 mtrs is A OK!!

# 14496. FT100 Control Program (CATSPaw)

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-04 18:05:43 UTC
From: jordan0129
Topic: 14496  Message: 14496

i've just uploaded the latest CATSPaw FT100 control program Ver 0.95

This is freeware and doesn't expire.
This has been scaled to be viewable in an 800x600 window.

Go to the files section and look for catspaw.zip

Written entirely in Delphi, this will not cause DLL problems as it
has no dll's.

Distribute as you like, but please no alterations of any kind.

To install, unzip to a temporary directory and run the setup.exe.
To UnInstall, go to your control panel, select remove/add software
and look for Catspaw.

Donations, comments, suggestions are always welcome.

Topic: 14498  Message: 14498

That might be ok for a Ham in 1940 but I think a Real "He man" (or She Woman?) Ham (In 2002) ought to be able to do additional things like

Know which end of the soldering iron to hold! <grin>

Write microcode to "talk" to a PLL / display etc.

Operate a CAD Program to design a PCB and write a Schematic.

More important a Ham of ANY era should Know

THE AMATEUR'S CODE
I - The Amateur is Gentlemanly. He never knowingly users the air for his own amusement in such a way as to lesson the pleasure of others. He abides by the pledges given by the A.R.R.L. in his behalf to the public and the Government.

II - The Amateur is Loyal. He owes his amateur radio to the American Radio Relay League, and he offers it his unswerving loyalty.

III - The Amateur is Progressive. He keeps his station abreast of science. It is built well and efficiently. His operating practice is clean and regular.

IV - The Amateur is Friendly. Slow and patient sending when requested, friendly advice and counsel to the beginner, kindly assistance and cooperation for the broadcast listener; these are marks of the amateur spirit.

V - The Amateur is Balanced. Radio is his hobby. He never allows it to interfere with any of the duties he owes to his home, his job, his school, or his community.

VI - The Amateur is Patriotic. His knowledge and his station are always ready for the service of his country and his community.

# 14500. Intermittent Mobile SWR Problem

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-05 20:08:09 UTC
From: fhbixler
Topic: 14500  Message: 14500

I don't make posts often to the group but really enjoy reading the tips and tricks that everyone comes up with. Now I have an interesting problem of my own.

I travel often and always take my FT-100D out of the car and carry it along. But it seems like everytime I remount the radio, it works differently. Main problem appears to be with the SWR. Yaesu did the SWR mode and the HF antenna I use on the car is the ATAS.

Through experimentation I found out that the real problem has to do with the routing of the coax. Depending on where the coax is laying either the ATAS will tune all, one, some, or none of the bands. I can move the coax 6 inches to one side and the tuning properties will change.

Since I have a separate 2M/70cm antenna the situation is the same. This antenna has been tuned separately by an antenna analyzer and depending on where the coax is laid I either get a 1.1 SWR or the SWR goes sky high. This antenna, by the way, is a 1/4-wave mag mount.

The FT-100D is remote mounted in the rear of a Volvo Station Wagon and the ATAS is mounted on the hatch. The control head is mounted on top of the dash. I have a good ground connection from the ATAS to the car body. Power is directly off the battery, both sides fused. The radio is not grounded but I have tried grounding it to the frame but this has no effect.

When this whole setup was first installed, I had rock solid tuning on all bands. Any suggestions on where I can look next??

Floyd/WD8DUP sends

Boy, I hope what you are describing is not the state of things in the rest of the Ham world. I've only been in Ham Radio for 6 years now, and I have found nothing less than courteous, helpful and friendly people. Sure, an occasional carrier may occupy the airwaves, but profanity and vulgarity have been nonexistant. Where I live is not densely populated (Beaverton Oregon. Just on the outskirts of Portland), perhaps that's why I haven't encountered the crud that you have, but perhaps, just perhaps I've met people who adhere to the what the true spirit of Ham Radio is all about while you have been misfortunate enough to to meet the few bad apples in the bunch. If you have truely left the ranks of Ham Radio I'd like to invite you back, the water's fine, just watch out for the holes.

Hi Floyd

You might want to check the pigtails. It seems like I remember something
about that in the past. With all the in and out you might have made them
bad by them flopping around.

Anybody got a chart of the resistances one should see at the control box end of the rotator cable for this animal? I'd be highly obliged for a scanned copy or typed paraphrase! I'm using it to point my FT-100 signal to various places but I don't know where exactly 'cuz I think the rheostat in the bell housing is inop. Need the resistance values to check that before I scramble up the tower and muscle the rotor off to where it can be worked on. Tnx in advance es 73!

From: fhbixler
Topic: 14500  Message: 14505

Tks for the comebacks.

Well Tim I can say that the SWR mod has been done but Bob's idea is a good one. I guess it is possible that both pigtails could be bad since moving the coax cables would move them as well. I haven't really noticed how the pigtails are connected inside the radio. I would assume their associated ground connections are individually soldered but the radio does get moved around alot.

I am sort of leaning towards a problem with the length of the coax. I remember reading on one of the mobile web sites that screwdriver antennas can be finicky with the length of coax being used. The suggestion was to try different coax lengths. Right now I have a 6-foot length connecting to the pigtail off the antenna mount. I will try this tomorrow.

Another idea has been popping around my head if the possibility exists of a "leaky" coax connector. There is another common point to all this and that is the PL-259 to BNC adapter I'm using to connect V/UHF from my mag mount to the radio. Just a hunch. This will be easy to try too. I have a duplexer that I used to use that I can hook up and use the ATAS for 2/70.

I'll let you know how this comes out. Otherwise I guess I'll have to open the rig up and look at the connections to ground for the pigtails. It is a possibility that they're both loose.

Floyd/WD8DUP Sends.

The FT100 is famous for it's "SWR problem" which ended up in a recall. Yaesu doesn't like to inform customers about it. Ignoring customers is a Yaesu speciality. The problem is feedback internal oscillation and cannot be cured by changing antennas, better ground etc. Even worse news; Yaesu "service center" needs to do the factory mods. and the problem will only get worse. Factory service in California MIGHT get your radio back in 4 or 5 months. I'm serious!

Try calling them, emailing them or writing them. They will act like you don't exist.

At this point you can try and get your radio back, unmodified, so you can get 75 bucks trade-in from AES on a 706 which works and is serviced by the parent company.

This is based on personal experience and 40 years as a ham.

Good Luck.--- In FT100@y..., n4xeo <n4xeo@b...> wrote:

The FT100 is subject to serious design flaws. It will not be serviced by Yaesu under any circumstance. Be smart and pay a little extra for an Icom or Kenwood or buy one used.

YOu know what they say about opinions.

I have yet to find anything built by men that does not have flaws in design and/or execution. That does not mean that it is not a good piece of equipment. Take this country for example. FAR from perfect, yet still worthwhile.

Don't make your decision about a rig based on one person's idiosyncracies or preferences. Read every comment you can find and average them out. Then do what I did. Go look at all the different rigs and buyt the one you like best.

The FT100D is a great rig. That is based on 43 years as a ham.

highly obliged for a scanned copy or typed paraphrase! I'm using
it to point my FT-100 signal to various places but I don't know where
exactly 'cuz I think the rheostat in the bell housing is inop. Need
the resistance values to check that before I scramble up the tower
and muscle the rotor off to where it can be worked on. Tnx in
advance es 73!

From: WB5MHA
Topic: 14382  Message: 14510

I would tend to agree that a Yaesu can be subject to normal problems like any other rig. However Yaesu service in California really should at least answer emails (none out of 10) letters (I tried that too) and phone calls. So far they have had my ft100 for over 2 months for warranty service. UPS lists "Adrian" signing for the radio's delivery. That was in March.

If a product has problems a company should stand behind it or at least answer communications from customers.--- In FT100@y..., W6MDK@A... wrote:

My comments were not in response to Yaesu's apparent customer service problem. There, I would agree, there is NO excuse. The rig is probably no worse than anything else on the market. The company apparently lags far behind others such as Icom.

Those reading this forum should keep in mind that the various "lemon laws" that have been passed around the US apply to radios as well as cars. If you can't get the company to fix it, make them replace it.

Yaesu service extends beyond the FT-100. I ordered a volume/RF gain control from their parts department, they said it would be sent the next week. A month later I called, they apologized and promised delivery "next week" for sure. It has now been another month and nothing heard from them. No more playing with them, selling it on eBay "as is" probably at a good loss.

From: Eric van de Weyer
Topic: 14500  Message: 14516

Alternatively, do the mod yourself. there is plenty of info about it on Lee's FAQ page including some excellent pictures and it can be done in less than half an hour.

I did my own very shortly after I got it and I did it for one of the members of our local club at our last project day (last Saturday) and it took me about 20 minutes to do both the SWR mod and the fan (resistor) mod.

It takes less time to do it yourself than to pack it up to send it off!

Maybe I should start up a mod service whereby you guys send your rigs out to me here in Australia, I mod them and then send them back. For a price, of course. Would probably still be much quicker than you guys sending them back to wherever you do in the US. (Just JOKING, don't get any ideas!)

Subject: [FT100] Re: Intermittent Mobile SWR Problem

The FT100 is famous for it's "SWR problem" which ended up in a recall. Yaesu doesn't like to inform customers about it. Ignoring customers is a Yaesu speciality. The problem is feedback internal oscillation and cannot be cured by changing antennas, better ground etc. Even worse news; Yaesu "service center" needs to do the factory mods. and the problem will only get worse. Factory service in California MIGHT get your radio back in 4 or 5 months. I'm serious!

Try calling them, emailing them or writing them. They will act like you don't exist.

At this point you can try and get your radio back, unmodified, so you can get 75 bucks trade-in from AES on a 706 which works and is serviced by the parent company.

This is based on personal experience and 40 years as a ham.

Good Luck.--- In FT100@y..., n4xeo <n4xeo@b...> wrote:

Maybe in some states, but not Ohio (our lemon law, while one of the strongest in the nation, is motor-vehicle specific). A quick Google search should tell for your state.

Sorry, I can't agree.

I have now had mine for about 6 months and it is the greatest little radio I have ever owned.

Sure, it has a couple of minor design problems but that is all they are, minor, providing you do the mods to prevent them becoming major by causing finals destruction.

Let's face it, when you are trying to cram so much radio into such a small case, you are bound to have a couple of hiccoughs.

When I was deciding on which radio to get, I was tossing up between the FT100D and the Icom IC706MkIIG. At that stage, the Yaesu won out on two main counts the first being that it was about 4mm less in height which meant that it would fit into the hole in the dash without any modification with the second being the price (about A$500 less at the time).

Since getting the rig, however, I have found my decision only reinforced by the reality if the radio's performance. The noise blanker works exceptionally well, certainly the best one I have ever come across. It is very easy to use mobile once you get used to it. This is probably true of most radios once you get used to them. The receiver is excellent, the transmitter works very well and gets great reports. Just yesterday on my way home from work I was chatting to a VE7 getting a signal report back that I was peaking to a 9, not bad for a mobile installation.

I am using the ATAS-100 antenna (which I had to import from ZL as the local Yaesu distributor in VK doesn't import) with it now although originally, before I got the ATAS, I was using an Outbacker Junior Plus with just as good results and I still use it on 80M with a coax switch to swap between the two. I am also running a separate antenna for 2M & 70cM.

I also use a hands free microphone system (Icom HS-15 or HS-51 from memory) which is on a gooseneck mount and is noise cancelling. I made up a little control box with a small preamp which transforms the impedance of the mic to work properly with the FT100 which has a fairly low input impedance which tends to load down the mic so much as to have almost no modulation, and a small box mounted on the gear shift which has ALL the controls normally available on the hand mic which comes with the radio. I have since added John Hanson's QSYer keyboard so I can also directly enter frequencies into the radio. this is great if you want to quickly hop to another channel to check it out or quickly check out what is happening on the local emergency service channel (yes, it's quite legal to listen in to them).

Anyhow, Jeffrey, from my standpoint, it is an absolutely fabulous little radio and, if I could afford it, I would be buying another two, one for our

other car (save having to swap this one over when we go away in the van) and one for in the shack. U fortunately, I'm just not that rich.

Subject: [FT100] Re: Preparing for Purchase

The FT100 is subject to serious design flaws. It will not be serviced by Yaesu under any circumstance. Be smart and pay a little extra for an Icom or Kenwood or buy one used.

I'm surprised about the comments on Yaesu service. I have sent in 3 different units and all were serviced and returned within 3 weeks. All warrantee work on problems I had caused. For me, super service.

I broke the little tab on the remote mounting pad and they sent me three replacements free. I dropped the FT100D control head and broke the volume shaft and knob off. No charge, 2 1/2 weeks.

Hey folks, the mfgrs. have their problems, too. Did you notice that half the MFJ staff was gone, and the reason they were gone? They were at Dayton, admittedly advertising and selling, but they were there to help, too.

Maybe you could call one of the 1-800 numbers, Cust. Svc., etc. and get some help. I sure wouldn't wait around trying to get an E-mail response. At least not for MONTHS!

I haven't really had any dealing with Yaesu yet, but get fine service from HamRadio.com, dxUniversal, and Texas Towers.

These folks are in business primarily because of us, and they will make an effort to be in business for us, as well. Their bottom line depends on it...+*

Any ham who wants to help see that the HF bands do not become like the CB/VHF bands.

>If he is he'll probably but the bands to good use than most hams out there.

That's a pretty broad statement based on your limited exposure to the hobby. Do you really have personal knowledge of "most hams" ?

>I gave up on ham radio due to the bad hams not the pirates.I got tired of the profanity,music >playing,dead keying on some one,and the fighting that goes on the air waves.

With only a Tech license, you have never experienced the best part of ham radio. It's a pity that you base your opinions on a very limited exposure to the hobby. Remember, the code test has always been a great "lid filter"... :>) I regularly work most of the HF bands and have never heard these people you speak of (unless you are talking about the few 2 meter repeaters that are home to a bunch of idiots. But even these repeaters serve a good purpose by keeping all the idiots in the same place.

>I quit the local club when a certain ham became the president,this guy is a hard core born >loser that is power hungry and felt the air waves was his and his alone.

Sounds like he is one of the "CB'er just got his Tech license" guys. Fortunately, these types are few and far between.

>Plus, you had to kiss his rear to stay on the air waves.I've turned him in seaveral times and >nothing happened.

How can this be (unless you were only working the local 2 meter repeater and this guy was the control operator) ?

By the way, do you even own an FT-100?

Depends on the state. I am not aware of any federal statutes that apply, and I suppose there are some states that have not enacted laws of their own.

At any rate, I suggest you call your state's Consumer Rights Department (or whatever the equivalent is) and have them point you in the right direction.

In California, if three (I believe) failed attempts are made to repair an item, the law kicks in. I had a Lincoln Mark VIII that had a fuel system problem that the dealer could not solve. After the third attempt, without my even so much a writing a letter, I received a letter from Ford telling me that they were replacing the vehicle. And they actually did it.

# 14528. My 1st ft100d contact today - antenna question

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-06 18:34:06 UTC
From: ken@nextup.com
Topic: 14528  Message: 14528

I ordered my FT100D from HRO last week, and passed my general upgrade on Tuesday and unpacked the radio last night. Neat little rig. I don't have any antennas up yet and waiting on some wire and anderson connectors to arrive before I put it in the car so I connected it to a 10m mag mount antenna sitting on a shelf here in the house last night to play around with receive a little. Wanted to figure out the SWR meter so I connected a tuner and cut the power back to 10% and tuned it up on 20m this morning. I'm in North Carolina and heard a Florida station calling CQ so figured it couldn't hurt.

So, my first 20m contact ever was with 10 watts and a mag mount antenna sitting in the house. Got good signal and audio reports.

Fun Stuff.

While I've got so many smart people listening, I'm thinking of doing a rover type thing in the mountains for Field Day. Not sure what type of locations I'll end up in but am looking for some type of 20m and 6m antennas I might have luck throwing up. Is polarization a big deal on 6m SSB? I know it isn't on the HF bands. Any suggestions on something for 6 or 20 that can be put up with 1 rope instead of 2 separated spots like a dipole would require, for example if I only have 1 tree to work with? Preferably something I can build in the next couple of weeks.

I don't have any problems with my FT-100, sort of. Had all the mods, no (problems). When I first got it, replacing a 706MKII after several other solid state rigs, it would only put out about 20 watts. A friend tried it on his set up and worked FB. Got an MFJ artificial ground, solved the problem, then redid ground system and almost full power but doesn't drive the AL-811 to anywhere near to full output, the 706 actually overdrove it a lot. Actually I guess I would like a less temperamental rig like my old IC-706 back. I'll be looking to trade up to a TS-2000 at Flagstaff, AZ hamfest next month. On my original contribution I forgot to mention that the problem rig was with my FT-757 not the FT-100, just looking at the service, I corrected this on a later submission. Thanks.

Yaesu service extends beyond the FT-100. I ordered a volume/RF gain control from their parts department, they said it would be sent the next week. A month later I called, they apologized and promised delivery "next week" for sure. It has now been another month and nothing heard from them. No more playing with them, selling it on eBay "as is" probably at a good loss.

# 14530. Pirates who cares? I do!

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-06 17:50:48 UTC
From: J Craswell
Topic: 14530  Message: 14530

Sorry about the long length of this quote T.O.M. AKA :the old man" but it's interesting to see the Un-Politicaly Correct message to all Lids.
>Who cares if he is or isn't a pirate.If he is he'll probably but the bands to good use than most hams out there.I gave up on ham radio due to the bad >hams not the pirates.I got tired of the profanity,music playing,dead keying on some one,and the fighting that goes on the air waves.I quit the local club >when a certain ham became the president,this guy is a hard core born loser that is
> power hungry and felt the air waves was his and his alone.Plus, you had to kiss his rear to stay on the air waves.I've turned him in seaveral times and >nothing happened.

I hate to sound the sour note but people using profanity, playing music, on air fighting etc are not (in my humble opinion) Hams. These guys doing this rubbish are "at best" Lids not fit to wear our title. Pirates are "lids" without a license.

What about the LIDs? (by Jay Craswell W0VNE)
Lids, Lids? Vot iz diss LIDS? A LID is a poor operator. You know the type. They get a big kick out of jamming repeaters or operating illegally on Police and Fire Frequencies. One local ?genius? was making false destress calls on the Police channels with his improperly modified VHF station. This guy was a licensed Ham Radio operator!

Some of them are real characters with ?fake? southern accents. It makes real folks from south of the Mason Dixon line mighty angry. These LIDs are the guys who never ID or if they do they make sure it?s not understandable. They are the guys cussing and hogging frequencies on 75 and 20 metre phone. You know the type. They don?t spend much time listening because they are too busy talking. They are the ?sea lawyers? who give Ham radio a bad name with the FCC. A good fight over the air is what they live for. They are the comedians replaying what they hear on 49 MHz Baby Monitors and cordless phones over the local repeater. They grunt, squeak and do all manner of animal sounds to show how intellegent and charming they are. Because they are cowards all this is un IDed of course! It?s not policaly correct to call these guys what they really are so the original term Lids is what we use. So what?s the solution for these idiots? The Feds are hauling them in now in record numbers. And while most get a hefty fine and have all their expensive Radio Gear taken away, a few are cooling their heels in prison. One of the problems is how long it takes to revoke the license of some of these goombahs so it?s interesting to revisit the original plan to deal with this garbage. See what the first president of the ARRL had to say about Rotton Young Squirts a.k.a. Lids in the . . .

Rotten Young Squirts
By The Old Man (W1AW )

Feb 1932 QST Magazine
SAY, you modern Young Squirts! Listen to me.
In bygone years, when amateur radio was young and in the making, it was Unpopular to have a rotten fist, send with your feet or send too many CQ's. It was Unhealthful, very, to be outside the regular amateur bands. It was Sure Death to fake a call or send any kind of a false signal. There were three gadgets that were devised by the amateurs of those early days to keep Young Squirts constantly reminded of these three important don'ts of amateur radio. A Squirt who used too much of what we used to call "Lake Erie Swing," or sent with a slobbery fist, or cluttered up the air with too many CQ's, or garbled his call letters so they had to be guessed at, was called upon by a committee, the chairman of which was a big brute with a positive manner and who exhibited and explained the workings of an instrument known as an Uggerumph. A Squirt who was a band-jumper, or who failed to maintain an intimate acquaintance with a reliable wavemeter, was politely knocked on the head with a baseball bat, dragged out into the nearest sandlot, and subjected to a surgical operation with a thing called a Rettysnitch. The blood of each victim was allowed to dry on this tool. She's all caked up on the business end at this minute. The next time you meet old Fred Schnell ask him how many Squirts he butchered the first year or so after the War, with this Rettysnitch. He nearly wore it out. He was Traffic Manager in those days. Last but by no means least, a Squirt who even thought of using a false call, let alone actually using one, or used profane language on the air or who willfully broke up other legitimate amateur traffic, was taken for a certain kind of a ride during which an instrument of torture known as a Wouff Hong figured very prominently. No Young Squirt ever returned from one of these "rides." The Wouff-Hong was carefully wiped off after the affair and the rag used to do the wiping was forwarded to me for filing away. There are twenty five bales of these bloody rags in a certain warehouse at the present moment, and recently I have made arrangements to hire some additional space. Now, I don't want to be unpleasant or to threaten anybody, but by the Great Horn Spoon, you modern Young Squirts, you are riding for a sure fall if you keep on the way some of you are going. The other night I counted one of you send forty-one CQ's and then, to add insult to injury, you ended up with just two miserably sent slobbery signs that could not be read by Handy himself. Now I ask you -- why forty-one CQ's if two unreadable calls? What sort of a think-tank do you carry around that led you to sign only twice and rotten at that, if you thought forty-one CQ's were called for? Rut I must not permit myself to dwell upon your offense for fear this paper will get afire. Just, let me say that I've got my eagle eye on you and any moment you may expect to receive a call from my committee, the leader of which will take such steps as may be necessary to convey to you a clear and distinct idea of just what the Uggerumph is, what it can do, how it is operated and how it feels. Another one of you Young Squirts spent the other evening sending V's. You washed out a perfectly good rag chew for me and ditched several words from an important QST from W1MK.<- (*Note Pre war W1AW) And you, you rubber-head who did this, you are going to be hounded down and I'll see that you are made to eat every V in the dictionary. In the old days we would have boiled you in transformer oil. I reckon you are too young to know what transformer oil is. Well, son -- it's

hot, when it's boiling. Another one of you thinks it funny to send with your feet instead of your hand. It cannot be done, son, and it isn't funny. It's rotten amateur radio. Nobody can read your stuff, and what's the use of sending if nobody can receive it? If your stuff were to be taken down on a tape receiver it would bust the machine wide open and hurt somebody. There are only two characters in the telegraphic code. One is a dot and the other is a dash. You seem to think it fashionable to crossbreed the two. It can't be done without getting into trouble and you are in trouble because you are to be located and some dark night you are going to be yanked from your warm little shack and a certain committee will heat up a certain pair of irons and several real distinct dots and dashes will be branded upon that part of your anatomy which will remind you of dots and dashes every time you sit down, for the rest of your life. I am ashamed to say that three of you are suspected of using some other chap's call letters! On a certain occasion, of which I have record, one of this three had the gawd-awful bad judgment to use a certain Assistant Radio Supervisor's call, (Imagine such a thing, Old Timers!) I don't state what we intend to do with this one. Anyway, the whole bunch of you are slated for the Wouff-Hong, and Lord have mercy on you for nobody else will, especially for the poor unfortunate gargoyle who used the R. S.'s call letters. It will be my duty to attend to this squad and I have already sent to Hartford for the Wouff-Hong to be forwarded out here by air mail. You enemies of amateur radio will soon be hearing the old pre-war torture chanty, "Fe, Fi, Fo, Fum," A horrible example will be made of you for the benefit of future Young Squirts who are tempted to stray from the straight and narrow. After the committee and I get through with you your bones will be ground up to make breakfast rolls for me and the little wife, and I suspect that Kitty and the kittens will get parts of you. I have not decided yet what the torture shall be for those miserable whops who splash around in the ether and get afoul of the transatlantic 'phone bands. It's a serious offense. It gets all the rest of us in dutch with the Government and A. T, & T. No precedent exists because we did not use to have transatlantic radio 'phone. This matter is up with the Torture Committee of A.R.R.L. and as soon as something sufficiently blood-curdling can be devised we shall rig up the apparatus and bring you whops in. I am in favor of stringing all of you up by the thumbs in good old seafaring style, while somebody with a deep voice and slow delivery reads one of Handy's papers on Dynatrons and Methods of Monitoring Frequency, after which all the worn-out and inaccurate wavemeters in your Division will be crammed down your throats. The idea is to endeavor to make you "frequency conscious." I reckon it will conscious you up all right, especially about the time you feel some of those crooked condenser plates going down. One of the suggestions the Torture Committee is working on is to have Warner suggest to the forthcoming Madrid Conference the advisability of compelling all amateurs to eat at least one dynatron before he learns the code. It's a hot idea according to my notion, because if an aspirant for an amateur transmitting license knows what it is to eat a dynatron he will have acquainted himself with what accurate checking of frequency really means. Any amateur that gags much on a dynatron won't feel much like learning the code for the remainder of his days on earth. This idea, if put into practice, would choke off the supply of new non-frequency-conscious Young

Squirts. We should then have to deal only with the existing Squirts who don't know what accurate frequency means. Gradually we could Wouff-Hong these out of the picture. Then we should be able to live in peace and comfort with the Government and the A.T.&T., a condition devoutly to be desired, if amateur radio is to weather Madrid and if Warner is to retain his reason. This concludes my warning to you public enemies. It has been a long time since this old barnacle has opened his trap, but after things reached the pass where one of you Young Squirts pinched the Radio Supervisor's call, I had to speak. I am here to see that amateur radio retains its traditions, built in bygone years, when amateurs were loyal, law-respecting and upstanding he-Americans, who were proud of their fists both on the key and in the lawbreakers' faces, proud of their procedure, proud of their note, proud of their frequency, proud of their delivered-message percentages and proud of the splendid standing of amateur radio. The Uggerumph, the Rettysnitch and the Wouff-Hong have seved in the past, well and terribly. They can serve again. You present generation of Young Squirts are too young to know the past. It is not recorded. It could not be. But believe me, there was a past. You don't want to have the vengeance of outraged amateur radio wreaked upon you. It's too awful. So -- let this old crab's warning be heeded. Remember the traditions of amateur radio when it comes to fists, CQing, V's and using fake calls.

Fail not -- at your peril!

Hi Ken,

I have had very good luck with 50' of radio shack 22 gage speaker wire thrown as high up as possible (not necessarily vertical)and end fed with a tuner. You will also need a counterpoise cut for the band that you are using and elevated 2 to 5 feet above the ground. Alternatively, you could use a single 40 foot counterpoise. I have only used this configuration for 40 - 10 meters. Have not tried it with 6 meters.

73,

Joe - KB8BO

Blaine
Thanx for the info! I used it to find out that half of the wiper circuit IS working (and I can use a DVOM and conversion table to figure out where the beam is approximately pointed!) Now I'd like to try to modify the controller temporarily to get it to work with only half the data it needs...so if it isn't too much of a hassle and if you have the equipment could I talk you out of an image of the schematic for the T2X Tailtwister also? I thank you and my FT-100 thanks you too!

This seems to be a contagious disease amongst ham radio dealers, hi! Ordered
via internet an antenna for my FT100 from MFJ Enterprises in March and was told that my order had been placed on "back order" (whatever that means!). In May 27, after a second attempt to know what the position was for my order, I was advised that no reply would be received from their mail box until May, 22!!!
I am still waiting for a clue about my order. How is that for customer service?

# 14535. Super 100 and Good Hams

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-07 12:37:26 UTC
From: Freddy Thompson Bratton
Topic: 14535  Message: 14535

---

I think those that don't like the 100 should sell their radio, unsubscribe and go on their way. Leave the group to those who enjoy and benefit from all it has to offer. I seldom post but read religiously every day and have kept tons of notes of various ideas and problem solving techniques provided by "you'all".

I have two 100's and have no problems with them. They are my favorite radio's. I'm fixing to buy my son one for graduation from Syracuse University and one for my girlfriend for her birthday. There isn't a radio to compare when you go mobile. The proof is in the pudding and when you combine it with the ATAS 100, beat that for convenience. Try Kenwood or Icom's matching antenna. You will have to design it and sell it to them first. I'm not a Yaesu fan per se. I have an Icom 746, Kenwood 870, 2 Kenwood 850's and a recently acquired Yaesu 900. I am a salesman and certainly don't condone poor customer service but it won't keep me from using the best radio for my purpose. Yea, the mods need to be done------get over it. Whose perfect? This great site gives all the knowledge to do our own.

I have been a Ham for four years. I live in Memphis, TN and travel Arkansas as well. The "worst" hams I've run into are "ok". I haven't run into any really bad ones. Some I don't care to be around but that is personality not poor or illegal operating practices. We aren't permeated with trouble makers. Seldom does anybody want to jam the repeaters and in the thousands of contacts I have made in hundreds of countries, I haven't been treated more poorly than a sarcastic word or two.

Oh the other hand, I have had to learn to remember my friends outside the hobby because I have been befriended by so many fellow amateurs. I have become close personal friends with many. My girlfriend was drawn to the hobby strictly because of the people we met thru my participation in the hobby. That lead her go get her license.

I can't help but come to the defense of the FT-100 because of the endless hours of pleasure and trouble free hours I have with it in the car as I visit customers. I've tried the others and I'm where I need to be. I know many who have and used both the 100 and the 706 and none of them favor the 706. I tried it and sold it. Fine radio-----not as good as the 100 in my opinion and no matching antenna.

I won't comment any more on the good hams I've met everwhere I've travelled. I don't have to energy to type that much and you don't want to read that much.

Let those who enjoy this thread and radio have fun sharing and helping each other and let the others go to another thread where they can possibly find one they enjoy as much as we do this one.

From: lhlousek
Topic: 14539  Message: 14539

My understanding if the term "LID" is that it applies to operators who unintentionally cause problems for others by
their use of bad procedures or having poor operating skills. We've all had our LID moments at one time or another, like
accidently transmitting on top of the DX station when meaning to transmit on the split frequency, or forgetting to turn
off the RIT or SPLIT when calling CQ or replying to a CQ, etc.

Discourtious operating or causing malicious interference goes way beyond being a LID. I would think terms like moron,
looser, punk, jerk, sociopath, or even criminal are more appropriate in these cases.

I have to agree. I have a 100D and it works great.
Had troubles using antennas. When I finally installed
the ATAS all the troubles disappeared. Should have
bought one in the first place. Works great. I also
have a FT-8500 for 2 & 440 and a FT-1500 for APRS. All
working fine.

Freddy, get with it!
;-)

Just do as I do, I have a standing offer of
100.00 US (Good old USA cash) for any
FT100D in good condition, with it's
accessories, box, and instructions.
(Regardless of the swr/fan/mike mod status.)

Anyone who wishes to "get out", can do
so by just mailing me, KA2PKH, their radio
in the above condition, with the standard
accessories, and I will happily send them
a money order or check, for the one hundred
dollars US cash.
That's it!

Email me to tell me you're sending the radio:
tmaxwell@...

Don't forget to let me know where to
send the money.

Tim
KA2PKH
Box 8810, albany, NY 12208

;-)
;-)
;-)

Seriously though, I'll honor all requests.
Especially if they come before Field Day!

>
> I have two 100's and have no problems with them. They are my favorite radio's....>>>

There is your answer, you as well as I had "no problems".. But many did and they share their experiences here as well. Imagine if they sold their rigs and unsubscribed. Then we wouldnt know there actually were problems.. There are two sides to everything, even Hamming. Its good that we can share FT100 experiences, then we know the truth. Now thats more than Yaesu tells us.. Isnt it?

We are all here to make it work for everyone. Heck, I dont even own one anymore but I still post and offer help to those just coming on board. I like to see everyone enjoy the radio as well as I did. It makes me feel good to get others going and help them thru the kinks I had along the way.

If your radios work so well then someone here can make the argument that you should unsubscribe as you have nothing to offer to those that do have trouble, critisisms or questions.

I am not flaming you or anything, just pointing out that this group has many purposes. You have a purpose too>> Fostering newbies and helping those experiencing trouble with some facet of FT100 ownership. Present new ideas, mods, and assisting those who wish to make new friends along with forging your own relationships with other hams. This what it is to be a Ham/Amateur Op, to help others and get em on the air and provide whatever service you can to other Hams and the public in general. The FT100 is a great rig, sometimes it needs a little help to make it shine.. Thats where you and I come in..
Regards.. Richy N2ZD

# 14543. Known problems with original FT-100?

Hi All,

Has anyone ever tried to get power from the battery of a Ford Escort ZX-2 2002? The battery is on the driver's side and it looks as though the existing wiring comes in on the passenger side, but the engine compartment is so cramped, I can't see well enough to determine the path.

If anyone knows how to do this, I would be grateful for some guidance.

Hi Rick,

Look for an opening in the firewall to get a direct pair of heavy gauge color coded wires thru to the "cockpit" remember to grommet the opening if you must make a hole or if you use an existing hole make sure its well insulated against wire chafing. Do not run this rig from any other wiring in the car as most automotive wires will not support a full 22 amp draw. Run it directly to the battery and remember to place two fuses at the battery terminals in case those large wires decide to "mate" with anything on their way into the car. It is imperative that you run the radio directly from the battery if you want good results. Keep in mind that some Fords have noisy fuel pumps and may cause some noise in the RX. There is a fix if you have that problem, check with Pres Waterman as he has much experience with this. PS I think we worked FT100 to FT100 on 17m, are you in the service?
Good luck and remember to add the two grounds to the sides of the radio when you mount that puppy.. Regards.. Richy N2ZD

>
>
> [Non-text portions of this message have been removed]

Your low power output is most likely a direct result of the incorrect SWR indication. Its called foldback and radios do this to protect the finals even when the internal swr indication is wrong. I hope they go light on your wallet, but from what it sounds like, a cheap repair to the swr circuit is in order. I had this happen on an FT1000 a while back. I replaced a few diodes that were damaged by some static and it was dumping 200 watts as it should.. Good Luck.. Richy N2ZD

Hi Richy!!
Same here.... I am looking for a Ft100 (could also be one of the first models no probs with that)...

I have one in the shack (FT100D built in dec. 2001) and It works perfect (with the mic-mod done)

I need the second one for a ham-friend of mine, which want to install that super-little-mobile-rig in his boat (fisherman).

So all to you out there want to give away the FT100.... Let me know, we can make a good deal for sure!!!

73s and have a good weekend

OE5CSP Chris

# 14553. Re: Escort ZX-2 Install ?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-08 17:09:51 UTC
From: kb1flr
Topic: 14546  Message: 14553

Hi Richy,

Thanks for the info. My main problem isn't with technique, its with the Escort itself. Just getting to the appropriate areas (if I could locate them) is difficult due to how packed together everything is. I am currently working on a plan to train my daughter's hamster to perform some of the tasks, as he is the right size for this, hi hi.

Your call sounds familiar, Richy, but I was not in the service.

Thanks for the help and I will continue my search for a path from the cockpit to the battery. (I am picturing Ernest Shackelton for some reason, at this point.)

73 and I hope I can work you 100 to 100 mobile,
KB1FLR, Rick

Rick
Have you tried asking your dealer their recommendations? I was at Dayton and GM had a booth that showed recommended radio installation locations to prevent EMI etc. I'm sure that Ford does as well, although I can't find anything on their web site, an owner like yourself might be able to register and find out something.

Good luck,
Bob

>Discourtious operating or causing malicious interference goes way beyond being a LID. I would think terms like moron,
>looser, punk, jerk, sociopath, or even criminal are more appropriate in these cases.

>Lou W7DZN

I'm no model of perfection. I've been on the B VFO when I thought I was on the A once or twice. I hate to admit I drove around with the XYL with an open mic on the local VHF repeater. When I contacted the owner he laughed and said "Jay, this is why we call it AMATEUR radio." I use the term LIDs since we can't say what we REALLY want to say.

# 14556. Where is a place I can obtain a mic. connector(s)?

Yahoo group: FT100 (2002-01 — 2002-06)

From: kraftwerk1976
Topic: 14556  Message: 14556

Hi, all. I need to pick up a few microphone connectors for my FT-100. Are these called RJ-12? Anyway, I have found replacement microphones for the FT-100 (and FT-8000, incidentally, which have the same microphone.), but the mic. I ordered comes without a plug (yes, the mic. I ordered has the same diameter cord as the mic. I am replacing). Has anyone obtained microphone connectors for this radio? If so, where may I purchase them at? Thanks for any help you give me.

From: Eric van de Weyer
Topic: 14556  Message: 14557

Hi Adam,

yes they are RJ-12 connectors which are the same as used for telephone lines. They have 6 contacts. You can also get RJ-12s with only 4 contacts.

You should be able to get them almost anywhere but you will need the special tool to crimp them.

Regards....Eric VK2KUR

Hi. Thanks for the replies. When you went to greatcables.com, did you order the RJ12 connector for the solid connector or the stranded connector? I know the wires used in the mic. are stranded, but I thought perhaps that one connector might be better than the other. About all I could see was a bulk of 50 connectors for $20. Not a bad deal, but I only need about two of them (4 if I mess up, hehe). I looked in my Radio Shack catalog, but only saw RJ11, 14, 25, and 45. It looks like I am having trouble with a simple problem, hehe.

Did you adjust the ALC while transmitting into a dummy load? My manual warns that transmitting into a feed line/antenna while adjusting will skew the ALC readings due to reflected power. Give it a try.

Never a bad idea to take the radio apart, and resolder the connector to the PCB using a little fresh solder. Generally, although the socket is a mechanical device, they do not get flaky.

What happens is, inside there is a finger that makes contact from the radio to the speaker and the connection to the speaker is interrupted when you plug in the external speaker. But I think since both internal and external are flaky maybe it is the PCB connection itself.

One common misconception is that the FT100D is electrically superior to the FT100. Not true.. (Excluding the bells and whistles add-ons of the FT100D they are essentially the same.) They suffer from the same problems Up until the May 01 vintage when the SWR mod started to show up in some of those later FT100D model runs. There was a firmware revision in the FT100D which allows it to work (not intentionally though) with the "tune" button offered by another company (apparently changed to clean up some bugs when the head communicated with the main unit along with a CW character error.) The SWR problem along with the UHF/VHF final overheating problem does exist in all runs that I have seen. Maybe the latest 100D's have it now but noone has said anything yet. Knowing Yaesu's track record with this rig, it may show up within the next few years :-) They will add in these mods on warranty rigs (even out of warranty but check with Yaesu) but expect to wait until the next solar cycle to get it back.
The main thing is to get the fan mod in it as quick as possible, the swr mod problem rears its ugly head out of the box on some, and most will give up the RF ghost within a years time. Some not at all or not noticed or "believed" by the user but it will happen eventually.
If you buy a new one, its best to pop the top and bottom and see whats been modded, people here can help you identify whats done. If you buy a used one, try to see what has been modded or added to the rig before you buy it. The guy who bought mine was one lucky sonuvagun as it had all of the add ons and the mods to boot. Every report on the air was excellent. The trick is to make the radio right whether it needs it or not. Regular or D model is not important. When purchasing, making sure the radio works right is your first concern.

Also of interest is the FT-8900 quad band FM rig, which I missed at
Dayton since I spent little time in the manufacturers' area. Universal
Radio has a web page for it but no info until approved for sale by the
FCC, I guess. It's supposed to cover 10, 6, and 2m plus 70cm FM.

Should be interesting.

No problem, just have not done your home work. What you need is a simple RJ25 modular phone plug which is a six contact plug precisely matching what Yaesu puts on the mike cord. And, RS will sell you a pack of 10 for something like 3.99. Of course you must have the crimping tool too. RS has that too, but spend the extra bucks and get the metal one rather than the plastic one. Make certain it crimps both 4 and 6 Pin plugs. I just purchased these today, have confirmed they are identical to the original and am about to fix my mike cord. Good Luck! Bill/K3YC

# 14574. Re: Ext Speaker Socket

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-11 08:45:14 UTC
From: vk3qi2001
Topic: 14559  Message: 14574

It is interesting that someone has at last reported a fault similar to one that I reported to this group back in January 2001.

What surprises me is that no-one else has reported a similar problem in over 14,000 posts to this group!!!

In my case, it was the external key jack which gave intermittent connection whilst mobile. After much experimenting with a variety of 3.5 mm plug types from a variety of manufacturers (all with slightly different tolerances), I concluded that the vibrations whilst mobile, were slowly working the plug free (it is a stereo plug for dot, dash and earth). The PCB solder connections were FB.

Pulling the rig apart still did not allow me to tighten the socket fingers, as the PCB socket is virtually sealed.

MY FINAL RESOLUTION (rather drastic) was to remove the socket and add a permanent pigtail with socket, similar to the control cable for the FC20 or ATAS lead on the rig. In this way, I could use one of the more reliable and accessible in-line 3.5 mm sockets.

MY SUGGESTION would be to try the same on the extension speaker socket if this is going to be a continuing problem for you.

Access to the socket is by removing the lower cover, but getting to the socket connections is difficult as it requires either lifting the PA board, or carefully breaking the socket and using the existing wires from PCB to socket fingers as the connecting wires to the pigtail. The shield of the pigtail can be anchored to the inside of the case with a solder lug and the lead fed out through the hole where the socket was.

If you want any further information feel free to respond to:

prforbes@bigpond.net.au

Cheers

i had this same thing with with an icom and when i bought the matching speaker
for it i noticed that the plug on it looked like a sawed off stereo plug. it was also a
little bit fatter. i took apart my icom 746 my rigblaster and my yahoo 100d and they
all have this plug in i think its kind of a do all. it will work on
mono,stereo and the little bigger plug. maybe vibration will allow the
regular plug to move around from the heat and cold.

If you need to have a tool that crimps 4-6-& 8 pin RJ
connectors, Lowes and Home Depot carry them. They are
around $50 but sure comes in handy.

From: backhoefade
Topic: 14560  Message: 14577

Since one of the key differences between the FT-100 and FT-100D is the presence of the 500 Hz CW filter it should fit. But call HRO or the Cerritos service center to double check. Or get on CW (or SSB) and ask around. Find out the model number of the CW filter other people are using in their FT-100.

# 14578. Irritating fan noise....

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-11 16:19:02 UTC
From: asi_tek
Topic: 14578  Message: 14578

I am wondering if any one has noticed a loud metallic type whirly sound coming from their fans. It kinda sounds like a ball bearing drag sound and it gets loud from time to time then it quits and is just fine. It sometimes gets raspy and irritating. I checked out the fans and they are not hitting anything. No wires or the circuit board or anything. It sounds like it is coming from only one of the fans. Does anyone know the fix for this. By the way they are clean fans with no dust. Is that one fan about to die? I've only had the radio for about 4 months now and have hardly used it. The radio is the FT-100D with the resistor/ground fan mod done to it. Thanks for any help.

Neat thing about fans is that sooner or later they are all prone to the bearing noise you describe. The only real cure is to replace the fan.

I am getting ready to add the resistor on my FT-100 to keep the fan on for VHF. Radio Shack only sells 47 Ohm resistors. I thought I read a thread a while back that somebody had used a 47 Ohm instead of a 51 Ohm resistor. I assume that the 47 Ohm would work as well?? Any comments?

Hello...47 ohms will work ok or
pick up a pair of popular 100 ohm resistors and
twist them together (parallel) and you will have
a 50 ohm resistor. I did this to be closer to
the mod that you mention...

The resistor value is not critical. Some of us have used 100 ohms. I experimented with a resistor values between 33 and 147 ohms and found that 100 ohms worked well and the fans are significantly quieter than with ~50 ohms.

Use at least a 1W resistor.

The FT-897 seems fine, but I wish Yaesu would release a radio like Icom's 756 Pro II... The FT-1000 is a contester's style rig... Yaesu could do a pretty good job if they went for the computerized, super-DSPed, bells and whistles type rig.

The resistor goes from one of the fans (black side of the connector) to ground. The best place I've found is the rib that runs laterally acros the entire chasis. I made a loop in the resistor wire and placed it directly over the screwhole so that when the cover is put back in place, the attaching screw holds the loop in place without having to solder anything. That way, should I have to send the rig in for warranty service, I can remove the mod and not void the warranty.

Make sure you secure the resistor wire into the fan connector securely, and that you put electrical tape under the hot side of the resistor wire so that nothing shorts out.

To answer your other question, ye, the fan will now run all the time, at low speed. This will keep the rig from overheating when you are in V/U receive.

73,

Mike

That happened to me when I first got my new FT-100D. I fixed it by taking the rear grill off and then sliding the fans out. I spun them around a little, looked inside, and checked to make sure nothing would be sticking in them. Then I put it back in. that fixed it. I think it was caused by the fan leads just touching the fan's fins.

Also, these little plastic fans are notoriously unreliable... You may need to easily replace them from a computer / electronics store. Before you do that, however, peel the little paper label off of the fan and add a drop of silicon lubricant to the little axel. That usually fixes it for about 6 months or more.

I find that synthetic lube oil works best. Used to oil PC cooling fans &
radio cooling fans with a slot car bushing oil - never lasted too long
and would get noisy after some time. The bushing and bearing type fans
I've oiled with automotive synthetic lube oil have been running quiet
and haven't had to touch them again. One quart will last you a lifetime
;-) Actually I filled-up a small 1/2 oz. needle oiler when I did an oil
change oil in the xyl's minivan.

I ordered the FT-100D on the 18th of May from Gigaparts - wanted to grab the coupon while it was offered. Got the rig, listened for a bit to familiarize myself with the controls. Went to Tx. Nothing. It is on its way back to Huntsville AL. The reception on the rig was impressive. I got CW on 10m from forty miles away - mobile. SSB from Belgrade received in Connecticut like Ivan was in the same room.

The lack of quality control is unimpressive. It cost me twenty bucks to listen for a couple of days. Now I have nothing but disappointment with Yaesu and Gigaparts.

Gigaparts was aware of the no Tx problem that reappeared recently.

Interestingly, they were testing rigs that were going out as replacements but not first-time sales.

I am looking at the SGC 2020 now. Too bad Kachina stopped making the MP-25.

# 14593. RE: [FT100] Brand new - no Tx

Topic: 14592  Message: 14593

Well, I also got one that didn't Tx. Not only that but the rig was so hot to the touch just on Rx that you couldn't hold it in your hands for 10 sec. I bought mine at Dayton from AES and had them ship it to my house. It arrived in that condition. I called AES Cleveland and spoke with Rod, WN8R, who sold me the rig, and he told me to send it back. I did, and he sent me the new one. It's working FB in the mobile. He was a pleasure to do business with. I've never ordered anything from Gigaparts, as a matter of fact, never even heard of them until your post.

My advice, give the rig another chance.

# 14594. Re: [FT100] Brand new - no Tx

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-12 03:36:36 UTC
From: Michael Ziebell
Topic: 14592  Message: 14594

I too ordered my FT-100D from GigaParts. I have had no
problem with it. It does get a little warm in vhf/uhf
mode but not that bad. I don't think it's GigaParts
problem. I've ordered an gotten a FT-7100, it to works
great. Seems you just got a bad hand.
Hang in there,
Mike... KG6JMM

Topic: 14541  Message: 14595

Tim,

You have yourself a deal. The only problem is that Yaesu service cannot seem to find my FT100 that they have had since March. Also, they are unable to communicate via email so no luck notifying me of my rig's status there. The tech I finally got on the phone after an hour's wait said that the company had changed his password so he was unable to look it up in the computer. Finally, the billing clerk said she showed that for some reason I owed Vertex (not Yaesu) money since the warranty information was lost at Yaesu. However my rig and all it's paperwork could not be located.

The rig doesn't seem to exist any longer.

However, if you cut a check to Vertex for 105 bucks and send it to them you can pretend they returned an FT100 in time for Field Day---

Date: 2002-06-12 01:36:18 UTC
From: Norm, W3IZ
Topic: 14570  Message: 14597

Contesters are the ones that will spend big $$$$ on a super duper rig.
----- Original Message -----

The FT-897 seems fine, but I wish Yaesu would release a radio like Icom's 756 Pro II... The FT-1000 is a contester's style rig... Yaesu could do a pretty good job if they went for the computerized, super-DSPed, bells and whistles type rig.

# 14598. Re: Intermittent Mobile SWR Problem - Solved

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-12 10:27:57 UTC
From: fhbixler
Topic: 14500  Message: 14598

Thanks to all those who offered advice. I figured out my problem. As a review I was getting intermittant tuning problems with my ATAS-100 and FT-100D whenever I would remove and reinstall the FT-100. I noticed that just moving the coax a few inches would change the tuning of the ATAS.

My 100 has the SWR mod.

I did some experimenting with coax length, placement, etc. I remember reading that some screwdriver antennas have tuning problems and sometimes lengthing the coax can help. This helped me also. I experimented with lengths until I found the magic length of 10 feet. The ATAS now tunes solid across all bands.

I do still notice some waivering of the swr during transmission so I went to the web site I use for my source for mobile problems, www.k2bj.com and read up on my problems. Ground, Ground, Ground .... So my weekend is set for me to work on this also.

This is a great rig and I'm having a blast with it and believe me, with over 25 years as a Ham, I've gone through alot of rigs (I'm rough on 'em).

BTW there has been a number of these filters appearing on Ebay and have been going for very reasonable prices. $30-$40. I assume because the FT-100D comes with the filter, somebody has a surplus of these and they are clearing out at greatly reduced prices.

Hello,

I used this one at IARU Region I. Fieldday two weeks ago. I used FT-100 (100W) with FC-20 Antenna Tuner, Notebook Panasonic CF-71 (Toughbook), Toshiba Notebook and fill up accumulator on 12V all that on Honda EU10i in standby position on altitude 1632m ASL. There was no problem whatsoever with aggregate. Temperature was about 10 degrees C. I can't tell what was the consumption of fuel, because I used it only about 4 hours, beginning with full tank, ending with a little less, but still quite enough, so it is probably near the consumption, stated in manual. It is small, very handy, quiet nice looking aggregate. OK?

Best regards de Janez - S51JM

Replying to my msg. about SWR problems I just want to tell that the problems is gone!
I made the SWR modification by grounding as described in this news grou and all SWR problems are gone.

I have also made the FAN modification for fan running on slow speed on VHF/UHF receive (resistor mod) and this works exelent.

Hi Janez!
Hey super fast answer!!!

Its good to hear that it worked good on the fieldday my friend.
I have an appointment with my dealer here next week, I will try that
before I buy :-))))
I´d like to use also a small amplifier with approx. 3 to maximum of 400W
pep so this should be managed by the generator Janez!!

I will have nearly the same setup like you (FT100 + Acer Notebook) and
the amplifier in standby....

BIG TNX again Janez, and I will let you know if I buy it how it worked
ok??!!

73s from Chris OE5CSP

Have a nice day all!!

Ckeck this site if you not already have it:

http://www.mods.dk

Go to YAESU, FT100 and you will find "Thermal modification"
There you have photo of how to do.
I have done it my self and it keeps the radio cool.

This is another good site:
http://k0lee.com/ft100faq.html

From: John Spiceman
Topic: 14500  Message: 14606

The ATAS100 seems to be very particular. Mine worked beautifully right out of the box when attached to an MFJ mag mount on the trunk lid. I found that moving it from the front of the lid to the back, a distance of only 18", made a difference in SWR. In a very unscientific test, I had two stations listen for any signal strength difference. Both noted almost an S unit change from one position to another. It was almost hard to believe.

It would be very interesting to be able to see the RF lobe changes with position of the antenna. Also, in my situation, how the lobes change with a ground attached at the antenna base vs. no ground attached at the base.

Would the lobes change shape ???

If the antenna presents a 50 Ohm resistive load (or nearly), i.e. is resonant at your transmit frequency, then you shouldn't have to play with feedline lengths. But that's one way to swing a non-ideal load around and bring it closer to 50 Ohms as seen at the rig's output connector. It may be difficult to make this work at all you operating frequencies.

I suspect that I can kill the "SWR" bug with my mag-mount antenna set-up by adding some coax. Thanks for discussing it. The thing that bugs me is that I know that the "SWR" bug is really a 13.65 MHz spurious oscillation, so if adding a length of coax eliminates it, that tells me that the bug is still in there despite the fact that I have the Cerritos SWR mod. That means the spurious issue is still potentially there depending on what load is presented to the rig. Oh well; if I can add 6 or 8 feet of coax and that kills it that will be fine; just as long as it is permanently and reliably gone. I'll try experimenting with different lengths. Thanks.

I bought a "dead" FT-100 on this group and after replacing two SMT resistors
(And a DC:DC Chip that was not broken) got it working. I paid $300 for it
so all you guys who are annoyed with yours tell me the condition and maybe
I'll slap together a radio for my XYL!

That's good trouble-shooting. So what led you to the root cause;
just no DC power on one of the main busses?

Risky though, isn't it? Couldn't the whole thing be fried, or is that very rare?

# 14615. Euro spec FT100

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-13 09:18:19 UTC
From: Ian Foster
Topic: 14615  Message: 14615

Hi all,

As far as I can tell, the only difference in the various spec units is the microprocessor located just behind the bulkhead of the main unit.

I have just converted a Japanese market unit to a more open USA spec by purchasing a replacement microprocessor at a cost of approx $US20.

Some considerable care is required in the transplant but is worth the effort.

As a matter of interest, the JA version has very limited coverage on 6 metres and above and no amount of modifications will open the JA version up to the levels that most are used to getting.

A replacement CPU board is also available however the cost would be approx $US125 which is probably a reasonable price if you do not have a steady hand for removal and replacement of SMC's

My CPU was ordered locally and sourced from Vertex in Japan.

In essence, almost any spec unit will be ok if you are prepared to do a little work to make it suit what you want. So hunt around for the best price and do not close off options just because the spec is not what you want.

One last note and this and I think we've burro'd it into the ground as far as it will go:

I don't think that just the ATAS is touchy, I'd be willing to ask some of the other screwdriver owners in the group how their "first" installation went.

Anyway, I don't think you can filter out any internal oscillation by just changing the coax, so I still don't believe my particular FT has a problem. More than likely my remaining waivering SWR on transmit is due to grounding and I'm just gonna have to roll up my sleeves and go "fish".

Anyway, I mentioned before but the web site that I use for my source for solving mobile questions is www.k2bj.com. Also, I believe it was www.anntenex.com where I read that lengthing the coax can improve the tuning on some screwdriver antenna installations. Both good sites.

Hi, everyone. Just to introduce myself: I'm Frank van Wensveen, PA3GMP, living in Capelle aan den IJssel (near Rotterdam) in the Netherlands (JO21GW). I've got an FT100 which I bought second-hand for a very good price, but that voids Yaesu warranty so I'm on my own. :-)

I've just joined the list, so first I'm going to browse the archive on Yahoo.

73,

Frank PA3GMP

# 14618. RE: [FT100] Re: Intermittent Mobile SWR Problem - Solved

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-13 13:46:09 UTC
From: Eric van de Weyer
Topic: 14500  Message: 14618

I have had no problems with my ATAS installation.

I have a little Daihatsu Move with the FT100D mounted under the passenger's seat and remote head in the dash. The radio is mounted to the seat, not the floor.

The ATAS is mounted on a very basic right angle stainless steel bracket which is bolted to the aluminium track which runs along each side of the roof and is designed to take roof bars. I also have another mount on the opposite side which is for my Outbacker Junior.

The two coaxes run down to an antenna switch on the floor and thence to the radio.

For power I have two heavy duty cables coming from the battery into the passenger compartment. The positive goes to a set of fuses which then supply the various radios, outlets etc. and the negative goes to a (very) convenient bolt which is welded to the frame. I then take my power leads from this bolt and the fuse to the FT100D.

I have NO extra earthing at the radio and NO extra earthing at the antenna and it all works perfectly.

I have never experienced the SWR problem although I have done the SWR mod as well as the fan mod anyhow just as a precaution, it never raised it's head even before I did the mod.

This set-up has been working extremely well for months and I have worked quite a bit of DX with it. The only thing is that the ATAS is mounted up on top of the car roof so it doesn't have any metal body parts up close to it, they are all below it.

As an aside, I am figuring out the design of a new motorised mount for the ATAS which will allow me to tilt the antenna over into a near horizontal position when I want to enter a garage or similar low area as the new work QTH we are moving to has parking under the building and at present I have to stop and remove the ATAS before I enter - a pain when it's raining etc.

I love this set-up and only wish I had the $$$$$ to get a couple more FT100Ds and ATAS-100s.

Chas,
Make absolutely sure that the oscillation is really happening this time.
It might just be an external grounding problem. When I moved my 100 from a
car using two ball mounts, to one using a tri-magnet mount, I had SWR
difficulties and RF in my audio. I had to run a ground from the mag mount
to the hatchback cover, to the body of the car itself, using ground braid.
A clue was that the SWR changed drastically in rainy weather, which
provided a better ground due to the car being wet and dirty. I also could
not use the antenna at the back of the roof (where I thought it looked
better,) but had to put it in the center, where it is surrounded by sheet
metal.

Ok - I'll take the analyzer out to the driveway at some point. (I got an HP analyzer for seventeen bucks at our company auction! What a deal). I was considering adding a ground strap in any case to the mag mount base. I have a Honda Prelude so there's a huge 'hole' in the top of the car; the sunroof. That gives me plenty of access to the mag mount antenna when it's 'thunked' on the roof just behind the sunroof. I think I could run a short thick braid ground strap from the mag base to one of the bolts along the edge of the sunroof opening. Any ground should help. It's interesting because some days the mag mount works like gang busters but then other times (like the trip up the hill that prompted that one 'complaint posting') I simply can't shake the SWR problem, no matter where I place the mag mount. So between adding a ground connection to the base and perhaps toying with the feedline length I bet I can get repeatable, solid performance. (Knock on ground !)
Thanks for the ideas.

# 14623. RFI Problem

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-13 16:38:12 UTC
From: w6mdk
Topic: 14623  Message: 14623

I have what I would call a severe RFI problem with my FT100D/ATAS-100 installation, and was wondering if anyone has had the same experience and managed to fix it.

I have a proper installation (from everything I can tell). Tuning is flawless, with low SWR across the bands. I have a separate V/U antenna, and use the ATAS-100 for 40-6. BTW, the installation is in a
2002 Ford Explorer.

For the most part (at least on 40,20, 17 and 15) I have fairly severe RFI. It is not the fuel pump. It is either alternator or spark plug, I believe, as the pitch is directly proportional to the engine speed. The interesting part is that if I touch the whip of the ATAS-100 while the rig is in receive, the noise just about disappears. This does not happen if I touch a grounded part of the antenna, or any part of the rig itself. This leads me to wonder if the noise is being picked up through the DC line at all, or if there is some other problem. If it is not coming in through the power leads, I doubt it would be fixed by putting a filter in the power line, but I could be wrong.

One last thing - the problem is independent of the location of either the rig or the antenna. I have tried various different mounting schemes.

Any ideas out there?

73,

Mike

Have you ever disconnected the antenna completely to see if the noise went away. I had a problem with RFI indoors and disconnecting the antenna showed me it was radiating. Before I could call the local electric company through an accident I found out that my TV was the cause, all the way to just before driving into the garage (at least 40 feet!!)

Hello Mike,

How are you getting power to the FT100? Is it a direct wire to the
battery terminals? Did you tap into a fuse panel under the dashboard?
Did you connect a good ground from the hood hinge to the fender to
the firewall?

Good luck,

The FT does have some oscillation problems (which require the "SWR
mod" to tame them) but apart from that I have the impression that
these oscillations are connected to antenna tuning. (I use a dipole
and an MFJ-971 transmatch, I don't have an ATAS.) At least in my FT100
the oscillations are most common during antenna tuning when the
antenna is completely mismatched to the rig's output impedance.

I just went out and tried it without the antenna. Here is what found.

I have almost no noise when the antenna is not mounted. But I also have low noise when the antenna is mounted, but not tuned to the asame frequency as the rig. If the antenna is sat for, say, 20 meters but the rig is tuned ot 40, there is loiw noise. As soon as I tune the antenna, the noise level comes up.

Could this be simply a matter of grounding?

Mike

Does that mean that YOU DON'T have the service manual?

First thing I do when I get a new rig is order the
complete technical and service manual. Might never use
it but it sure is handy when you need it.

FT-847, FT-8500, FT-100D, FT-1500M, FT-2600M, ATAS, FC-
20, the 800 rotor, and one little Icom.

# 14633. Having problems connecting the HC5 Heil to my FT100D

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-13 19:31:30 UTC
From: 35IR184/35SD184/35LD184
Topic: 14633  Message: 14633

Hello!

Got my HC5 Headset from heil today, but it doesnt work....
I have the AD-100 Adapter, the AD-1-Y cable, so everything should work ok..

When I connect the small chinch to the adapter, the vox works (without headphones just the mic!)
If I connect the Headphones jack to the adapter (as stated in the manual) the radio immediately jumps over to "transmit" but it doesn□t....

So anyone made the same experience with it?? The mic and works 100%, and the headphones too (tested on my HIFI set at home)... But not altogether on my FT100D ... :-((((

Anyone has some advise for me what to do before calling the dealer in germany????

TNX a lot

I haven't been following the thread but based on what you just wrote I would conclude that you have a radiated EMI situation rather than a conducted one, although you might have a bit of the latter when your vehicle is running. What your simple tests have proven pretty well is that the noise you're hearing is entering via the antenna. That may sound like a rather trivial deduction but it's the first basic question for trouble-shooting noise; you need to determine if the "path" is conducted (i.e. via DC power lines or other conductors) or radiated (i.e. via the antenna). There are cases of radiated "cabinet" susceptibility whereby the RF interference gets in directly throught the equipment cabinet (chassis) but your radiated input is largely via the antenna input. That said, your point about the noise level rising when you tune the rig/matching unit to the receive frequency indicates that you have a broadband external noise source. When you tune your setup to the receive frequency you're just optimizing the receive system for that frequency, so the noise level into the front end rises. Here's what I'd try next - take a drive out of the local area to a spot you know about that's far from any power distribution lines and commercial broadcast stations. Even commercial AM broadcast stations have a quantified noise power spectral density that extends above and below their desired transmit signal. I'm referring to the noise floor of their transmitter chain, including any final RF filtering, rather than the fundamental signal sidebands. Generally you will suffer most from power distribution related noise in most areas. So now you have an excuse to take a country drive. I'll be curious to know how quiet you find it.
Once you confirm that the noise is all about your property you can use a common portable AM broadcast receiver to track down the source. If you have an old AM radio that has a somewhat 'directive' ferrite rod type internal antenna that will be your RDF unit, more appropriately called an NDF unit in this case. Good luck.

From: W6MDK@AOL.COM
Topic: 14623  Message: 14635

Dear Charles,

Your conclusion is anything but trival, and I thank you for it. SOmetimes what seems obvious to others is not obvious to the person having the problem.

I am going to take a ride up to Mount WIlson (about 25 miles from where I live). This will get me away from almost everything, until I actually get to the mountain. There, I will be subjected to about every form of RF you can imagine. But the road up is isolated, and in the shadow of the mountain itself.

I'll let you know what I find.

I really DO appreciate all the help. Thanks to all whoi are responding.

73,

Mike

Be aware that anytime you change the country setting (even if you put it back to the initial country it was set to) you will wipe out all your custom settings such as RCW, mode choices, beep on/off, etc. In other words it will revert back to all the original factory defaults. I'm not certain but I think you may also wipe out all your stored frequencies. Someone else can confirm that.

Well I finally got my ft-100d installed in my Toyota 4runner. It works flawlessly! All of the mods have been done except the mic mod. I'll do that soon along with purchasing a Clearspeach speaker. Also, to whom it may concern, I have NO RFI problems in my toyota.YEAH!! This is a great rig!! In closing I'll say 'We be hammin' and i hope you like hammin' too!!'(ala Bob Marley)

# 14639. Intermittent VHF TX

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-14 06:24:40 UTC
From: gedoz
Topic: 14639  Message: 14639

It hasn't happened in the last few days, but this is the scenario...

I'll be talking with someone on a repeater, and then after a transmission they'll tell me I'm not making it. Then for a little while after, the radio will not transmit. It says it's transmitting, at full power even, but there's no signal out from the radio (this was confirmed with my HT's receiver in the vehicle). Then, it will start working again.

This does not happen after extended use. It usually happens within a few transmissions of the first one made. I really doubt it has anything to do with overheating. And the fact that the radio switches to TX, but doesn't transmit, rules out a microphone switch problem.

So...any clues anyone?

Congrats, my frind. It would appear that the Explorer takes the RFI prize. Its one I'd rather have go to a different vehicle. At least I have a real challenge on my hands.
Seriously, this proves that this rig is no worse than any other complex piece of equipment that has bewen designed and built by man. In fact, I challenge the complainers to design and build a working prototype of a similar rig that is without sin. Let that individual cast the first stone.

By the way, if you have any older, tube-type equipment, I have a surplus of grid leak drip pans that may come in handy, hi! hi!.

Seriously, I am please that your has worked out so well. It means the rest can be perfected, given a little knowledge and understanding, tempered with some patience and good humor. CONQUER MY RADIATED RFI PROBLEM I SHALL..

73, and happy mobile DXing.

From: Paul Manuel
Topic: 14639  Message: 14642

Steve,
It sounds like your rig is dropping into a spurious transmission. It is putting out a carrier, but not on the intended frequency. Mine does this occasionally on 440 even though the spurious mod is done.
In my case, the SWR indicator goes up at the same time, indicating an out-of-band spurious signal. Does your SWR indicator rise?
By the way, keep an eye on this situation--it can lead to destruction of the final if you transmit too long with this happening (and the repair from Yaesu is so expensive, its probably not worth doing.)

Floyd,

If the "waivering SWR on transmit" only occurs when you are moving, then you are probably just seeing the tip of the ATAS-100 moving around and slightly affecting the SWR. No worries on that unless you're whip is too close to the car body. If you were to take a ground mounted vertical and lean it over while you watched the SWR, it would also change as the antenna moved in relation to its ground plane. Ground plane is the effective ground under each antenna...car body or real ground.

Good luck. It takes a few attempts to get a mobile installation perfected but it is well worth the trouble to make these little antennas play up to their full potential, which can be quite potent when done right!

You are making an honest mistake. The connector on
the adapter that looks like an earphone connection is
actually for a PTT switch. You have to plug the
earphone lead into the usual earphone connector on the
FT-100. It will require another adapter. 1/4 to stereo
plug.

A point. I've noticed the steadily increasing
"noise pollution" with each generation of
computer monitor. I went from a 15 inch,
to a 17 inch, and recently to a 21 inch. All
have been Trinitron monitors. Each time the
interference increases.

Around you neighborhood you may find,
if it's reasonably populated, that because of
increased computer usage, your radio
spectrum may be quite crowded with "pollution"
similar to the light "pollution" that amateur
astronomers have been complaining about for
years.

I've taken a meter to my monitors, and while
they may be well shielded to the front, back,
and sides, they are lacking at the bottom, and
top. This despite so called the so called
"Swedish Standards" (for reduced radiation.)
I do realize that monitors of today are better
at protecting their users from directed radiation,
but that says nothing regarding the remaining
radiation leakage...

Since FT100's are so mobile, it seems that
they are the first to encounter band spanning
pollution in the field.

The D model also has the higher stability oscillator and, I believe,
a CTCSS (or some-such) decoder; these two items were extra options
for the non D model. So basically four differences in all, ignoring
the raised chassis top of the D, a physical difference.

# 14653. FT 100's

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-14 23:05:05 UTC
From: Alan Gault
Topic: 14653  Message: 14653

Hi

Given the recent replies to my questions can any one point me in the direction of dealers in US or Canada who will ship me a rig and antenna to Northern Ireland? Many thanks in advance.

Alan

# 14654. FT-100D on 7.025 / 14.025

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-14 23:31:34 UTC
From: backhoefade
Topic: 14654  Message: 14654

I'll be hanging around 7.025 and 14.025 tonight (Friday night) so hopefully I'll hear a few other FT-100(D)s. We can move to SSB after making CW contact.
Have a good weekend and 73 to the group,

N6AF Chas (Northern California)

# 14655. Re: [FT100] Re: (FT-100D) yo mun, we be hammin'!

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-15 03:48:09 UTC
From: cherokeeguy777@aol.com
Topic: 14638  Message: 14655

FYI. The ATAS is mounted on a Yakima tube rail for my luggage rack. It is about half-way up (from front to rear) on the passenger side. I have some 10ga wire attached to the bracket and run just inside my rear door for ground. On the rig, I've also got some 10ga wire from one of the mounting bracket holes to the floorboard for ground. WE BE HAMMIN'!! Still need a good 2m/70cm antenna to really finish the job right.

# 14656. Help Dead 2m Rx!

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-15 04:30:04 UTC
From: vk2qf
Topic: 14656  Message: 14656

Suspect my secondhand FT100 has a blown Q1005 SGM2016, can anyone on this group locate this device so I can make some measurements around it and inject some signal either side of it. This is prior to a service manual I guess!

Nev VK2QF.

# 14657. FT-100 back from Yeasu

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-15 05:28:16 UTC
From: G. L. Richmond
Topic: 14657  Message: 14657

Hello All,

Well, after 3 months in the hands of Yeasu .. I finally got it back.. 96 days later

Many calls to them to track the progress of the Mods and alignment check... Plus being ONE of many reading Chip the riot act at ham-Com in Dallas, for the long delays for any repair work regardless of radio being in or out of warranty...

Got a call this past Monday for Yeasu to advise that the Ft-100 was on its way back..

Normal rate for 1 hour on the bench is $70 dollars an hour... Since they were taking so long to get the radios out, they charged only $35 dollars and tossed in 3 day shipping...

So far, everything looks OK... only time will tell... Took Pics before the radio left my hands, and compared them to radio since return... looks like everything was done per request and per what Yeasu said they were gonna do..

From: ft100guy
Topic: 14647  Message: 14659

Yes and no, there is a firmware difference between the two.
Communication between the head unit and the main radio were changed.
If I remember correctly this was brought to our attention by the guys
who make the tuner thing for the radio, they deemed it roadworthy on
the FT100D but not the 100, all in all they are in fact the same sans
options..
Regards.. Richy N2ZD

Gil,

You might try wrapping the speaker leads around a toroid or two. Also, if accessible, try putting a small capacitor from the speaker leads to ground.

# 14664. ATAS-100 will not tune 40 meters

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-16 01:36:12 UTC
From: ng3f
Topic: 14664  Message: 14664

Hey, I need some help. I just installed my FT-100D and ATAS-100 on my 2001 S10. Everything is working fine except the ATAS-100 wont tune up on 40m.
I added and extra ground to the antenna mount as well as to mounting bracket
of the FT-100. The top of the base of the ATAS-100 is level with the bed
of the truck, but the whip is completely clear even in the fully retracted
position. I do not have a cap on the truck.

Thanks in advance.

# 14668. Re: Ext Speaker Socket

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-16 06:11:28 UTC
From: cat100bob
Topic: 14559  Message: 14668

Have the same problem here. As a temporary 'fix' I went to Radio Shack and got a gold adaptor. It fits tighter than the standard plug. I had to put a stero plug on the external speaker lead though, and wire the tip and ring together, as the Radio Shack adaptor was a mono to stereo adaptor.

I don't think that the problem is due to an intermittant solder connection between the PC board and the speaker socket, but rather fatigue in the metal contacts in the socket.

I will probably do the fix recommended in another reply - leave the original socket in place and bring a pigtail lead out the hole for the socket. I'll probably wire directly to the internal speaker as I don't care that the internal speaker remains on when I plug in an external speaker.

From: n4ado
Topic: 14664  Message: 14670

Yep, I'd say that was your problem. I just looked at the pictures of your truck. Take the 2 meter antenna off of the roof and put the atas-100 up there in it's place. You'll find that the antenna will work better on ALL bands. Be careful about mounts too! Most commercially made antenna mounts are not strong enough for this antenna. I've had two Diamond mounts break on me while i was driving down the road.

although I seldom work 40 meters, I do work 20 and 10 a lot.
I have been using the ft-100/atas-100 since February, 2000. I have: an FT-100, an FT-100D, and an FT-847. I have used them all with the ATAS-100 and found them to work well if you keep in mind that the Antenna is the most critical part of the system.

let me know if I can be of further help.

73's de N4ADO.

# 14672. Can the FT-100's S-meter be improved?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-16 13:48:32 UTC
From: Frank van Wensveen
Topic: 14672  Message: 14672

Much as I like my FT-100, I must say that it has about the crappiest
S-meter I've ever seen. The full scale sensitivity can be adjusted
through one of the F-menu options, but even then the indication is
completely worthless. I tried to calibrate it, but when I saw the
S-meter jump from S1 to S7 on a single 6dB input signal increase, I
gave up.
Is there anything that can be done about this?

73,

Frank PA3GMP

From: Dick Thompson
Topic: 14658  Message: 14673

Gary, I hope I'm wrong, but I bet that you won't get a reply. Most of the guys on this reflector have calls and they use them. Those that don't generally have something to hide and chances are that they are operating illegally. If the guy wants to transmit on the MARS frequencies he needs a MARS call. He can listen without making any modification to his rig.

Like I said, I hope I'm wrong, but I'd bet that Shaun doesn't have a call, never did and never will. I'll apologize publicly to him if he comes up with a call that can be confirmed.

73,

Dick

# 14674. Re: [FT100] rx/tx frequency mod

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-16 15:11:56 UTC
From: Dick Thompson
Topic: 14658  Message: 14674

Shaun, first things first..., do you have a call sign? If so, what is it? I assume that the TX/RX mod is for the MARS frequencies. Do you have a MARS call? If not, why do you need the modification? You don't need the mod to "listen" on any frequency.

I ask these questions because we have had a lot of pirates on this reflector who want to make all kinds of mods to their radios and none of them can come up with a verifiable call, let alone a MARS call.

I hope I'm wrong and that you are legally licensed. Are you?

David,

It is undoubtedly radiated from the vehicle itself. It doesn't matter where I am with the car, the RFI is the same. I'm afraid I have to do more tracing and hope I find a source that has a reasonable solution.

Mike

# 14678. Re: [FT100] RF into speakers

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-15 22:55:34 UTC
From: Norm, W3IZ
Topic: 14661  Message: 14678

Hi Gil.
First make sure the rig is grounded at the chassis. Then make a choke at the feed of the antenna by coiling the coax in the trunk about 6 or 7 turns 4 inches in diameter. Next use ferrite on the speaker lead as close to the speaker as possible. All grounds should be as short as possible and that shoul ddo it.

# 14679. Re: Escort ZX-2 Install ?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-16 04:56:54 UTC
From: kc0ejr
Topic: 14546  Message: 14679

Hey Rick,
I own a ZX2 also, and what I did was remove the inner fender panel. Use a putty knife or something thin and rigid to pry behind the plastic screws as you remove them. There is one way up in the top of the strut tower (8mm hex I do believe, not a phillips) that is easy to miss. Then I poked a hole in the boot for the main harness coming through behind the panel and route the wires through the square hole going into the engine compartment. It's a bit of work getting to the wires under the dash. Make sure you push them through from the outside. You may have to use a coat-hanger to poke through the foam seal on the inside. The harness is way up so you almost have to be on your back under the dash. With a little patience it can be done.

And for running to the back, just pry up evenly on the rocker-covers and they will pop off. Most other interior panels just require removing the pins. Use a very small screw-driver to pop the center pin out then remove the retaining pin.

I spent the better part of an evening working on this. About 4 hours if I remember right, but I was also using 8ga amp kits. I got 2, 1 red for pos, and 1 blue for neg.

Hope this helps.
If you need any further help you can email me direct. My address is listed on QRZ.

73 and good luck.
Bill, KC0EJR

Here is a very well-done Ham Radio web page I found that has FREE
Alinco manuals for over 150 of their radios and accessories. They are
all free and all are downloadable too. This guy has got everything!!!

http://www.ab7sl.com/index.html?row1col2=links.html

# 14681. Re: [FT100] RFI Problem

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-16 19:22:17 UTC
From: W6MDK@AOL.COM
Topic: 14623  Message: 14681

Well, I am now at a loss as to what to do. I have grounded everything with 1/2 inch ground strap. I even tried grounding the hood to the chassis, as was suggested. I still get bad spark plug and/or alternator noise. It is, without question, radiated, as the grounding has not reduced it one iota, and the noise totally dissappears when I touch the whip on the ATAS-100. Obviously not a practical long-range fix for the problem.

Any further suggestions out there?

# 14682. AB7SL.com S P A M

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-16 21:44:11 UTC
From: cardealers
Topic: 14682  Message: 14682

I am sending this to the lists I am on regarding Ham Radio. I guess in a way it is S P A M about S P A M. Anyway, I am sick and tired of the constant "Wow, I just found this terrific site" crap, and especially disgusted that it is coming from spoofed identities. I would bet that the Amateur Radio callsigns/email addresses/identities of the different people sending this crap are not actually the people they would seem to be, but rather innocent people. Anyway. I did a lookup of ab7sl.com and found it to be hosted via www.domaindiscover.com and their phone numbers are: toll-free at (877) 518-4965 ( International customers: call us at +1 (858) 560-9437 ) or email at support@... so everyone who wants to put a stop to this please call and complain. Tell them that ab7sl.com is sending S P A M. Do it tomorrow.

Hi PresW

At first I was upset with your email. I looked up the call signs and found that AB7SL lives in Presscot, AZ. Then I looked at the header info of the original email on 6-14 and discovered that it was sent from a dial up acount in Phoenix AZ and KB7BMB has a listed address in INDIANAPOLIS. I then checked the email on 6-16 and found that it was sent from a cable modem (Cable One) account in Phoenix. Then I said to self, Self why would a person that lives in Indianapolis be using internet accounts that are in Phoenix? and self said: huh? dont know.

Of course, what is really sad, is that the site has a lot of useful info and if Charles posted the emails then he should be using his own call sign. Of course, John could be sending these as he had only had his license for 14 days and may be exicted about the site.

Some people work so hard on their Web pages and are simply crushed when "millions" of people don't run to see what is new...its almost like an affliction. So they find all kinds of clever ways to try and drive traffic their way.

This guy is doing the same "Wow, what great Web site!" routine all over Yahoo and Usenet groups.

The pity is, I will never visit that Web site just because of this tactic. It may actually be the best thing since sliced bread and I will never know...

Amen!

I'm glad somebody else has noticed this too. This crap is even posted on the ham newsgroups almost every day. I had put the keyword AB7SL in my kill file filter long ago, but it dosn't do much good here. The worst part of this spam is that it doesn't offer anything of value that cannot be obtained directly from the manufacturer' sites. Most of the content is nothing but links to other sites. Maybe this guy is getting some type of advertising kickbacks based on the number of web page hits?

Gary, I hope I'm wrong, but I bet that you won't get a reply. Most of the guys on this reflector have calls and they use them. Those that don't generally have something to hide and chances are that they are operating illegally. If the guy wants to transmit on the MARS frequencies he needs a MARS call. He can listen without making any modification to his rig.

Like I said, I hope I'm wrong, but I'd bet that Shaun doesn't have a call, never did and never will. I'll apologize publicly to him if he comes up with a call that can be confirmed.

Fix the no tune on 40 meters problem. I followed the suggestion in the FT-100D manual and added about 6-8 feet of coas. Tunes fine on all bands now.

NOW to start having fun using it mobile.

# 14692. Re: [FT100] Solved 2m RX!

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-17 04:55:45 UTC
From: Neville Mattick
Topic: 14692  Message: 14692

Well having dissected my FT100 I'm a lot wiser!

The problem was traced to Q1005 an obsolete SGM2016AM GAasfet by Sony,
this is marked 'M' only.

Take a few high res' photos of the whole work area first for comparison.

Location is under side rear RH corner of the main unit.

It measured 106 ohms S~D, just a bit short ckt!

How does Yaesu service dept' go board level on these? I suspect the
approach could be to replace the whole board type repair, why? because
of the bonding agent that the sub mounted devices are held with, I
couldn't budge the fet.

Is there a release agent for this type of SMD?

My solution was to remove the legs of the device and scrape it down to
1mm high, clean the board and review it carefully each step along the way.

This device is not 'an off the shelf item' in Australia as far as I can
tell [AFAICT] and Sony has it as 'obsolete' so as it was a weekend and I
wanted to finish this [along with all the other mods due] so I
substituted a 3SK121 [non SMD].

Results are ok, NF wise it's similar [AFAICT].

Why it failed probably was adjacent to high power or direct tx into the
front end somewhere in the rig's recent past [UNKNOWN TO ME] history.

You replied that you had a UK call, Shaun. What is the call? I think you're not a ham at all, but a pirate with no call. Give us your call on the reflector, and if it's verifiable I'm willing to bet that you will get some help. So quit beating around the bush. The question is simple: What is your call? Why are you so ashamed to give it out? How long were you a CBer before you found out that you could infringe on the ham bands?

Topic: 14658  Message: 14697

And it's not a requirement to tell him how to do this also!

I simply asked him what his callsign was before I gave him any info. If he was a ham fine. He replied to me privately with his callsign. I wanted to know if he was a ham before I helped, which I did.

BTW, Shaun is in the UK and has a EU spec FT-100. He tried the mod several times and it did not work. I told him to switch the Destination code to USA and it worked.

We have enough problems with pirates in the US. I do think there are legitimate uses to open up the TX e.g. transverter use besides CAP and MARS (which I am a member)

A point. I've noticed the steadily increasing
"noise pollution" with each generation of
computer monitor. I went from a 15 inch,
to a 17 inch, and recently to a 21 inch. All
have been Trinitron monitors. Each time the
interference increases.

Folks. PLEASE. Read the question you are repsonding to.

The original poster asked, as have thousands in his wake, about spark-plug noise which is RADIATED into the mobile antenna ( no, NOT in the power lead ) and FOLLOWS YOU as you drive.

The poor fella, after hearing it should be isolated from his driveway, sent himself to the top of Mount Wilson to escape the RF ( how's that for irony? ) to check it out. Now we're discussing computer monitors in the neighborhood we drive in.

HEY! IT'S THE LOUSY FORD/GM/TOYOTA/ETC. HIGH-ENERGY SPARK PLUGS!

You can't escape it. You can't filter it. You can't ground better. It is a signal that follows you, destroying reception and masking signals, even if those signals are frequency-modulated. You can do nothing excpet complain, in droves, to the manufacturer. As a dealer/ham I know these things.

Go to your dealer's service department ( don't yell at him/her because that is not the venue ). Demand an audience with the factory field-engineer. Show him/her the noise extends above 30MHz ( your radio works in AM mode above there and my friend's noise extended to 550MHz!!! ), which is the their self-described zone of no-responsibility. Tell them that their vehicles are emitting an unacceptable RADIATION interfering with government-licensed emergency radio service. After a few thousand complaints you MAY get the attention of the factory.

Somebody please tell me why this tactic is being ignored.

Thanks

That's fine, Gary. I happen to think he may not be licensed. He responded to me (in private) that he was a ham and had a UK license. He never supplied a call. I wonder why? As I said, once he gives a call and if it is legitimate, I'm man enough to apologize to him ON THE REFLECTOR, for all to see.

If you saw fit to offer an explaination and help him, that's fine. Just don't jump all over me because I am suspicious of his intentions. MARS and CAP do a great job. Unfortunately I do not belong to either organization. But I have held a call since 1962 and I'm not ashamed to use it. Why should he be?

And it's not a requirement to tell him how to do this also!

I simply asked him what his callsign was before I gave him any info. If he was a ham fine. He replied to me privately with his callsign. I wanted to know if he was a ham before I helped, which I did.

BTW, Shaun is in the UK and has a EU spec FT-100. He tried the mod several times and it did not work. I told him to switch the Destination code to USA and it worked.

We have enough problems with pirates in the US. I do think there are legitimate uses to open up the TX e.g. transverter use besides CAP and MARS (which I am a member)

What about all the doubters making a public apology to Shaun?

As Shaun says, this is an "open" list with NO REQUIREMENT to list your callsign if you don't want to.

Good luck with your endeavours Shaun!

Cheers

Peter Forbes VK3QI

# 14701. Re: Can the FT-100's S-meter be improved?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-17 15:48:28 UTC
From: backhoefade
Topic: 14672  Message: 14701

To the best of my knowledge the answer is no. I calibrated mine at work for an S9 reading on 40 Meters using 50 microvolts rms for S9. You can see the resultant S meter inaccuracy in the Excel file I generated from the measured data in the 'Files / Measurements' section. It's pretty bad. The way I "re-calibrate" the S meter mentally is by remembering that above S5 the "S reading" is one S unit higher than actual, and also that S9+20dB is actually S9+15dB, S9+40 is S9+25 and S9+60 is S9+35.

There is only a single adjustment for the S meter which amounts to a DC offset. All you can do is shove the entire curve one way or the other. Most simple RSL indication circuits at least use a DC offset along with a DC gain setting. The latter allows you to set the steepness of the indicated RSL (receive signal level) function. The whole business is about proper interpretation of either a detector output or the AGC voltage. The FT-100D uses the AGC voltage to generate the indicated RSL. But they only included one control (DC offset) to you're really limited in terms of setting the accuracy of it. Look at the function in the file I posted. Ideally you want to have a nice log response so that the RSL function varies directly with the log of the receiver input power. This function just doesn't cut it.

I was a co-author of a patent for a unique means of generating a very accurate RSL function in a receiver. The patent number is 5706215 if you're interested.

My advice is to calibrate it on your favorite band for the standard 50 microvolts rms (single sinusoid) for S9 and perhaps characterize your "indicated RSL versus actual RSL" like I did so at least you know how to translate what the meter is indicating.

Shaun, as I said, I would apologize. I am sincerely sorry that I accused you of being a pirate, and I hope you will accept my apology.

I think there is one thing you need to keep in mind. Piracy on the ham bands is a rampant thing. There are many people out there who ignore the rules and regulations of this country and their own countries.

When someone comes onto a reflector like this one, looking for help, and signs the request with just a name, many folks get suspicious. Especially if someone is asking for help with a mod that may put the radio out of band. If you had initially said that you lived in the UK, and needed help with the TX/RX mod for frequencies you may have access to that we don't, and had signed your request with Shaun, M3AQN, none of this would have surfaced. Also, some replies are made to messages on the reflector and are not signed at all. So you don't have a clue as to who you are replying to, etc.

Again, I apologize publicly as I said I would, and I hope you will accept it. I think there were others who felt as I did as I received some messages supporting my initial request for your call. Crow tastes terrible. :)

From: backhoefade
Topic: 827  Message: 14703

I'll be quite frank with you on this. Based on what I went through with mine I would strongly suggest that you go to the store and physically inspect the unit internally to see if the spurious oscillation (so-called "SWR mod") has been implemented. There are pictures of the mod that Yaesu does at this website. You check for the mod by removing the bottom half of the case. But I'd be surprised if the store lets you do that. (What if you slip and scratch the case or mess up the screw heads?) I heard that the "SWR mod" was implemented starting around May 2001 but there's no guarantee. If it hasn't been done then I recommend that you send it in and get it done. Someone recently reported waiting 92 days to get his rig back which is unacceptable. I think the more typical turn-around time is about 6 weeks. Besides the "SWR mod" there is a second mod that should be done if you plan to operate VHF/UHF. Yaesu can do the mod or you can use the resistor approach that people describe here. Even the latest FT-100Ds need to have the VHF/UHF fan mod done to them. I don't want to discourage you from buying the FT-100D but you should be fully aware that there are two necessary mods required. The third mod is the microphone mod which a lot of people don't bother with but I highly recommend it. It vastly improves the otherwise somewhat muffled sounding stock transmit audio. Good luck.

I'm thinking about doing the same. That way I'll have at least one
more or less accurate indication. HI

> You can see the resultant S meter inaccuracy in the Excel file I
> generated from the measured data in the 'Files / Measurements'

That's an understatement.

That will take a bit of getting used to, but at least it's a system.
:-)

> There is only a single adjustment for the S meter which amounts to a

So it's not a scalar (i.e. gain)? That's good to know...

That might not be a bad idea.

TNX!

Ya know, when you really think about it, telling a pirate how to enable
out-of-band transmit would DECREASE the chance of ham band piracy.

Wouldn't it?

# 14711. Re: Can the FT-100's S-meter be improved?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-17 18:21:17 UTC
From: backhoefade
Topic: 14672  Message: 14711

I went back through my files and confirmed that when I previously set the S-meter "calibration" control in the sub menu to indicate S9 for a -76 dBm input level instead of -73 dBm (50 uV rms) the entire RSL indication function shifted by 3 dB. So indeed the control is just an offset rather than a gain change. A gain change would have changed to slope of the indicated RSL versus actual input RSL function. Looking at the file you can see that even if you had both the offset and the gain as adjustments you still wouldn't be able to line the indicated level up with actual. The function simply isn't logrithmic, so we're out of luck. I wonder how the Icom 706 compares in this regard. I have to say that it's disappointing to have a (what used to be anyway) $1000 rig with such a lousy S meter.
My TS-520 runs circles around the FT-100D. Nothing like a nice accurate S meter such as on the older tube and hybrid rigs (eg. Collins S line, older Kenwoods, etc.). You also suffer a loss of resolution of course when you go to the segmented, bar-graph style read-out.

# 14712. RFI Problem

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-17 18:30:55 UTC
From: Pres Waterman
Topic: 14623  Message: 14712

Thanks. I thought I had missed something when I got those other replies.

I'll talk to the Ford people. I don't suppose it'll do much good, but its all I have left.

No, you didn't miss anything. It's the effect I call, "If you can't answer a question, answer another question"... not to mention how threads wander.

And I apologize for being cranky. It's just that I am a ham, I am a dealer, I probably have a unique perspective on this ( until such time as a factory engineer comes on the list ) and I have been beating this particular drum for years and I am tired of it being a solo act.

It will take exactly one thing to make this work... a LOT of complaints. Not one, not even from a dealer. A groundswell of complaints to the factory. Otherwise they will continue to make vehicles that pollute electronically. It's a shame the FCC is not intereste, although I doubt they have jurisdiction. Although they have somehow declared themselves in charge of orbital debris, merely because the launch activities of devices they DO regulate, contributes to the trash out there. Maybe there is hope.

Thanks

Shaun
Being a fellow M3 (M3RJA just in case you want to get nosey Dick)I can understand exactly what you are saying....so many "technical" terms and not knowing where to start is a daunting process, the only shame about ham radio is the "old boy" syndrome where unless you have had a licence since the year dot you aren't good enough to talk to on the air, I know this from a conversation i over heard on the radio between 2 "old school" ham's who admitted that it isnt worth talking to an M3 on the air as... and I quote "what would they know". This i feel is a great shame as when they have gone silent what or who will be using the air waves?... dont take a diploma to work it out, without people like yourself who WANT to learn and use the air waves ham radio will be dead in the water. So take it all in your stride and just dont lower your self to their level keep using your radio and most of all ENJOY it. oh and Dick if you feel you can raise yourself to this level put your head back in line and if somebody asks for help perhaps there is a reason and perhaps its a request that an amateur with more years of using the equipment could help with.

Dickey boy. I don't think Shaun gives a rats a** what you think about whether he is a pirate or a Ham. You need to set back and take a good look at yourself and think about how you are acting on this matter. Go take the Extra exam and stop your bitching so yu can be an EXTRA LITE.

You replied that you had a UK call, Shaun. What is the call? I
think you're not a ham at all, but a pirate with no call. Give us
your call on the reflector, and if it's verifiable I'm willing to bet
that you will get some help. So quit beating around the bush. The
question is simple: What is your call? Why are you so ashamed to
give it out? How long were you a CBer before you found out that you
could infringe on the ham bands?

Do I have to get an English Callsign to be a pirate? I have my own eye patch and think a peg leg would be nice too... Harr matey..

Seriously though shouldn't we be encouraging everyone we can get to join the hobby, regardless of their occupation or whether or not they work aboard a maritime vessel? I mean pirate, bar wench, shopkeeper even wanna-be radio policeman should be welcome. And it seems to me that helping someone out shouldn't come with a price or a declaration of intent. Perhaps age has precipitated the loss of one of the key concepts of Amateur radio as listed in the amateur code:

FRIENDLY- Slow and patient operating when requested; Friendly advice and council to the beginner; kindly assistance, cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit!

I must have missed the part that added condescending, pompous, arrogant etc....

I am about ready to "trash" my old style (pins instead of screws) ATAS-100 for something more reliable. The purpose of this posting is to get some feedback from those of you with FT-100's that have gone with a different style/brand screwdriver antenna.

The Hi-Q Steath antennas seem to be a great antennas but are rather pricy. Any other recommendations?

Has anyone purchased the new ASAC Automatic Screwdriver Antenna Tuner (specifically for the FT-100) from AmCom Inc.? How does it work?

I am also toying with the idea of biting the bullet and installing an amp at the same time. Any recommendations on good mobile amps?

The best radio will only be useful as a boat anchor if connected to a lousy antenna. Since I don't fish, hopefully feedback from this posting will keep my FT-100 on the air and not in the water.

Thanks,
Craig - K5VMI

You'll love the Hi-Q, I know it's a bit pricey but it's a very, very well made antenna. I can cover 3.2-54Mhz without reconfiguring a thing.

Now that people have had a chance to make comment on the ham call issue let's leave this aside and ask the following question.

Why does the mod seem to be "destination code" dependant?

In a reply by ., Gary Mitchelson <n3jpu@c...> > he stated "several times and it did not work. I told him to switch the Destination code to USA and it worked."

We now know that it works for destination code US, and I know it works for AUS, but what about all the other codes in F57 and F58 such as JPN, FRAN, BEL, GER, and EU1,EU2,EU3and EU4????

NOWHERE ON THE USUAL MODIFICATION SITES SUCH AS:

mods.dk, k0lee/.....ftfreeband.htm and k0lee/.....ftmods.jpg

IS THERE ANY MENTION OF THERE BEING A DESTINATION CODE DEPENDANCE, ONLY THAT SOMETIMES, TO GET THE LAST DIGIT ON THE DISPLAY CORRECT, A MODE CHANGE MAY BE REQUIRED.

Perhaps there needs to be a check by someone willing to give up their current settings to see if this is indeed the case, that the modification does require a special range of destination codes. If this is the case, then a note be added to the modification pages.

Cheers

Peter Forbes VK3QI

I am using the Hustler antennas on my Vatara I use the Comet Rs-730 mount on tne back door of my SUV with the Hustler 22in mast. This puts the coils just above the top.
Match is good 1.2 to 1 at the freq. I use on 75 and 40 meters I also use a Valor 160 meter coil on the same mast with the same SWR. I still have to get my coils for 10 and 15. Yes you have to stop and change but that beats having all the tuning problems.

Hi

The M3 callsign range is given to those of us who have what is known as a Foundation Licence. This may have been attained through a Foundation Course or, as in my case, from having had a Class 'B' licence for VHF/UHF and completeing a Morse Assessment. We are limited to 10 Watts on all bands, but excluded from the 10m band. As I hold a Class 'B' licence as well I can operate full legal power except on the HF bands. I hope this answers your query and that we will have many contacts in the future with all types of licence holder.

Not really ,there are books and then of course the internet with all of this info floating around.It's not going to stop unless the radio mfgs stop making them expandable.But then if they did they wouldn't servive either.Think about it the ham community does'nt buy all of the radios.Then what about the flea markets out there?Ask yourself; Do I really ask for a call when somebody wants to buy my radio?,or is it cash and carry and now I've gotten rid of that head ache,plus some more money in the pocket to go and buy that new radio.

Here I go again ....
Take a look at the Hustler Mobile antenna. I have 4 bands
(20/17/15/12) on the mast (which also works on 6mtrs),
instant bandswitching, no tuning. Unless, of course, you just
have to have a DC to Daylight antenna.

(specifically for the FT-100) from AmCom Inc.? How does it work?

I am also toying with the idea of biting the bullet and installing an
amp at the same time. Any recommendations on good mobile amps?

The best radio will only be useful as a boat anchor if connected to a
lousy antenna. Since I don't fish, hopefully feedback from this
posting will keep my FT-100 on the air and not in the water.

Thanks,
Craig - K5VMI

# 14727. RE: [FT100] RF into speakers

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-18 10:43:15 UTC
From: Robert J. Curci
Topic: 14661  Message: 14727

Hey Gil,

I had the same problem in my 2001 Chevy S10. This happened on 40, 20, 17, 15, 10 and 6m. I have mine setup on a homebrew hump mount with a Motorola speaker mounted in the front.

I changed the speaker wire to RG58 and put a ferrite core in speaker housing. This took care of it completely.

Subject: Re: [FT100] RF into speakers

Hi Gil.
First make sure the rig is grounded at the chassis. Then make a choke at the feed of the antenna by coiling the coax in the trunk about 6 or 7 turns 4 inches in diameter. Next use ferrite on the speaker lead as close to the speaker as possible. All grounds should be as short as possible and that shoul ddo it.

# 14728. Re: I'm Tired of ATAS-100 Problems - Ready to Try Something Different

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-18 13:19:41 UTC
From: ki5mp
Topic: 14717  Message: 14728

Hi Craig, you're probably going to get about as many differing opinions on what is the best mobile antenna as you will replies, so I'll throw mine in, too. I'll put my trust old full-size Texas Bugcatcher up against any antenna out there. It's like the Eveready battery commercial - it just keeps going...and going...and going. I consistently get comments like "Are you sure you're a mobile...?" Of course, the 300+ watt amplifier behind the FT100D helps...

There are a lot of good antennas out there - you just have to weigh the convenience factor. People don't usually like the Bugcatcher because you have to change the coil taps if you move around the bands a lot. I don't do a lot of QSYing, so it's not a problem for me. And I don't think you'll get a better transmitted signal out of a mobile antenna than you will out of the Bugcatcher (and it hears well, too). Proponents of the screwdriver type of antenna talk about the fallacy of the "tap" system used by antennas like the Bugcatcher and how inefficient it is - but all I can say is the thing works and consistent results are hard to ignore...

Good luck,

Mike KI5MP

I have a 2000 Tahoe and I was wondering how people have mounted the ATAS. I don't want to do a roof mount simply because of the overall height of the combo. I was hoping someone had an idea of a bumper mount of sorts. I am sure there is SOMEONE out there with an ATAS, Tahoe and digital camera. Can anyone send me pics or ideas on how they did it? Thx.

# 14730. RFI Problem

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-18 18:12:07 UTC
From: Pres Waterman
Topic: 14623  Message: 14730

Do you suppose that better plug wires would have any effect on the problem?

If so I would LOVE to know about it. As a dealer, I am apt to change cars often enough that it's a pain to reinstall the radio, let alone change wires, which are probably different in various cars anyway! So I am recitent to try aftermarket wires.

I did come across a manufacturer of racing wires that claims to reduce RFI. Unfortunately I lost the link. Maybe a search for "racing ignition wires" or the like would be fruitful. They did skirt around the issue of price. They may be quite expensive.

However, the problem may not be only in the wires. Several years ago Ford went from "distributorless ignition module" ( a potted module with wires going to the plugs, electrically fired ) to a coil-on-plug design with 4, 6 or 8 ( or 10! ) little "California Kilowatt" "transmitters" ( the individual coils on the plugs ). Now I notice on my 2002 Mustang we are back to centralized coil. Anyway, the pop-pop-pop is still there, very loud and although the FT-100 NB is terrific it does not help on 10m FM.

Not to mention that the broadcast radio puts out wandering hash all over the HF spectrum! That's a new one on me.

I am seriously thinking of taking an old trade in like a 1991 LTD and making it a radio modile and forgetting about the radio in the flashy ride.

From: frankweiss@aol.com
Topic: 14623  Message: 14731

I remember years ago (mid 60s), when a home mechanic could still tune up a car w/o 6 trillion $ of equipment, spark plug wires were made of compressed carbon granules, not copper wire. I seem to remember that it was recommended that the spark plug wires be replaced every certain interval, which escapes me now, because the constant flexing of the wires over the miles would cause increasingly larger gaps between the granules. This caused two problems. First, the current had to jump from granule to granule generating microscopic sparks. Of course, every little spark decreased the intensity of the spark desired at the spark plugs. Second, and of relevance here, the microscopic sparks generated a LOT of RF noise. Does this add anything to the discussion?

Magnacore.

I have a set in my Subaru (they were $100). Better engine
performance, but not a lot of noticable improvement in noise.

# 14737. Re: RFI Problem (some pointers)

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-18 23:32:28 UTC
From: ft100guy
Topic: 14623  Message: 14737

These days there is alot of noise and it cant normally be attributed to just one thing. Firstly there is no racing wire that I know of that can claim to reduce RFI. Why? Its pretty simple.. Racing wires are designed to carry as much voltage and current to the plugs as possible and to do this well suppression is out of the question. Its a trade off for sure. Now you can buy good wires that will carry the maximum allowable amount of the above and still maintain good supression but they will not be as good as true racing wires.
Getting to your comment on the Ford independant coil layout, one would think that this would reduce RFI. Yes and no.. Now you have eliminated the wires (example the 5.4 Triton in the Expedition an 8 coil layout). This design is great for fuel economy and RFI supression but the problem is that the main goal of Ford engineers was not to reduce these RFI emissions in the first place but to make the vehicle more friendly to the environment. The noise that was once generated by the secondary portion of the ignition is now replaces by noisy primary 12v lines to each coil along with a noisy control unit. This may not necessarily occur on an Expedition but the introduction of computers into our cars most certainly complicates matters on some makes.
Anyway, diagnosing noise introduced into your HF rig requires some serious poking around as the noise may not be what you think. Its easy to be fooled into thinking that the ignition wires are the source but there may be more to it. To use the above example of noisy ignition wires, it could be many other things. Many cars are now using crank triggers, distributorless ignitions, fuel injection and various computers all which pulse at the same time that an engine must fire, so now you have several culprits instead of one. And RFI supression is not the paramount concern of any engineer that I know of.

Yes they make a valiant attempt to keep things to a minimum but as we know, some cars can drive you crazy when used as a mobile HF position. Its best to start with the car off and the radio on, turn on different things with the vehicle off and see if they generate noise, remeber to change modes and bands on the radio as you do each step. Then put the ignition in the on position but do not start the vehicle and retest all electronic devices and see if they generate noise making notes as you go along. Shut the rig (to protect it) and start the car and again retest all electronic devices with the vehicle running. Remember that electric fans come on and off when the car is warm or if the a/c or defroster is engaged so be sure to run the vehicle long enough to allow these devices to "avail themselves."

Many things make noise such as added load on the alternator, defroster, a/c compressor, computers, ignition systems, blower fans, radiator and a/c condensor fans, relays, fuel pumps.. Each car is different and may present RFI to the radio in different ways. Make sure the radio is well grounded and the antenna is located as far away from the offending items as possible. Remembet to run your rig directly from the battery. Determine how the interference is getting into the rig.. By the antenna or the dc line, maybe its radiated into the radio itself..

In a nutshell, try to determine whats actually going on, buying stuff and guessing is simply a waste of money. Many times the noise can be cured quite easily, other times its easier to replace the car :-) Regards..Richy N2ZD

# 14742. Country codes

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-19 04:41:58 UTC
From: Ian Foster
Topic: 14742  Message: 14742

AS mentioned in an earlier posting I made, There are some VERY different versions of the FT100D out there!

My experience with a unit destined for the JA market was that the unit would NOT open up or cover any extended bands from 6 metres and above despite double and triple checking of the mods that I had made.

The JA version shows many of the country specific options in both menu positions but does not list either AU or USA.

In an email I had from Vertex, they confirmed that the unit I had was fitted with a different interface CPU and that the only way I could get the radio to perform to suit VK conditions was to replace the JA dedicated (limited) CPU.
Yaesu / Vertex in JA sent me a replacement CPU which I fitted, checked all the alignment data from the service handbook and Lo and behold, the radio is now as it should be to suit VK and now all of the countries are also listed in the menu.

I might add that I have nothing but praise for my dealings with Yaesu / Vertex in Japan and also for the local agent who had not had the benefit of selling me the radio in the first place!!

My only complaint with the setup using the remote kit. ATAS100 etc is that the recovered audio in the speaker is not really loud enough to overcome reasonable roadnoise in the vehicle and I am currently looking at putting in a low level audio amplifier in the speaker enclosure to overcome the losses in the extender cable and the low recovery (efficiency) from the crummy little speaker that I am using. The speaker size was determined by what could be placed in the vehicle and remain XYL friendly.. ;-((

Ian Foster, VK3ST

Why does the mod seem to be "destination code" dependant?

In a reply by ., Gary Mitchelson <n3jpu@c...> > he stated "several
times and it did not work. I told him to switch the Destination code
to USA and it worked."

We now know that it works for destination code US, and I know it
works for AUS, but what about all the other codes in F57 and F58 such
as JPN, FRAN, BEL, GER, and EU1,EU2,EU3and EU4????

NOWHERE ON THE USUAL MODIFICATION SITES SUCH AS:

mods.dk, k0lee/.....ftfreeband.htm and k0lee/.....ftmods.jpg

IS THERE ANY MENTION OF THERE BEING A DESTINATION CODE DEPENDANCE,
ONLY THAT SOMETIMES, TO GET THE LAST DIGIT ON THE DISPLAY CORRECT, A
MODE CHANGE MAY BE REQUIRED.

Perhaps there needs to be a check by someone willing to give up their current settings to see if this is indeed the case, that the modification does require a special range of destination codes. If this is the case, then a note be added to the modification pages.

Thanks Ian for your reply to my post.

Clearly there DOES NEED to be a warning on the various modification sites to the effect that the mods may not work, depending on where the particular radio is sourced from.

In a similar vein, the microphone supplied with the FT100 and 100D varies from country to country, depending on the importer. Hence the MMICROPHONE mod does NOT apply to all countries, and is specific to only one version of the microphone the MH-36.

(NOT the MH-42 for example)

# 14744. FM receive problem

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-19 09:19:14 UTC
From: Richard Cooper
Topic: 14744  Message: 14744

Hi fellow FT100 users,

I purchased an FT100D just a couple of weeks ago, so obviously still well within warranty but I have a problem with FM receive that someone may know the cause of or at least experienced themselves.....

Sometimes when the radio is switched on, it is unable to receive on FM mode on any band. If you turn the squelch down, the white noise sounds rougher than usual and it is not possible to get a lot of volume. You can tune to a known signal & the s-meter will show a signal is there but you still hear this noise only. It's as if there is some local electrical interference. Disconnecting the antennas makes no difference to the noise. If I change mode, all other modes work fine. Eventually after about 5 minutes, FM receive will burst into life.
Wide FM seems to be almost the same as Narrow FM but when I tune to a very strong FM broadcast station, I do hear the signal but it is very weak sounding.

Any ideas folks?
It would be nice to have some info before I take it back to the store.

Many thanks,
73

Richard (G4WFR)

It could be any number of things, but most of all its not your concern. Bring it back so they can give you a new one. If you wait too long to bring it back they may opt to repair it causing down time for you. Its not a common problem here so have them furnish a new one and start happily hammin with it...Regards.. # 14746. Re: RFI Problem (some pointers)

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-19 11:25:41 UTC
From: ft100guy
Topic: 14623  Message: 14746

Thats a misnomer indeed. Its possible to eliminate some forms of RFI but not all. Sometimes the solutions are not practical, other times impossible. Its the luck of the draw when dealing with this stuff, If a cars computer is generating some racket, many would not attempt to contain it beyond reasonable means. It depends on what components the Manufacturer neglected to engineer or shield properly and how much they cost to replace if you mess it up. Warranty concerns come into play when dealing with modern day vehicular RFI.
Its especially difficult to cure any RFI which enters thru the antenna except at the source. I have a 98 Saturn, the computer generates a spur on 146.52 on all of my radios. Maybe it can be cured but I for one am not going to mess with a computer that costs $450-600 USC to replace.. Another example is the Ford Fuel pump fiasco, its not cheap to add the filter and some have had lackluster results. If the manufacturer refuses to make these items radio friendly, one would find it difficult to make an RF friendly "replacement" themselves or tame such an item. There also is the reverse scenario, when the radio damages components in the car. In that case, you pay the bill for the repairs so its better to never mention a 2-way radio to your dealer in the first place.
That article may make for great reading but taming this stuff is not for everyone. If you have dc line induced RFI, go directly to the Stereo shop and pick up the biggest line suppressor you can find. This will help with most dc line absorbed RFI if it enters thru that point. Changing coax lengths,shielding, grounding, suppression of offending items at the source, all of these may work but the degree of containing such an item may be difficult. In addition, some radios are difficult to tame when used mobile. Thats a story for another day.
Regards.. Richy N2ZD

From: Eric van de Weyer
Topic: 14742  Message: 14747

Don't worry, Ian.

I also have that complaint about the low audio output from the FT100D. I feel, however that it is quite easy to build a small amp fitted to the speaker to overcome that problem. I have seen some comments on this list in the past about the speaker output and some people have mentioned other speakers which may overcome this obviously with inbuilt amps.

I have not yet done this mod but will probably do so soon probably using an LM386 or similar.

I think we should remember how the modification information is gotten if you go to the Manufacturer. When I've called Yaesu, Icom and Kenwood about making out of Band Mods to my radios ALL have required me to prove I have a license or permit to operate (MARS or CAP info) and mail or FAX it to them before they would reveal the "trick." So, while I agree we should follow the Amateur's Code I don't think we are out of bounds by not wanting to participate in passing info on how to operate out of band. This is about Amateur Radio not MARS/CAP or "Pirate" Radio right? BTW I'm still not clear why an Amateur (UK or otherwise) needs to transmit out of band. I think the right policy is to avoid passing that sort of info on E-Groups at all and leave it to the manufacturers to dole out.

Hey Paul, what a great idea and while we are at it lets give instruction on putting up better antennas for non ham frequencies so they won't get bored with the results and try our bands.

<SHEEESH>

As a user of some non ham spectrum who has had to deal with inane blather of Pirates I say thanks a bunch for a great idea. How about we leave the checking of required doc for non-ham mods to the manufacturers instead and leave this forum to Ham use of the FT-100 and D?

Richard, I'd suggest you return the radio to the dealer you purchased it from and ask for a replacement. Their response to such a request might be determined on their return policy, but you may get positive results if you insist that this has been an on-going problem.

Good luck. Just don't wait too long or it may require a trip to the factory for repair.

73,

Dick

I'm sorry if my sarcastic remark was out-of-bounds. I figured the main use
for full-coverage transmit of ham rigs was to add to the morass just below
ten meters, which I figured was preferable to pirates IN the ham bands.
Obviously, pirates on some band have caused you great harm and I apoligize
for my remark, meant in jest.

# 14753. FT-100(D) is not CAP compliant

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-19 16:18:50 UTC
From: backhoefade
Topic: 14748  Message: 14753

The FT-100 and FT-100D are not CAP certified for either HF or VHF use. Take a look at http://www.ntc.cap.gov/comm/index.cfm and you'll see what I mean. So mod or no mod, it's still not compliant. So I'm a bit surprised though not completely surprised by the fact that the guys at Yaesu didn't mention that.

Aside from that, I want to mention that there is a definite advantage to having the ability to operate on the marine frequencies (eg. 156.XXX MHz) in times of emergency. If my fishing boat was taking on water with the engine frozen and drifting towards the rocks and heavy surf would I transmit on a marine channel with my FT-100D ? You betcha!!

.

File : /Mobile Installations/99 tahoe mount.zip
Uploaded by : w9wy <guido@...>
Description : FT100D and ATAS in a 1999 Tahoe

You can access this file at the URL

It would be strongly preferable that pictures of mobile installations be
placed in the PHOTOS section, which is 30MB and dedicated to photos, with
thumbnails, etc, rather than the 20MB FILES area.

Thanks

It would also be available on the 2000 ARRL Periodicals CD set which
includes QEX and NCJ as well.

Sounds great, but I would bet it, like just about everything I have read in
vain, says things like "go directly to the battery" and "bond things like
hood ( bonnet ) and tailpipe" and I doubt it really addresses the various
evil radiating things that Richy so astutely pointed out.

Date: 2002-06-19 17:04:53 UTC
From: Pres Waterman
Topic: 14742  Message: 14757

In an email I had from Vertex, they confirmed that the unit I had was fitted with a different interface CPU and that the only way I could get the radio to perform to suit VK conditions was to replace the JA dedicated (limited) CPU.
Yaesu / Vertex in JA sent me a replacement CPU which I fitted, checked all the alignment data from the service handbook and Lo and behold, the radio is now as it should be to suit VK and now all of the countries are also listed in the menu.

When you changed the CPU, was it a million-pin flatpack, and if so, how tricky was the soldering? Is it something a hobbyist has a shot at?

Thanks

# 14759. FT-100(D) is not CAP compliant

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-19 17:09:33 UTC
From: Pres Waterman
Topic: 14748  Message: 14759

Aside from that, I want to mention that there is a definite advantage
to having the ability to operate on the marine frequencies
(eg. 156.XXX MHz) in times of emergency. If my fishing boat was
taking on water with the engine frozen and drifting towards the rocks
and heavy surf would I transmit on a marine channel with my FT-100D ?

When "normal means of communications are not available"... did your marine
radio fall overboard on your fishing boat?

Thanks

Been there - done that; 144 pin ASICs etc. You must use a super
fine tip iron and a microscope. There's no other approach or you
will butcher the heck out of it. Removal requires the use of a
special iron with a tip that blows compressed air. That, along with
an initial pass with solder wick, will get the thing out. But it's
not an easy task even with the best tools.

# 14761. What they do.

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-19 15:03:43 UTC
From: J Craswell
Topic: 14761  Message: 14761

Hi Paul: Thanks for the letter.

Just to give you an idea of the sorts of problems I've had I participate in CAP. One example We were on a Search and Rescue Mission and the only communication we had was over a VHF repeater outside of the ham bands. When talking to the Mission Coordinator who was relaying info from the Air Force Rescue Coordination Center we had to overcome Wolf howling sounds and Heavy Metal Music being played. Now in this case it was only a False Alarm (An Airplane safe in the hanger with a faulty Emergency Locator Transmitter) but MAN that pissed me off. This has happened more than once and it's not cool.

The ARMY MARS freqs above the 75 meter phone band I've had my share of Jammers and Pirates chatting up a storm. Some are probably "spy" numbers stations but by the topics I believe at least a few are pirates / lids fooling around.

Locally one "genius" tuned into Police and Ambulance freqs and tried misdirecting them. He even "ordered" the PD to "shoot the suspect" which fortunately they were wise to. The worst part is that this jack ass was a licensed Ham. He had no reason to own an out of band radio. i.e. not CAP or MARS license. He apparently started out small with jamming the MacDonalds Drive up windows with fake orders but then moved up this this insanity. I think we need to think twice on making it too easy to cause this sort of mischief. Sure many technical people who are "lids" can figure this out but at least lets not help the non technical lids and mental patients.

Imagine a hypothetical situation where a Ham is out fishing in a simple skiff (not loaded with marine electronics) and all he has on hand is his trusty Handie-Talkie for example.

But you're right - in general, ham gear is for hamming and marine gear is for boating.

Try the High Sierra and you'll love it. Don't have to leave the vehicle to QSY and it covers 10m - 80m. It requires a real mount too so you'll have to get under to the frame and secure it well. When installed properly it plays like a masterpiece.

Here I go again ....
Take a look at the Hustler Mobile antenna. I have 4 bands
(20/17/15/12) on the mast (which also works on 6mtrs),
instant bandswitching, no tuning. Unless, of course, you just
have to have a DC to Daylight antenna.

Subject: [FT100] I'm Tired of ATAS-100 Problems - Ready to Try Something Different

I am about ready to "trash" my old style (pins instead of screws)
ATAS-100 for something more reliable. The purpose of this posting is
to get some feedback from those of you with FT-100's that have gone
with a different style/brand screwdriver antenna.

The Hi-Q Steath antennas seem to be a great antennas but are rather
pricy. Any other recommendations?

Has anyone purchased the new ASAC Automatic Screwdriver Antenna Tuner
(specifically for the FT-100) from AmCom Inc.? How does it work?

I am also toying with the idea of biting the bullet and installing an
amp at the same time. Any recommendations on good mobile amps?

The best radio will only be useful as a boat anchor if connected to a
lousy antenna. Since I don't fish, hopefully feedback from this

posting will keep my FT-100 on the air and not in the water.

Thanks,
Craig - K5VMI

I am still live by the Boy scout moto " Be Prepared" ..... Just because my auto will drive over 100 mph dosent mean I would do it.. But If it was the only means to rush a loved one to the hospital I would. The same thing with my radios. Just because it could tx out of a ham band dosent mean I would do it with out an extreme situation.

Heck, Here we've got a better than thou ham in the area that uses the marine band to keep in contact with his wife on a daily basis.(no boat in volved).He's an Advance class operator,(what in the hell does that mean?)My interpretation is:this must allow you to do as you see fit on any band you want to play on.In a past posting that I had made; I had stated that I've had reported this guy in ,and the F.C.C. has done nothing on this matter.But'yet this guy had the nerve to chew me out for having FRS,and Cb radios in my stations (both mobile and base).When questioned on this matter at one time,his response was that they don't use the freq.'s around this area let alone around the Missouri River.In which I know differantly.

# 14769. Occasionally 'splattering' squelch on V/U FM RX

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-19 19:36:04 UTC
From: Frank van Wensveen
Topic: 14769  Message: 14769

When not using my FT-100, I usually have it tuned to 145.6125MHz (my local repeater frequency) or 466.710 MHz (the local police dispatch frequency).
Now and then I notice the squelch beginning to 'splatter'. To clarify, what happens is this:

- The S-meter indicates brief peaks from S1 to S9++
(like there's a lot of static or irregular spark-induced QRM)
- The green 'busy' LED goes on and off
- Lots of 'static-like' crackling sounds come from the speaker

This all *looks* like there's just a lot of QRM'ish noise on the frequency, but when I turn the squech threshold knob counterclockwise to open up the squelch, the whole phenomenon disappears. If there really was static or QRM being received, this should not happen.
Also, if I turn the squelch threshold knob fully clockwise, the speaker remains muted but the 'busy' LED and the S-meter still indicate irregular, intermittent and brief signal peaks.

Ideas or suggestions, anyone? Have other FT100 owners noticed the same? (BTW, I have the thermal and VSWR mods on my rig.)

73,

Frank PA3GMP

Boy, it must be a job to be perfect. You just tell everybody off don't you Jimmy Boy. And I guess we're all supposed to be impressed with your 22' rowboat with 2 trolling engines on the back. The one thing you mentioned was that you had a cb radio on board your "ship". Now we all know why you're such a jerk. Go back to Channel 11 and be a smart ass there Jimmy Boy.

It's hard being humble when you're perfect I guess. I think we're all kind of sick of you and your jackass ramblings. Go take another Prozac and calm down Jimmy Boy.

Subject: [FT100] FT-100(D) is not CAP compliant

Aside from that, I want to mention that there is a definite advantage
to having the ability to operate on the marine frequencies
(eg. 156.XXX MHz) in times of emergency. If my fishing boat was
taking on water with the engine frozen and drifting towards the rocks
and heavy surf would I transmit on a marine channel with my FT-100D ?

When "normal means of communications are not available"... did your marine radio fall overboard on your fishing boat?

Thanks

Maybe we should all stay away from E-mail. :-)
I've been in E-mail forums for some 20 years now (starting with
FIDOnet) and there have been fights and flame wars for as long as I
can remember (and certainly much longer). There's something about
E-mail that does something to people, I don't know what... I'm sure
this whole sorry mudfight wouldn't have happened if it had been
conducted in CW! :-)

From: vk2new
Topic: 14769  Message: 14776

Hi group, I hope all is well.
Frank the way I listen on any commercial channel noise free is I activate CTCSS decode and listen in tone quiet. All I hear is the signal or station which transmits the same code as my radio is selected for. If you do not know the code of a certain station or company/fleet, just activate the CTCSS decode so the channel is quiet, then hold the func-key in for a second, then select menu #12 and turn the VFO knob slowly until you hear audio as long as they are transmitting CTCSS and not DCS. If they are using DCS then just use the same sequence (menu #7) as I have explained for CTCSS. End result is a fully manual tone decoder and it works fantastic with no intermod or crad that wide band receivers are known for.
Goodluck and have fun with your FT-100 like I have been for almost 10 months.

# 14777. CPU transpolant

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-20 01:03:07 UTC
From: Ian Foster
Topic: 14777  Message: 14777

Hello Pres,

>When you changed the CPU, was it a million-pin flatpack, and if so, how
>tricky was the soldering? Is it something a hobbyist has a shot at?

>Thanks

>Pres Waterman W2PW
>c/o Patchogue Motors, Inc.
>Long Island Ford and Kia dealer

In a personal email to another member of this group I responded as per the quote to more or less the same question and is as follows:-

Yes it is a delicate task to do the transplant.

It appears at least in my case that they did not use any locating glue to hold the CPU prior to soldering so the removal was relatively easy using a hot air gun from my SMC work station.
After the chip was removed, I just ran the iron close on the tracks to clean up any solder paste splashes and double checked for track shorts by running a sharp point between all of the pads.

I found the most difficult part was the soldering of the replacement unit onto the board. This was in part due to care needed not to create any bridges on the pins of the CPU.
I only soldered a few leads on and then decided to remove the CPU again and then place a very fine solder wipe on each pad in the absence of having low temperature solder paste in the workshop.
I then tacked the four corners (three pins each way) to the board and then used a conventional low temp iron to wipe down and away on each of the pins. This allowed the existing tinning of the new CPU to sweat itself to the small amount of residual solder that I had left on the PCB.

The whole operation took about 50 minutes and was certainly an exercise in patience.

Before I started, I wrecked an old mobile phone and did a few practice runs on similar SMC's in it as it did not matter how many I destroyed in the process.

I can tell you that I was more than relieved when the radio burst into life after the operation!!!!!

At least I had my bases covered as Yaesu / Vertex also sell that whole board as a spare part and if I had stuffed up the operation I could have purchased that front board assembly for around $US100.

For the sake of $US20, I was going to give the job a try and see how it went. At 55yrs old, the hands and eyes are not what they once used to be and I normally try to avoid working on SMC like the plague but this was a worth while challenge that I am glad I tackled.

As an extra comment though, a mention of "solder wick" was made in another posting.
This would be a most dangerous approach as solder wick does have a tendency to "magnify" the heat and whilst it works reasonably well in many applications, its use in assisting to remove SMC / SMD's other than resistors, capacitors and perhaps diodes should be avoided. The heat factor through solder wick can be enough to destroy the micro fine tracks on the PCB and if that happens, there can be major problems....

Date: 2002-06-20 02:31:00 UTC
From: Dick Thompson
Topic: 14748  Message: 14778

Jim, I think it's time we wipe the slate clean and start anew. I apologize for comments I've made and I really don't want to get into a pissing battle of words, because nobody really wins.

I questioned on gentleman about his call or lack thereof and I felt justified in doing so. Not as a reflector "cop" but as a ham who has been licensed for 40 years and tired of people who have a call, ask for mods that aren't normal, and refuse to give there call. I got support from some and my tail reamed by others. I did apologize publicly on the reflector and privately to Shaun. Either he hasn't been back on or he doesn't care to acknowledge my apology. I can't do anymore than what I did.

So, if you are in agreement, let's start all over and be friends instead of slinging mud at each other.

I'm sure I've said things that ticked off some folks and I'm sure you have also. There are some folks you couldn't keep happy if you hung them with a new rope.

So, I apologize and hope you will accept it. If I have anything to say to you I'll do it to your address on qrz.com and you may do so at my address on qrz.com.

In addition to apologizing to you, I also apologize to all the other members of this great reflector. I think we all mean well, but screw up in the way we do things. Life is too short and ham radio is a hobby where you make friends. We all need as many friends as we can accumulate. I know I do.

# 14782. FT-100 Out of Band Mods etc.

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-20 02:45:52 UTC
From: ve7baq
Topic: 14782  Message: 14782

It is with a great smile on my face that I read the various posts recently about requests for making mods to the FT- 100 (or any other rig) so as to be able to transmit out of the Ham Bands, and some of the responses. If some will remember, when I asked the question a few months ago, "Why do you want to transmit out of the Ham Bands?" I received many replies, some quite terse. Blunt would be one description! One person said they were traveling to another country and wanted to use the ham frequencies for that country which were not usable here, which was OK. Another wanted to operate CAP, which I thought was OK, another wanted to operate MARS, which I also thought was OK. I then explained that we on the northwest coast of British Columbia have had quite a few fish boat operators using ham bands for a multitude of reasons without bothering to get a ham license and it has been a real nuisance to some hams and that was my reason for the post. HOWEVER, later in the posts I have been reading that the FT-100 is not compliant for either MARS or CAP use. So that only leaves operation in an area that has ham bands that are not originally included with the factory settings. Lately Shaun in the UK has been given a rather rough going over by some because he didn't give his ham call with his request for mods. Lets think before lambasting someone unfairly. I don't think any ham should knowingly transmit out of band, but as one post recently said in a REAL emergency, do what is necessary. My FT-100 will work on the Alaska emergency frequency of 5167.5 Khz but the book says it will not be full power. I don't do it but the freq is there if needed. This makes me think that the transmitter output circuits are probably optimized for the ham bands, they are probably band pass circuits. I would be very careful when making mods that are too far from the original frequencies. You can't "tweak" the finals like you could on the old tube rigs, and these finals are much more expensive. To be quite frank, I rather like the original factory settings that keep me from accidentally going out of band.
Einar VE7BAQ

SCRUNCH
Scrunch
scrunch

What is that noise?
It's the sound of Ham
allocations shrinking.

Seriously though, this
kind of stuff is why ham
radio is in the currant state
it is, with all the bickering
and name calling. Don't
worry about what others
do, or don't do...
Spend that time operating,
and getting youngsters
involved.

# 14784. Freeband mod undo ???

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-20 04:41:54 UTC
From: Dave Adams
Topic: 14784  Message: 14784

Here's a new twist on the freeband mod issue....

I would like to know how to undo the Freeband TX mod on my FT-100D. I bought it used, and I don't really want the chance possibility of someone (or possibly me) transmitting outside of the ham bands. I hold a technician level licence and use the radio only for FM repeaters right now. (and listening on HF) I bought the rig because it fit perfectly remote-mounted in my Toyota Tundra and I didn't want to have to re-do the installation when I move up in licence class.

I find it all too easy to twist the wrong dial while driving or pull up the wrong menu and end up doing something unexpected. So, is there a way I can undo the mod??

BTW, My FT-100D is remote-mounted with the head mounted above the rear-view mirror (in the area where the sunglasss holder/ garage-door opener was) and the RF deck mounted under the passenger seat. I've got some digital pics of the mounting of the FT100 head and of the ATAS-100 mounted on the bed rail. If anyone's interested I'll post 'em.

Also, I've all but given up on my radiated RFI problem. I've grounded, filtered and tweaked myself blue and the noise continues. Good thing it's mainly only on 40 meters and the NB works pretty darn well on it.

Dear Member,

Radio Modifications is a group dedicated to the repair maintenance and modification of radio related equipment. I found this group, which is extremely helpful for ham radio operators who need information about their equipment. Whether you are a novice or experienced, this group will benefit all aspects of ham radio.

If you would like to join, please email the following RadioModifications-subscribe@yahoogroups.com or go to the website http://groups.yahoo.com/group/RadioModifications

Have you tried resetting the rig to the factory default settings?

- Turn the FT-100 off
- Press and hold the HOME and FUNC keys
- While holding these keys down, switch on the FT-100
- Release HOME and FUNC keys
Repeat the procedure, this time with the DSP and LOCK keys.

I don't know if that undoes the out-of-band mod (the software part at least) but it would be the first thing I'd try.

The fact that hams in different countries are subject to different regulations also complicates the matter. For me, tweaking my FT-100 to Xmit out of band means that I risk my licence. Big time.

> One person said they were traveling to another country
> and wanted to use the ham frequencies for that country which were not
> usable here, which was OK.
Not always. For me (with a Dutch licence) it would be illegal to mod my rig to Xmit on, say, 220MHz in the US.

> So that only leaves
> operation in an area that has ham bands that are not originally
> included with the factory settings.
Indeed. Lately there's some talk around here about extending the 40m band up to 7300kHz. If that goes through, a frequency mod would be indicated.

> My FT-100 will work on the Alaska emergency
> frequency of 5167.5 Khz but the book says it will not be full power.
> I don't do it but the freq is there if needed. This makes me think
> that the transmitter output circuits are probably optimized for the

True. They are. That's why RX specs may degrade on other bands.

> I would be very
> careful when making mods that are too far from the original

Either it works or it breaks, No other way to find out. :-)

> To be quite
> frank, I rather like the original factory settings that keep me from

Me too. But apparently that's a matter of personal taste. :-)

I am wondering how many Hams modded the FT100 to use it on channel 19 when traveling.. Hmmm Dont everyone answer at once. :-)

Maybe I will propose an FT100 poll on that topic..

Anyway, lets all forget it ever happened. The guys who spoke out do so in the best interests of Amateur radio. Protecting what we have is of paramount importance and its a touchy topic with most hams.

Anyway, I need to know how to restore the "roger beep" and also what diode I need to clip to get the cell phones on an FT100... :-)
Regards.. Richy N2ZD

# 14789. Re: FT100 Country Codes and low Audio

From: Gordon & Kate
Topic: 14789  Message: 14789

My FT-100 has a country code of US and I can Tx from 3.5 to 4MHZ which is not legal in OZ. I haven't fiddled with it and everything else about the radio is fine. Although the 2m and 70cm auto repeater shifts are a bit odd in some sections of the band I am not sure if changing the country to OZ wil help this. Someone mentioned about a year ago, that changing the country code can severely stuff the radio, so I have left well alone.

Any ideas on that.

In regards to low audio when mobile I use a small Uniden extension speaker from Tricky Dickie's that is mounted in my Discovery on the grab handle for the backseat passenger behind the driver. This puts it right behind my ear so I can listen comfortably without upsetting other passengers (except when I talk).

Thanks also to everyones reply re the sloppy ext speaker socket, I am waiting on an answer from the local agent, I want it sorted under warranty .

Hi Frank,

Why don't you try just disconnecting the antenna first, next time and see if that affects it. this will indicate if it is coming in via the antenna or is being generated in the xcvr itself.

Subject: [FT100] Occasionally 'splattering' squelch on V/U FM RX

When not using my FT-100, I usually have it tuned to 145.6125MHz (my local repeater frequency) or 466.710 MHz (the local police dispatch frequency).
Now and then I notice the squelch beginning to 'splatter'. To clarify, what happens is this:

- The S-meter indicates brief peaks from S1 to S9++
(like there's a lot of static or irregular spark-induced QRM)
- The green 'busy' LED goes on and off
- Lots of 'static-like' crackling sounds come from the speaker

This all *looks* like there's just a lot of QRM'ish noise on the frequency, but when I turn the squech threshold knob counterclockwise to open up the squelch, the whole phenomenon disappears. If there really was static or QRM being received, this should not happen.
Also, if I turn the squelch threshold knob fully clockwise, the speaker remains muted but the 'busy' LED and the S-meter still indicate irregular, intermittent and brief signal peaks.

Ideas or suggestions, anyone? Have other FT100 owners noticed the same? (BTW, I have the thermal and VSWR mods on my rig.)

Hi Ian,

congratulations on tackling the job of the surface mount brain. It is great to see that there are still some Amateurs out there who are prepared to have a go at it.

I have done a bit of surface mount transplanting over the years and also some repairs to notebook screens. I am pushing 50 and have stayed ahead of the game by having glasses which are made specifically for close up work plus a maggy lamp.

It really is a thrill when you spend that time on something on the off chance that you will have a working unit at the end of it all and it works when you switch it on.

Welcome to the club of those of us who have tried and succeeded.

Subject: [FT100] CPU transpolant

Hello Pres,

>When you changed the CPU, was it a million-pin flatpack, and if so, how
>tricky was the soldering? Is it something a hobbyist has a shot at?

>Thanks

>Pres Waterman W2PW
>c/o Patchogue Motors, Inc.
>Long Island Ford and Kia dealer

In a personal email to another member of this group I responded as per the quote to more or less the same question and is as follows:-

Yes it is a delicate task to do the transplant.

It appears at least in my case that they did not use any locating glue to hold the CPU prior to soldering so the removal was relatively easy using a hot air gun from my SMC work station.
After the chip was removed, I just ran the iron close on the tracks to clean up any solder paste splashes and double checked for track shorts by running a sharp point between all of the pads.

I found the most difficult part was the soldering of the replacement unit onto the board. This was in part due to care needed not to create any bridges on the pins of the CPU.
I only soldered a few leads on and then decided to remove the CPU again and then place a very fine solder wipe on each pad in the absence of having low temperature solder paste in the workshop.
I then tacked the four corners (three pins each way) to the board and then used a conventional low temp iron to wipe down and away on each of the pins. This allowed the existing tinning of the new CPU to sweat itself to the small amount of residual solder that I had left on the PCB.

The whole operation took about 50 minutes and was certainly an exercise in patience.

Before I started, I wrecked an old mobile phone and did a few practice runs on similar SMC's in it as it did not matter how many I destroyed in the process.

I can tell you that I was more than relieved when the radio burst into life after the operation!!!!!

At least I had my bases covered as Yaesu / Vertex also sell that whole board as a spare part and if I had stuffed up the operation I could have purchased that front board assembly for around $US100.

For the sake of $US20, I was going to give the job a try and see how it went. At 55yrs old, the hands and eyes are not what they once used to be and I normally try to avoid working on SMC like the plague but this was a worth while challenge that I am glad I tackled.

As an extra comment though, a mention of "solder wick" was made in another posting.
This would be a most dangerous approach as solder wick does have a tendency to "magnify" the heat and whilst it works reasonably well in many applications, its use in assisting to remove SMC / SMD's other than resistors, capacitors and perhaps diodes should be avoided. The heat factor through solder wick can be enough to destroy the micro fine tracks on the PCB and if that happens, there can be major problems....

Hi Gordon,

my FT100D came from Tricky's set to USA as well and had the same problems you mention with the repeater offsets etc.

I eventually decided to change it to the AUS setting and had no problem at all except, of course, the need to re-enter the memories. I took the opportunity to sit down and re-organise all my memories into a more logical (to me) order and I am very happy that I did bite the bullet and do the change.

Just follow the instructions and you should have no problems.

I think keeping the trash-talk on the Internet (and off the air) is exactly what the FCC folks have said we should do. i.e. Don't have this sort of conversation on the air. That is primarily what makes us look bad. Check the tapes of the WA6NUT repeater for example and tell me this is helping our image. FCC chiefs have said on more than one occasion "Take it to the internet" where no one seems to care. However I've always thought we ought to conduct ourselves as ladies and gents here as well. But I do agree. There is something about the internet that turns civil people into jackasses. Myself included once or twice. I've often told people that one factor about Amateur Radio keeps things a little more civilized. If a CB operator calls me a name who is he? I don't have a clue who the Rubber Duck (Or whatever) is. In ham radio if W1ABC calls my XYL fat pig I can at least look him up in the call book drive / Fly out to his house and punch him in the face. The Internet (like CB Radio) is a great cover. joeschmo@... etc is not easily looked up. The other factor (my opinion) is in person conversation you have a lot of signs to tell you if the person is really trying to insult or anger you. Voice inflections, facial etc. Even on the radio the voice can give you signs if the person is kidding or maybe just not fluent with typing the English language. Emails tend to snow ball I think. People take offense and then take the offensive. It snowballs and everyone is acting like a 5th grader picking fights. Not very mature.

I dunno, that's my two cents worth.

73 de Jay Craswell W0VNE

The great "Internet." The only thing that makes CB radio look normal.

I noted a message saying the FT-100 is not Legit for MARS use. This is incorrect! Army MARS is not required to follow NTIA regs nor (According to my chief) will need to do so in the near future. Army MARS stations working on Shares or FEMA channels do need to be NTIA approved but that is a different story. Now perhaps the USAF and Navy Marine Corp boys have a different program going that I don't know about?

The FT-100 is NOT approved for CAP use at this time.
The CAP NTIA approved list currently does not include the FT-100 or FT-100D for HF use since it's OSC stability is (I believe) 1 PPM and the current regs are .677 (or is it .667?) in any event "IF" you had a higher spec osc unit (As they provide for the FT-817) it would be "ok" for HF use. Since there is not 3rd party unit at this time that meets this spec it's no soap. The VHF side of the radio does not meet Recv specs. i.e. it is not "solid" enough from interference from nearby stations to be NTIA approved for (so called) wideband mode. It flunks Narrow (I would say Narrower Band) mode also.

Too bad - because it is a hell of a rig!

Topic: 14796  Message: 14797

I had made the comment earlier about it not being compliant for CAP. I wasn't aware of its compliance status regarding MARS op. After toying with my FT-100D for over a year with all sorts of base and mobile antenna setups, and after having the spurious oscillation mod done and still sometimes seeing the "SWR gremlin" under certain conditions, I would vote a two thumbs down at this point if I were asked whether I would trust the FT-100D in defense or potential life support/emergency service applications. I would probably go with the 706 for that if I had to choose a rig for example to take on an around the world sailing adventure. If I could only take one rig it would probably be the 706, but if I could take two then the second would definitely be my FT-100D since I much prefer its receiver. I just lost a bit of the faith a while back when I saw the transmitter start doing its SWR icon thing even with the mod implemented by Cerritos. So as far as reliability and "load tolerance" the transmitter gets about a C grade. The transmitter gets an A grade in terms of performance whenever the spurious osc is not present (especially with the mic mod by Richy N2ZD) and the receiver gets an exemplary strong A+. But the reliability of the transmitter in terms of that spurious oscillation lurking in the background keeps the TX reliability grade at a C.

I appreciate your suggestion, Anthony, but I'm afraid that doesn't address the real problem. It's not QRM or other noise on the channel (which CTCSS takes care of very nicely, I agree with you) but instead it seems to originate in my FT100. Opening up the squelch fixes it (but of course then I have to listen to the white noise of an empty channel).

I did, Eric. Even with a shielded 50 ohm dummy load the splutter
continues. So it has to originate in the FT100.

So far I seem to be the only one with this problem, i.e. it's not a
known 'feature' (like the VSWR problem) that Yaesu forgot to
field-test.

Great photos. I've never seen those shields before either. Looks like the original Yaesu mod with just the screwed-in straps turned out to not quite fix the problem. That's been my experience; even with the straps in there, it acts a bit flakey at times. Yaesu wouldn't have gone further such as adding these shields unless they deemed it necessary since any rework like this adds cost. I will try adding some shielding like that. Thanks for the excellent pics.

# 14803. FT100 vs IC706

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-20 18:21:57 UTC
From: k0rfh
Topic: 14803  Message: 14803

I am agonizing over these 2 rigs. I want to buy one soon but can't come to a decision that I feel comfortable with. I have been a devout Kenwood fan over the years, but for some reason they lack common sense when it comes to these HF mobile class of rigs. I was wondering if anyone can tell me why they went the route they did on purchasing the FT100 and why they perceive the 100 to be a better rig than the 706.

I appreciate the info. Please feel free to post offline to k0rfh@...

Thanks

From: backhoefade
Topic: 14803  Message: 14804

Here it is in a nutshell (well, actually in a neat compact cabinet). The FT-100D has the superior receiver in terms of front end overload, strong adjacent channel signal rejection, superior noise blanker performance, the ability to receive above 460 MHz and the inclusion of variable bandwidth DSP filtering in both CW (down to 60 Hz) and SSB operation. The downside to the rig is that it requires two modifications in order to kill an internal spurious oscillation and in order to allow the fans to function properly during VHF/UHF operation. A third minor mod to the microphone yields excellent transmit audio; without that mod many people report somewhat muffled sounding audio. So you really need to have the "spurious" (or often called "SWR" mod) and the fan mods done. It's best to have them done by the Yaesu service center but you may be giving up the rig for a few weeks. Recently someone reported a 22 day turn-around including shipping. You have to open the top cover to see if the mod has been implemented for the spruious issue. To this day I have never heard of anyone buying a new FT-100D with the fan mod already implemented. We rarely hear about a spurious transmitter problem with the 706 but I have read a few reports of that specifically at the 706 website so it can happen. But for practical comparison you shouldn't expect that problem with the 706. A couple features that the 706 boasts over the 100D is alphanumeric labels for stored freq's and the ability to program frequencies via an external PC. The FT-100D lacks both of these. They're only important if such features really appeal to you.
So that's the dilemma; you have to do the mods if you want the rig with the superior receiver. If you're a "receiver nut", also if you operate CW a lot, I strongly advise going the FT-100D route. It is an excellent receiver and the variable bandwidth DSP filtering is great for crowded CW conditions (and also for crowded SSB). The 706 doesn't have variable bandwidth DSP which to me is missing the whole point when it comes to DSP filtering. The 706 does have a superior DSP notch filter but the one in the FT-100D generally will get the job done.

Well, you need a lot of ground contact surface. I'd done the mod earlier but omitted the screw, trusting to a piece of rubber I'd stuck on top of the ground strip to press the strip against the center rib of the chassis once the top cover was in place. That didn't work. I went back to it and placed the screw so that the strip touched the center rib over as large a surface as possible, and so far it seems to have don the trick (knock on wood).

> Yaesu wouldn't have gone further such as adding these shields unless
> they deemed it necessary since any rework like this adds cost.
Exactly. Could anyone tell me exactly which parts of the circuitry have been shielded with this new construction?

Regards,
Frank

> firewall on a Blazer? Any existing cable pass-through? Any
> suggestions would be appreciated. Thanks.

In my 2001 Chevy S10 I could not find a good pass-through in the firewall. Too much stuff crammed into a small place.
On the S10, with the hood up and driver's door open, I found a hole in the driver's side fender that I could pass wires through and it came out at the door frame about 1/2 way up the door. I did not run the power cables all the way to the battering, but connected the positive lead to the + side of the fuse/breaker/relay box in the engine compartment and the gnd lead to a ground lug on the firewall. Fuses in each line. I then ran the power cord through the holes mentioned above and covered them with wire/cable covers that just slipped over them. The covers protect the cables from rubbing on the metal. The power cables then come in to the cab at the front/bottom of the door frame, get tucked under the plastic door jam, and then to the radio w/any exposed wire covered with more cable/wire covers. I put a small wire tie on the power cables just before they enter the door jam as a water drip point.

I'll get some pics and post them with the other pics of my installation in the photos/mobile installations section.
Hopes this helps or at least gives you some ideas of where to look.

# 14807. AT-11MP and W4RT OTT-100D

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-20 21:54:04 UTC
From: Dick Thompson
Topic: 14807  Message: 14807

I recently purchased a W4RT One Touch Tuning (OTT-100D) and an LDG Electronics AT-11MP Autotuner.

Is anyone using this combination with the Samlex SEC 1223 Switching Power Supply?

The AT-11MP requires 12 volts DC and I was wondering if I could safely draw the 12 volts off the back of the Samlex Supply where I hook up the 100D? The FT-100D draws 22 amps at 100W and the supply is a 23 amp supply. LDG Electronics says that the AT-11MP needs at least 0.5 amps. So, my calculations tell me that I may be pushing the envelope but should be OK.

The AT-11MP kind of "whirs and grinds" when it is tuning an antenna. Is this a normal sound? The tuner in my FT-920 is as quiet as a church mouse, thus the reason for my question. I am using the OTT-100D to throw the FT-100D into tuning mode. It's much easier than having to go through hoops and barrel rings to get the 100D into a tune mode. The slick thing about the AT-11MP is when I was using my 75 meter hamstick antenna at 3989 for the Columbine Net and the hamstick on 75 is about 20 kHz wide. After the net I tuned down to 3850, spoke into the mic and the tuner automatically came on and adjusted the antenna to look at a 1.5:1 SWR. I was impressed to say the least.

Any suggestions would be appreciated. W4RT says I really don't need their additional cables because the OTT-100D will work just fine as long as I connect their interconnecting cable between the Acc JAck on the FT-100D and the Radio Interface Jack on the back of the AT-11MP.

When the fires around here are out and we can find a green place to take a camper, the above combo will sure make hamming in the high country fun.

Chris,

I too have a 2001 S10. I found a place to pass the wires through along with the other wiring. I'll post some pics soon. As for where you took the power from, GM was at Dayton and they had a picture of their recommended power location for various cars. On the S10, they said to take it from just where you did. The ground should be on the firewall just below the cowling, there is a bolt with some ground wires already attached. You did the right thing! GM says that's the place for EMI reasons.

From: wa4npl
Topic: 14809  Message: 14809

I'm a Broadcast Radio Engineer, and ( bless it's heart) my old
FT-757 has matched many AM broadcast arrays using a
Delta OIB-3 in-line impedence bridge. It will make power well below
1Mhz and does a great job on PSK31 at 14.070 between jobs.
I would like to upgrade to the FT-100D, but if it can't be modified
to transmit in the AM broadcast band, Im going to have to still
carry the FT-757. I wouldn't buy a car that was restricted to only
interstates.... why would I want a radio that only transmits on
Ham bands ? Just act responsibile. And yes, I pull the labels off
my pillows and mattresses. :-) WA4NPL

# 14810. Re: Ext Speaker Socket

From: cat100bob
Topic: 14559  Message: 14810

--- In FT100@y..., "cat100bob" <b.hillard@w...> wrote:
I stand corrected - I took a closer look at the intermittant external speaker connector. The problem appears to be an intermittant solder connection of the external speaker connector to the FT100's PC board.

The problem is also there when not using the external speaker. I just never noticed it before as I always use an external speaker. I can move the FT100's board mounted connector and cause the internal speaker to become intermittant also (audio passes through the connector on the way to the internal speaker).

But I did find that if I put a constant downward pressure on the connector the internal speaker audio becomes constant. So I super glued a small piece of medium density foam material to the FT100's bottom cover. It is 5/8" in height, sufficient to put constant pressure on the board mounted external speaker connector. I used a piece of foam from a foam sanding block.

This is at best a temporary fix, and the radio will have to go back to Yaesu's repair center at some point for a permanent fix. It is not possible to get to the bottom side of the PC board without removing the board. A chore I don't want to undertake (and I used to manage a communications service shop).

I'm sure that there will be a sizeable repair bill from Yaesu for replacing this 25 cent item, and I'll be without the radio for a month or so. Let's hope that the foam material holds up for a while.

# 14811. Additional 2001 S10 Photos

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-21 02:28:42 UTC
From: ng3f
Topic: 14811  Message: 14811

I've added some close up photos of how I mounted my ATAS-100 to the bumper of my S10. Again, these are parts used from a Kenwood VP1 bumper mount. Couldn't use the strap on the new vehicle !!!

I also added some pics showing how I routed the power lead from the engine compartment through the driver's side fender wall and into the cab of the pickup. I couldn't find and feed through groments or a good place to drill through the firewall. The S10 just has too much crammed into a small space. The leads are protected from rubbing against the metal by plastic cable raps. Also, I did not go directly to the battery, but connected the positive lead to the + side of the fuse/relay box under the hood on the driver's side, and I attached the negative lead to a gnd lug on the firewall that was already there and handy. Plus there is a 25amp auto fuse in each lead.

From: radiotube321
Topic: 14803  Message: 14813

Well, if you want the simple rundown, here is my opinion:

1. The ICOM is easier to use/see and probably more durable. The icom probably has better sensitivity on the receiver, however.
2. The Yaesu is smaller, has more advanced features, better receiver, better DSP.

The Yaesu also costs less.

So if you have poor eye sight, want a simpler radio, or are really going to abuse this thing, you might want the Icom. Other than that, I think the Yaesu is the way to go.

What the hey? I hate to be a jerk, but here goes...

OT postings are not supposed to happen on this newsgroup because it's for the purpose of discussing the FT100, not general ham topics like the one posted above.

It's very tempting when you have the attention of 1900+ intelligent and helpful hams at your disposal to bring up any topic that pops into your head. However, if everyone did that, the group would quickly lose focus and people will start complaining. OT postings are a lot like flaming. Once you get them started, it's hard to put them to rest.

If you want to slip a topic like this under the radar, you must find a way to make it relevant to the FT100, such as, "Which Logging programs work best with the FT100?" Otherwise, we can get into a long discussion about a topic that is completely irrelevant to the FT100.

I investigated logging programs a few years ago and found LogEQF to be the best for my needs and it supports the FT100. However, you'll find that people become just as partial to their favorite logging programs as they do to their favorite rigs, so if you ask 5 different hams, you could get 5 different answers and you won't be any closer to a solution than when you started. Most of these programs have demo versions that you can try before you buy so you might want to go that route. The FAQ contains a list of logging programs that work with the FT100.

# 14815. Re: [FT100] Re: Off Topic, but don't follow up!

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-21 07:44:14 UTC
From: W6MDK@AOL.COM
Topic: 14812  Message: 14815

While I appreciate the "answer" to my questions, I most certainly do NOT appreciate the pedantic, lecturish, holier-than-thou portion of your response. A topic will be drawn into the nether regions only if there is a generalized tendency for that to happen, like when the thread becomes incredibly boring for the bulk of the people reading it.

I have seen a number of supposedly off-topic questions asked which ended up being quite informative and of great value, even though the topic did not match the name of the group.

If you wish to make a statement such as you made, at least do the rest of the good people on this reflector the courtesy of starting out your tome with a statement that the following is your opinion, for that is surely all it is.

I've been around ham radio long wnoug (42 years) to appreciate the serendipitous results that can find their way into the light from a seemingly irrelevant coooments.

So the bottom line is this. I think most of us would appreciate a decent "off-topic" question now and again rather than some of the empty-headed, inane questions with obvious answers that we see all too frequently. And I don't mean to discourage even those questions, because, in reality, the only stupid question is the one that doesn't get asked.

You have a really great tool to prevent the misuse of your time by questions like mine. Don't read them.

What I posted was not obscene. It was not political. It was not social. It was not religious. It was relevant to Ham radio. It was wriiten with reasonable grammar, style and vocabulary. I will continue tof eel free to make such postings when the muse strikes me in spite of your attempts to narrow the communicatin down in the avoidance of what I would term "sub-topics".

Tell you what I'll do. When I intend to post a question that I think might offend you, I'll preface it with, " The followoing question is NOT for K0LEE". Then you'll know its going to irritate you if you read it, and,therefore, you do so at your own risk.

The first amendment does not go so far as to permit an individual to yell, "FIRE!" in a crowded theater that is not, in fact, on fire. Short of that, its pretty broad. Don't tread on it.

My question to the rest of you remains.

Subject: [FT100] No! The FT-100 is ok for MARS use

I noted a message saying the FT-100 is not Legit for MARS use. This is incorrect! Army MARS is not required to follow NTIA regs nor (According to my chief) will need to do so in the near future. Army MARS stations working on Shares or FEMA channels do need to be NTIA approved but that is a different story. Now perhaps the USAF and Navy Marine Corp boys have a different program going that I don't know about?

The FT-100 is NOT approved for CAP use at this time.
The CAP NTIA approved list currently does not include the FT-100 or FT-100D for HF use since it's OSC stability is (I believe) 1 PPM and the current regs are .677 (or is it .667?) in any event "IF" you had a higher spec osc unit (As they provide for the FT-817) it would be "ok" for HF use. Since there is not 3rd party unit at this time that meets this spec it's no soap. The VHF side of the radio does not meet Recv specs. i.e. it is not "solid" enough from interference from nearby stations to be NTIA approved for (so called) wideband mode. It flunks Narrow (I would say Narrower Band) mode also.

Too bad - because it is a hell of a rig!

Yesterday I QSO'ed mobile with a station about 700 miles from me. He was running an IC-746 with a Gold Line mic and W2IHY eq run straight into the modulator. (One of those hi-fi guys.) I asked him to describe my audio, and he said it was "clear, clean, and nice and punchy."
I am noting this because I have been one of the disappointed ones as far as transmit audio in the FT 100. After the mic mod and other tweaking in the menu (and getting the RF out of my audio,) I am now happy!

Subject: Re: [FT100] Re: Off Topic, but don't follow up!

While I appreciate the "answer" to my questions, I most certainly do NOT appreciate the pedantic, lecturish, holier-than-thou portion of your response. A topic will be drawn into the nether regions only if there is a
generalized tendency for that to happen, like when the thread becomes incredibly boring for the bulk of the people reading it.

I have seen a number of supposedly off-topic questions asked which ended up
being quite informative and of great value, even though the topic did not match the name of the group.

If you wish to make a statement such as you made, at least do the rest of the
good people on this reflector the courtesy of starting out your tome with a
statement that the following is your opinion, for that is surely all it is.

I've been around ham radio long wnoug (42 years) to appreciate the serendipitous results that can find their way into the light from a seemingly
irrelevant coooments.

So the bottom line is this. I think most of us would appreciate a decent "off-topic" question now and again rather than some of the empty-headed, inane questions with obvious answers that we see all too frequently. And I
don't mean to discourage even those questions, because, in reality, the only
stupid question is the one that doesn't get asked.

You have a really great tool to prevent the misuse of your time by questions
like mine. Don't read them.

What I posted was not obscene. It was not political. It was not social.
It
was not religious. It was relevant to Ham radio. It was wriiten with
reasonable grammar, style and vocabulary. I will continue tof eel free to
make such postings when the muse strikes me in spite of your attempts to
narrow the communicatin down in the avoidance of what I would term
"sub-topics".

Tell you what I'll do. When I intend to post a question that I think
might
offend you, I'll preface it with, " The followoing question is NOT for
K0LEE". Then you'll know its going to irritate you if you read it,
and,therefore, you do so at your own risk.

The first amendment does not go so far as to permit an individual to yell,
"FIRE!" in a crowded theater that is not, in fact, on fire. Short of
that,
its pretty broad. Don't tread on it.

My question to the rest of you remains.

I dont think Lee was being out of line with his answer, it is best to keep things FT100 related here due to the group size. Like he said, formulate the question in relation to the FT100 like:

1. "I have a 1600 square foot house, I am looking to cool my base FT100 down to prevent final overheating, what size a/c unit should I get."

It skirts the OT designation as it gets the message across without being off topic. Anyway, I dont use logging programs, just paper :-) but I am sure someone out there will help you get one that will fit your needs and work with the FT100. Good luck Richy N2ZD

Topic: 14812  Message: 14822

Hi Mike,

I have tried several and they are all pretty good. I decided to settle on Win-EQF by Tom Dandrea (n3eqf@...) and I've had no regrets to date. The program costs $59.95 but Tom is always available to answer e-mail questions, and the updates (which he provides on a regular basis) are free. The paid for version comes with Win-EQF Contest, a version that you can set up for any contests that you may get involved in. And if you have a problem with that, Tom is available for help.

You can download a full working version of the program at http://www.eqf-software.com/. After you enter 25 QSO's into the program a nagging screen comes up, but it doesn't shut down the program. Also, if you have questions about the program operating with Windows ME, I'm sure you will get a quick response from Tom if you drop him an e-mail. There are 2 versions of the program; Win-EQF (Windows Version) and Log-EQF (DOS Version, I believe). A friend of mine, KFØUR, Shel, here in Colorado Springs was a beta tester for the program. He uses the DOS version, but they both look the same, and the updates that Tom provides seem to lean towards the Windows version, but I may be wrong on that, since I only check for the Windows upgrades about once a month or so. The program also operates well with CAT support and I use it with my Yaesu FT-920. You can disable the CAT support and do the entries manually if you have another program running at the same time that uses the CAT controls.

I hope the information helps. Like I said, there are many nice programs out there and some of them are free. But when you get a freebie, you can't really expect any support if there is a problem.

Good luck in your quest for a logging program. I'd be interested in hearing what you finally end up with.

73,

Dick

I am not actually the owner of this list. I help James moderate it and I am the keeper of the FAQ. Being a moderator is not a fun job. It's hard to post a comment related to moderation without sounding "pedantic, lecturish, and holier-than-thou" as Mike puts it. I've also been accused of being a "stuffed shirt, spoiled sport, crybaby, and having no sense of humor". :-)

I understand how Mike feels. I've been moderated on mailing lists before and it can be quite annoying.

Each time I exercise the duties of a moderator, I accumulate a few new enemies. But without some moderation the list takes takes on a nastiness or lack of focus that drives people away. Check out the Usenet newsgroups if you want a taste of an unmoderated list. The noise level gets so out of control that it ceases to be an asset to its members.

So when a member says that he's going to take the list off topic and there's nothing that can be done about it, it sends the wrong message to other members who are abiding by the rules. This list is mostly unmoderated, but if a member attempts to flout the rules it can be done on an exception basis.

So, enough pedantic lecturing from me, let's return to the matter at hand, i.e., the FT100.

73,

Lee Devlin, K0LEE

# 14826. Off Topic, but don't follow up!

You should use geothermal cooling. Now let's discuss Utility Company politics. When the Utility Company arrives on your property, use your illegally modified FT-100 to talk them in. Because there is freedom of speech here, and you can use your FT-By-God-100 anywhere you damn please! Because you are a white, heterosexual, God-fearing, gun-owning, voting, male. And to do so would somehow keep bootleggers off the ham bands and on Public Service frequencies where they belong.

<wink-grin>

Chas,

I wish you would consider using terms other than "requires modifications" in your answers because your experience in that area is not really a "requirement" and it gives people the wrong impression about the design of the rig. I personally know 12 FT-100 owners and only 1 of them has gotten the SWR and Fan mod. Some of these have been in service for 2 years with no problems. Nobody I know has gotten the mic mod and they are all very pleased with the rig's audio. Your experience with your mag mount antenna leaves room for debate as to whether the rig really needed the SWR mod...it MAY have needed it, but the mag mount installation leaves room for blame as well.

Just to show you I'm balanced here, I did have a friend who got his brand new FT-100D that was DOA on semi-break-in CW. It worked perfectly on full break-in (and everything else), but went "key down" when transmitting in semi-break-in mode. It was very strange. Since he and I are primarily CW ops, that was a bad thing and he had to send it back to AES who gave him another unit that worked perfectly. Now he's happy and the rig runs great.

This probably won't influence you a bit, but readers of the reflector should hear about positive experiences as well.

The 100 takes 2A on receive/standby. Up to 20A on TX. I highly doubt any car that starts cannot handle that.

Hi Mike,

Maybe not so far off topic because interfacing to the FT-100 is probably one of your considerations for choosing a logging program. You didn't say what your area of interest is but here is my thumbnail opinion of widely accepted logging programs.

WriteLog - Windows based and probably the best all around, do everything program.
TR Log - DOS based but fabulous for CW (primarily), SO2R (Single Op, Two Radio) contesting. (This is the one I use.)
CT - DOS or Windows, stable, easy to use and great for networking multiple stations.
NA - CT clone and not getting much support these days, but still good alternative.

All interface with the FT-100 but may require using the FT-1000 instruction set.

Good luck,
Bob K5WA

# 14830. Re: FT100 vs IC706 comparison

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-21 15:27:49 UTC
From: backhoefade
Topic: 14803  Message: 14830

Fair enough Bob - here's my positive input from that same post

"Here it is in a nutshell (well, actually in a neat compact cabinet). The FT-100D has the superior receiver in terms of front end overload, strong adjacent channel signal rejection, superior noise blanker performance, the ability to receive above 460 MHz and the inclusion of variable bandwidth DSP filtering in both CW (down to 60 Hz) and SSB operation. If you're a "receiver nut", also if you operate CW a lot, I strongly advise going the FT-100D route. It is an excellent receiver and the variable bandwidth DSP filtering is great for crowded CW conditions (and also for crowded SSB). The 706 doesn't have variable bandwidth DSP which to me is missing the whole point when it comes to DSP filtering."

How much better could I endorse and promote the FT-100D? The receiver is great! I'm super happy with my FT-100D. I'll modify my 'mod comment' to say that there is a certain percentage of them that need the mod to eliminate the spurious issue. In my case I had to have the spurious mod done since I was getting the oscillation when I operated on perfectly good, resonant, base antennas such as inverted vees and verticals on both 24 and 28 MHz. I will experiment with a heavy ground strap to try to tame the operation with the mag mount antenna, since I'm still sometimes seeing the SWR icon pop up and the power fold back with that mobile antenna, despite having had the Yaesu spurious mod done.

It's advisable to do the fan mod if you plan to operate VHF/UHF for long receive periods since the rig has a tendency to heat up without the mod and heat means shortened component lifetime, plus some people have reported loss of receiver sensitivity when it warms up too much.

I would not really think any differently than I do. "Owner" is an odd term to use. No-one really "owns" the group, especially since it is on Yahoo, which the "owner" of the list certainly does not either own or control.

I am NOT an internet "anarchist" by any means. But I do not consider an "off-topic" question, if it is at least related to the reflector topic, to be an improper post, nor do I beleive that the "owner" of the list has an absolute right to control the content of the list, as long as the content is courteous, well stated, related to the main topic and not offensive to anyone.

If anyone can tell me, legitimately, what was offensive about my question, I will gladly take that particular sack of marbles and play elsewhere. If not, then exactly WHAT was the problem?

Have I missed something about all the other "off topic" questions that have been asked on these various reflectors?

Let me take it one step further. All the questions concerning RFI and antennas (specifically the ATAS-100) could, if you want to stretch it, be considered "off topic" as the ATAS-100, although useable with the FT-100D, is NOT the FT-100D. It is something to be used WITH the FT-100D. QUestions about mounting ATAS-100s on Fords, Chevys and bicycles are distinctly no more FT-100D related than is one about a logging program for use with that rig. So is a logging program. So are microphones other than those which Yaesu ships with the FT-100D.

My points are, simply, that:

1. The question was not "off-topic". It was off subject, but related, as it involves the operation of the station which includes the FT-100D.

2. The forum is not OWNED. it is moderated.

3. My question should not, by any stretch of the imagination, have offended anyone, unless that person was looking to be offended.

73,

Mike

Mike.

# 14834. FT100 SWR mod Tents

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-21 15:41:55 UTC
From: lhlousek
Topic: 14834  Message: 14834

Hi Robin,

Saw your post on the FT100 reflector and photos on your web site. Nice web site BTW!

The tents in your FT100 look like they'd be easy to duplicate. I have adhesive backed copper tape that looks exactly
like what was used in your radio. From your photos appears that the tents were formed by applying the tape over a thin
insulating sheet of cardboard like material. Is this true?

The tent over the three little vertical boards appears to be electrically connected to the low shield toward the middle
of the radio. Is it connected anywhere else?

The tent over the relay looks to be electrically connected to the shield of the coax connector right next to it. Is
that the only place of connection?

>
> The AT-11MP requires 12 volts DC and I was wondering if I could safely draw the 12 volts off the back of the Samlex Supply where I hook up the 100D? The FT-100D draws 22 amps at 100W and the supply is a 23 amp supply. LDG Electronics says that the AT-11MP needs at least 0.5 amps. So, my calculations tell me that I may be pushing the envelope but should be OK.
>

Dick,

You're probably ok. The One Touch activates the rig to 10w (I believe) for tuning, so you really aren't running the rig at full power _and_ tuning at the same time. The tuner uses latching relays, which shouldn't draw much power once they have found a match. Which leads to your second question.

> The AT-11MP kind of "whirs and grinds" when it is tuning an antenna. Is this a normal sound? The tuner in my FT-920 is as quiet as a church mouse, thus the reason for my question

The AT-11 is using a dozen or so latching relays to swap in and out discrete L's and C's (it's really an L-C tuner, like a MFJ 16010 long wire tuner) at very high speed. You're hearing the relays which is perfectly normal.

I believe your 920 is using variable C's being driven by servo motors which obviously will be very quiet.

Enjoy, and let us know how the combination works out.

# 14837. Mobile Antenna Mounts

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-21 17:33:42 UTC
From: Ed_Meyer
Topic: 14837  Message: 14837

I've learned a great deal about mobile radio mounts from this group but I've not found anything thus far to help with mounting my inherited Hustler antennas on my 2001 F150 Supercrew...
I was originally going to punch holes in the left rear fender and use a "standard" ball mount but I think a bumper mount might (on the left corner of the bumper) be as good and less invasive. The bumper, however, has a rubber mat on top.
When looking at the Hustler BM-1 (on the Newtronics web site) I really haven't a clue as to how it attaches. I see a couple of "J" bolts but that is confusing....
I'll take a closer look at some mounts this weekend at Field Day but if someone has some experiance with bumper mounts, please share.
I also have not yet run the power leads to the battery (and thus have not installed the FT100D). I've always taken the easy route (with VHF/UHF installs) to the interior fuse block and that has been suffecient until now. Does anyone has specific, good, results in finding a gromet with room to spare in the 2001 F150 firewall?
Thanks to all for the Mod Info. I've done the Fan resistor mod and Mike mod and the FT100D already had the SWR mod factory installed (but with not as much sheilding as shown in some of the photos)...

# 14838. Hustler Bumper Mount

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-21 18:07:40 UTC
From: backhoefade
Topic: 14837  Message: 14838

I had a Hustler bumper-mounted ball type mount on my old college car, a 1968 VW Camper. (Highly relevant is the fact that I just donated it to the Church of Uganda Children's Hospital leaving me wondering if perhaps some day my wife and I, during a post retirement world trek, might happen upon the thing, sans wheels, sitting amongst the giraffe and lions with a red cross painted on its side. Of course the reality is that they fix it up and sell it, or part it out, and give the money to the church).

As I remember it the bumper mount was attached using some stainless steel straps and U-bolt clamps that grab the top and bottom edges of the bumper. After taking the slack out of the straps you then tighten the nuts on the U-bolts to secure it. I used several Hustler whips with it; even a 108 inch whip with no trouble. It's pretty solid once you tighten it down well and worst case all it does is leave some small grooves in the bumper. It's worth a try. My Honda Prelude is not antenna friendly. Like many imports it lacks the solid metal bumper of a pickup and the body metal is so thin you don't dare mount a wind loaded antenna onto it even if you don't mind making the hole. That's why I've been trying to make this mag mount work, but it looks like I need to add a solid ground to the base.

# 14839. FT-100D is back

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-21 18:10:16 UTC
From: Markus.Homma@t-online.de
Topic: 14839  Message: 14839

Hi group,

my FT-100D is back. :-)
I sent it in because of the DCS Signal Level but the technican
told me that the level is proper set.
He also checked two other new FT-100D's and the level is the same.
Ok...so i will live with the "high" dcs level....;-)

Last weekend i put the FT-100D with the FC-20 at my FD-4 windom.
I was sitting in the garden it was a beautiful day and i tuned on 40m.
All was ok....
Then i switched off the tuner to see how the swr is and transmitted with
full power in FM.
After i released the ptt the received signals were gone.
It sounds like a 60db att were engaged ;-)
Also no output on SSB...FM and AM transmission was ok....
So i decided to switch off the unit.
After power on all was ok. (Thank god!)

So i think and i hope it was only a problem of RFI and that maybe a relay
hung.
Tomorrow i will try it again...
Anybody had the same problem?

Thanks, Bill. I was concerned that the power was not being cut back when I hit the OTT switch. I guess it is, even though I get an indication that it's at full power. The first time I used the OTT-100D I was surprised that the 100D went into AM mode as opposed to CW mode to produce a carrier for tuning. Maybe that's the secret. As long as I get the carrier that is needed for tuning, I guess the mode it does it in is realy a moot point.

Appreciate your response. I was off the air (except for VHF/UHF) and all these new toys for tuning can be mind boggling. My xyl looked at my shack the other day and asked if I was close to being done buying things. I didn't say no, but I told her I was slowing down. Hi Hi.

Mike,

There was nothing wrong with the question at all, just the way it has been phrased, you risk stirring up a few here that only chime in with their superfluous email stories and complaints. Then they go back into the wood work for a few months only to complain again about some excess email in the future, in essence they want you the user to manage their email for them.
If you noticed approx 50 people or so actually contribute anything here, thats ok but a group with about 2k members will generate lots of email. Then the complaints start from the "silent" and Lee has to act. I have been in the same boat my friend. But my approach would be to ask that those who need to keep their mailboxes lean and trim simply log onto the site to peruse the offerings. I dont think Lee was asking you to pose your question elsewhere, he was simply asking that you keep it in line with the FT100. Richy N2ZD

Richy,

Good response. Its interesting that my biggest detractor is not the moderator. It is another individual who has chosen to take offense at either the topic itself or some of the things I said. It really doesn't matter, since no real offenses have been committed by anyone that I can see, and if someone wants to be offended easily, he is free to do so. Makes me wonder what offenses he feels he has, himself, committed.

By the way, have you noticed how many posts on the "FT100" forum are about antennas and mounts only, with nothing to do with the FT100? Obviously, my mistake was in acknowledging at the outset that my question was not directly related to the FT100. Obviously, the subject line is more important to some people than is the content of the post itself. So be it for forthrightness, eh?

I wonder if there really are as many as 50 substantive posters to this forum. I actually think its fewer, although all posts have the potential of providing some piece of information that will be of value to one or more of the readers, and that, after all, is what this whole thing is for. It is not for complainers to complain. Its for hams to glean valuable, helpful information aimed at making the hobby more productive and enjoyable.

You, my friend, are a prime provider of that valuable information, especially for us old timers who have been away from radio for some years, and I thank you for the care and thought you put into your posts.

You are, in my opinion, an asset to amateur radio, a sport that can badly use all the people assets it can find.

73,

Mike

> suggestions would be appreciated. Thanks.

In my 2001 Chevy S10 I could not find a good pass-through in the firewall. Too much stuff crammed into a small place.
On the S10, with the hood up and driver's door open, I found a hole in the driver's side fender that I could pass wires through and it came out at the door frame about 1/2 way up the door. I did not run the power cables all the way to the battering, but connected the positive lead to the + side of the fuse/breaker/relay box in the engine compartment and the gnd lead to a ground lug on the firewall. Fuses in each line. I then ran the power cord through the holes mentioned above and covered them with wire/cable covers that just slipped over them. The covers protect the cables from rubbing on the metal. The power cables then come in to the cab at the front/bottom of the door frame, get tucked under the plastic door jam, and then to the radio w/any exposed wire covered with more cable/wire covers. I put a small wire tie on the power cables just before they enter the door jam as a water drip point.

I'll get some pics and post them with the other pics of my installation in the photos/mobile installations section.
Hopes this helps or at least gives you some ideas of where to look.

73's
Chris, NG3F

# 14851. Concerning My RFI Problem (With My FT100D)

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-22 01:17:20 UTC
From: w6mdk
Topic: 14851  Message: 14851

I was able to mitigate the problem to a small extent by cranking up the value of the noise blanker. It is far from an ideal solution, but some of the major pulse noise has decreased, amaking it a bit easier to read the signals.

If anyone else is having the same problem, try cranking the the NB setting up to about 12.

73,

Mike

# 14852. Getting boring - fire it up!

Yahoo group: FT100 (2002-01 — 2002-06)

From: backhoefade
Topic: 14852  Message: 14852

Although we all prefer to spend our free time often playing with the FT-100(D) there are times when we just want to relax and gab on this FT-100 website. I stopped in a few times over the last few days and sure was disappointed to see the discussions grinding down to a genuine "thermal death" level (pure randomness without possibility of energy transfer or conversion); a paucity of tech content and a pile of swipes at each other about the lack of relevance or substance in recent postings in our community. I think I was among the accused for providing empty, simple minded, comments about bumper mounted antennas. Fair enough! Let's get things going again then and let the ultra sharp technical critics have something more interesting to chew on.
Try postings 12769 regarding receiver design; S meter info in post 14701 including referenced Excel spreadsheet info, and AM operating info for the FT-100(D) in post 10277 for starters. A little antenna discussion never hurts either.

Hello zoltan!

I bought mine two months ago in germany.
The price was 1440 Euros for the "d" model.
It is one of the latest production series, December 2001

I hope this helps you a bit!

Betreff: [FT100] FT-100D EU price

Hello,

I am new to this list, but it seems to be very useful... for a
FT-100-beginner like me also.
Can somebody inform me about the lowest prices in Europe (Italy,
Austria,
Germany,...) for the FT-100D?

If somebody bought one in the last 1...2 months what are the manufacture
year / serial number?

Thanks in advance!

# 14855. Fan Mod.

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-23 10:58:24 UTC
From: Neville Mattick
Topic: 14855  Message: 14855

Living in a temperate to warm climate and having an obsession with
reliability, running equipment cool is one of my habits.

The original fans on my FT100 were noisy, rough in the sleeve bearings
and only on with TX.

A common part from repair wholesalers is the bearing version of this fan
in a 20mm deep body. The two I purchased for this job were 0.1A lower in
current demand.

To have them ticking over during RX I added a 47R 1w resistor as in the
fan mods along with a 1000uf 16v electrolytic in parallel to ensure the
fans started *every* time the rig was powered on.

Now it was a cool day here and I had a long qso over our local rep' with
VK2CA, no heat in the rig at all, good result.

The bearing fans are almost silent on receive and barely audible on TX.
Put a pic at:

# 14856. homebrew rs232 converter , anyone done one ?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-22 01:09:15 UTC
From: n7bfs
Topic: 14856  Message: 14856

I would like to try and build my own level converter for my FT100d (ala maxim chip). Just wondering if anyone else has , or if there is a schematic available of the yaesu cat cable , so I can just duplicate it , I don't want to buy one right now as I have the chip and probably associated parts , just need to know which pins on the radio and if its just tx/rx and gnd on the rs232 side or if it uses any of the handshake lines ...

Any help would be appreicated .

# 14857. FT-100D Noise Blanker

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-23 15:43:05 UTC
From: Ed Juge/NM
Topic: 14857  Message: 14857

Hi, all...

I'm new to this group. Been lurking for a week or two now.

I've been using an FT-900 in 3 cars over 8-9 years. Always had lots of noise. Present car is a 2000 Durango... S9 ignition noise, reduced to S7 by the 900's NB. A ClearSpeech DSP allowed some limited operation on SSB and even CW. Although this box is able to actually pull signals out of the noise and make them readable, there are still weaker signals not copyable. I have bonded hood/fenders/grill/firewall/exhaust/engine, to no avail. And it's all coming in on the antenna.

For a couple of weeks, I've been reading all I could find on the Net about ignition noise and noise blankers. Last week, I was in Burbank, CA. (My mountain village has no ham dealer.) I tried and bought a new FT-100D. Installed it yesterday. Without the blanker, noise level was S7-8. With the blanker... ZERO. Not a trace on the meter or by ear. M-A-G-I-C !!! Once in a great while, a faint trace of noise will try to ride in on a signal (SSB). The ClearSpeech kills it completely along with most other background noise. A signal of S3 or so now sounds like 2-meter FM.

I've been fighting motor noise for so long, just had to share this experience and, hopefully, provide it for others searching for a solution as I have been. I plan to be far more active on the bands from my car during 2X/month trips to airports 135 miles away. WOW... still can't believe it.

Topic: 14858  Message: 14858

Hi Chris,

I have a Yaesu FT-920 and love it. I noticed that the FT-847 does not have VOX capability, but since I have not used the 847 to any great length, I feel that I shouldn't comment on any problems it may or may not have. I have a friend who has one and he likes it very much.

Good luck in your decision.

73,

Dick

Hi all FM´s!

As i am seriously thinking of completing my station with one of the
above radios, i like to hear some opinions of OM´s which have made some
experience with that radios.

I have seen all the commentaries on eham.net , but both get almost the
same points....

The radio will be used mainly on SW....(but 2m is also not bad..??!!!)

TNX for any comments!!!

That's a great story, Ed. It sure makes life easier when you finally get things working like they should. I'm not familiar with the 900, but is there a possibility that perhaps there is a problem with it, or do you think the noise blanker and DSP are just superior on the FT-100D?

I assume the Clear Speech you are referring to is the speaker that has been advertised in the magazines.

Thanks for sharing the story. It speaks highly for the FT-100D.

# 14860. Re: [FT100] FT-100D Noise Blanker

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-23 16:46:33 UTC
From: Ed Juge/NM
Topic: 14857  Message: 14860

Hi, Dick...

In my reading about ignition noise and blankers, I saw several comments about the 900's blanker being very poor. There is some kind of "fix" for that but I was never able to find the official Yaesu bulletin, or enough detail to feel comfortable with trying it.

Mine read S9 on noise w/o the blanker and S7 with it. The mod involved removing a surface-mount chip resistor and replacing it with either another SM or a small 1/8-watt resistor, the value of which needed to be hand picked for each individual radio. Apparently, there was nothing wrong with mine. Aside from the NB problem, the 900 was considered a classic by many and I'm told is still in high demand as a used radio.

The short answer is, the 100D is really that much better. And, it offers some audio DSP enhancements not available when the 900 was built. As an IC-756PRO owner, I was a little disappointed to see the DSP working at the audio level rather than IF... but it is still beneficial.

If the setting for the ATAS-100 Antenna is either 1 or 2 the rig will not transmit on 80 Meters. The ATAS needs to be set to OFF. I believe it is Function # 61 that you need to check.

Good luck and 73,

Well, the problem is solved and that's the main thing. I was going to consider buying an ATAS-100 antenna for my FT-100D and after reading about all the problems with tuning, grounding, etc., I decided just to use my hamsticks that I had. Well, while in Las Vegas a couple of weeks ago, I went over to AES and bought a new LDG AT-11MP Autotuner and a Samlex switching power supply. Both are really great and the tuner is fantastic.

Enjoy your 100D. The only mods I've made to mine are the mic mod and the fan mod. All else has been OK, so far. I'm hoping it continues that way.

Hello FT100'ers, someone sent me a mail perhaps regards my post of the improved fans for the rig.

However this was inadvertantly deleted on my POP3 server.

My apologies!

Send again.

Perhaps I should mention the source might answer [from the email subject], here in Australia they are common for PC wholesalers, or in my case Wagner Electronic Services.

TITAN brand, FAN402032 BALL BEARING [1]. 0.07A 40mm Square, 20mm Deep.

If the setting for the ATAS-100 Antenna is either 1 or 2 the rig will not transmit on 80 Meters. The ATAS needs to be set to OFF. I believe it is Function # 61 that you need to check.

Good luck and 73,

Mike

Thanks for all who supplied the price infos...
The lowest USA price found: $789.95 @ Burghardt:
The lowest EU price found: 1383.98 EUR (~ $1300)

I am wondering why is this BIG price difference - more than 75% more
expensive in Europe???
Has somebody the explanation? I think the radios are 99.5% the same...

# 14874. Re: Mobile Antenna Mounts

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-24 19:16:30 UTC
From: pmp4me
Topic: 14837  Message: 14874

I didn't go through the firewall with the power cable but went from the battery underneath my 2001 F150 Supercrew and came up through one of the *many* rubber grommets available underneath, some located near the edges of the floor where you can sneak it up at the carpet edge. Did the same with the coax cables. I mounted the unit under the rear seat with a Radio Shack amplified speaker pointed forward and put the control head up front, floor mounted on a 9 inch cell-phone pedestal. If you spend much time with the rear seat folded over then mount the speaker somewhere else ;-)

As far as antenna mounting, I used the ATAS and mounted it with a simple L bracket and bulkhead double-female-SO239 on the inside of the bed, driver side, about an inch down from the bed top and about an inch away from the tailgate.

# 14875. 100D Price & Mods

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-24 20:57:35 UTC
From: ke9v
Topic: 14875  Message: 14875

Received my new FT-100D a few days ago. $789.95 from HRO with free shipping. Since the price dropped so much on the ATAS-100 I got one too.

I've been using the new rig in the house so far and am quite pleased with it.

I have read with interest all the comments about the fan modiciation. I haven't noticed a heating problem, although I have used the rig mostly on SSB and not FM.

Does this mod fix a problem with earlier SN#s that has since been fixed or should I be considering the modification?

Thanks.

Jeff

First of all, the fan issue doesn't have anything to do with the modulation choice; it's strictly an issue when you operate long periods of receive only on VHF or UHF. The problem is that the fans never turn on during receive (except for about 10 seconds following a transmission) so the rig tends to heat up.
I have never heard yet of a new FT-100D out of the box with the fan issue fixed. The Yaesu mod consists of adding a temperature sensitive switch to the VHF/UHF PA section. Some people have instead opted to add a resistor which keeps the fans spinning at all times while receiving. It's been described how you can make that resistor mod without soldering or cutting wires so you could presumably remove it if and when you need to send the rig in for warranty work. (It's possible that Yaesu might void your warranty if they saw that resistor mod in there). If you're not a VHF/UHF operator you could just skip it. But I would prefer to have either the Yaesu mod or the resistor mod in there just in case you find yourself using the rig as a public service monitor receiver on occasion for example.

# 14878. Baycom modem and FT100

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-24 21:27:20 UTC
From: Frank van Wensveen
Topic: 14878  Message: 14878

Hi, everyone,
Long ago, when I was in school and still had a semblance of innocence (it's that long ago) I built one of those small and simple Baycom modems with just a Texas Instruments TCM3105 AFSK modem chip with a few extra components. I used this to do packet with my old Yaesu handheld (now deceased) and a simple DOS program.

I still have the modem and a friend in South Africa asked me to see if I can do packet anytime soon.
Can I connect my old Baycom modem (that used to be connected to the mic and speaker bus on my old handheld) directly to the FT100 DATA jack? (Using the 1200bps line, of course.) Do I need to worry about signal levels? Anything else?

All suggestions would be appreciated.

73,

Frank PA3GMP

Jeff, if your fans run constantly when you are in VHF/UHF mode, then the mod has been done on the radio you received. If they only come on when you transmit on 2m & 70cm, then the fan mod hasn't been done. A recommended mod is the mic mod. As for the SWR mod, well, some say you need to have it done and others disagree. Personally I've never had a problem with high SWR and when I did it was because I had a high SWR. Duh!

I added the Samlex switching power supply (SEC 1223) and the LDG AT-11MP Autotuner. The tuner is one of the best. You may not need the tuner for the ATAS-100, but possibly might for base station use, depending on the antennas you presently have.

You can find all the mods at several web sites and I'm sure you will have no problem finding them.

Have fun with your new xcvr, it's a great little radio.

# 14882. Fan Mod

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-25 00:41:35 UTC
From: backhoefade
Topic: 14875  Message: 14882

Just wanted to clarify one thing on the fan mod. If Yaesu has done the mod where they add a temperature sensitive switch to the rig then the fans will automatically turn on while receiving in VHF/UHF when the rig reaches a certain temperature, but they won't run all the time; only when the rig gets to that threshold temperature.
If the rig has the "resistor mod", which wouldn't be expected on a new radio since Yaesu doesn't do the fan mod that way, then the fans would indeed run all the time, regardless of temperature.
Ditto Dick's comment, have fun with the rig, the receiver is excellent!

There is an error in my last response to you. The HRO site is: http://www.hamradio.com/

Not sure how the 73 got on the end of the address. Sorry.

73,

Dick

From: Dick Thompson
Topic: 14884  Message: 14888

I wanted to do the same thing, Jeff, but when I looked under the hood of my Buick Regal there was so much crap in that small engine compartment, I figured I wouldn't be able to get a drill in there to drill a hole for the power cord, let alone get coax run. Hi Hi.

Oh well, it made the XYL happy. But it's a different story in my F-250 Pickup. I'm all set for H/V/U in it as well as in the Prowler trailer I pull with it. Now if the Pike National Forest around here would just quit burning, I'd go camping. :) Actually, the firefighters are getting the upper hand with the Hayman fire which is very close to us here. All we need is rain, rain and more rain. The fire has not advanced for 3 days and that's a first in 16 days of fighting it. Like I said, send rain and lots of it.

Thanks to all for the explanation on the fan modifications!

I have been enjoying the FT-100D very much and look forward to taking
it on the road with me when I leave for vacation next week.

73, Jeff

# 14890. Re: [FT100] FT100D Fan Mod

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-25 15:18:23 UTC
From: Dick Thompson
Topic: 14884  Message: 14890

Rob, use a 51 ohm 1/2 watt resistor. If you use a higher value resistor, the fans will run a little slower. I think the majority of us who have made the mod ourselves have used the 51 ohm resistor.

I did mine based on what another guy on this reflector passed on to all of us. Since my 11D is still under warranty, I didn't want to do any soldering inside the cabinet. So, I shortened one lead on the resistor (about 1 inch long) and pushed it firmly into the plug that goes from the fan to the circuit board. You want to use the black wire on either fan, it makes no difference which one you use. Just be sure (if you are not going to solder the resistor in, that it is firmly in place. Don't push it into the top of the plug far enough to destroy or cause the plug to break, just so it stays in place. If you decide to solder it in, just use one of the black wires.

On the other end of the resistor I formed a small loop and made it long enough to reach the hole that the screw in the top of the cabinet goes in. I positioned the loop so that when the screw was inserted into the hole it also went through the loop at the end of the resistor lead. When I tightened down the screw, the mod was complete.

Now, when I turn on my 100D, the fans immediately come on whether I am in HF or VHF/UHF, where before, they only came on when I went to HF. Unless you press the PTT button on your mic they will just run continually. If you press the PTT button they will speed up and when the rig cools down the fans go back to idle running, I don't even notice them running now. My rig is cool all the time. There are times when I get long winded on a transmission and the top of the rig heats up, but nowhere near like it did before I made the mod.

As for the other mods, I did the mic mod. But the High SWR mod has never occurred, and I recently purchased an LDG AT_11MP Autotuner for use with the 100D, so I'm hopefully safe. Only time will tell.

The fan mod and the mic mod are extremely easy to do, and you should have no problem. The mic mod resulted in people I know asking if I had bought a new mic for my 100D. They said I had more audio punch and the "slightly muffled" sound I had before was no longer evident.

Good luck,

73,

Dick

# 14891. ARS question

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-25 17:49:06 UTC
From: Zoltan Bordas
Topic: 14891  Message: 14891

I own a VX-5R bought last year and I am very satisfied with it.

However, because it was bought from HRO, it has the USA bandplan, unfortunately not possible to modify. So I missed a very nice feature, the ARS - automatic repeater shift.

My question is : if I'll buy a FT-100D from a USA dealer I will loose this facility too, or on the FT-100 this can be reprogrammed or changed in order to work according with the EU bandplan?

Thanks!

# 14893. Re: FT100D Fan Mod

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-25 20:03:41 UTC
From: backhoefade
Topic: 14884  Message: 14893

I strongly recommend the mic mod. What you will find is that most people will tell you that your audio is "OK" or "no problem there". If you really push for an honest assessment you will find 8 out of 10 people will finally tell you that it sounds like a --- well, like an FT-100(D); i.e. somewhat muffled and bass sounding. You see, Yaesu put a plastic "baffle" in front of the electret mic element to act as a "noise cancelling" device. I guess they were figuring a lot of people would find themselves barrelling down the freeway in an open Jeep with gobs of wind noise. The downside is that it greatly muffles the audio. A description of the mod is at http://www.mods.dk

N2ZD, Richy, was the originator of the idea; I expanded on it a bit by completely removing the baffle rather than turning it slightly. It really makes the rig come alive. I get excellent transmit audio reports now, both on SSB as well as AM (using the 6 kHz filter when operating AM; also described at that website.)
Good luck and enjoy your high performance receiver.

OK. Hope it works out for you. You certainly won't regret the mic mod because it does make the audio at the receiving end much better.

Have fun with the rig.

For those who are keeping track of these things:

Shipped to Yaesu - 21 May 02
Arrived at Yaesu - 29 May 02
Returned home - 19 Jun 02 (UPS 3-day)

Total away time was 29 days, my door to my door.

I have made photos before and after the service, which was to have the "standard" mods done. There was nothing wrong with the radio that I could tell; it was working great. When the "after" film is processed and the negatives scanned, I shall post the before and after images, if anyone is interested.

My radio does have the "copper tents" added.

There is no dot, red, blue, green, yellow or any other color on the box. There is, however, another label, which specifies what's in the box, the customer number, who the technician was (maybe, it has someone's name on it, I assume it was the tech), and a few other items, on the end of the box opposite the original label.

The Repair Shipment Pack List shows 2 THERMAL GUARD OHD3-40M. That's two (2) of those. Why two? I know the FT-100D has separate HF and V/UHF PAs, maybe they put one over each set? I didn't really pore over the innards while I had it open for the photo shoot; I was kinda eager to get the radio back into the Jeep so I could get back on the air. I just hope I took photographs with enough detail!

Does the -40M mean the switch will close at 40C?

There were 10 each Ceramic Cap 0.01mf at 50VF, 2 each B4134490 fittings, 2 each B4132840 fittings and 1.5 hours of AM Repair.

Things seem to be working as before. It still auto-tunes the ATAS100. I'm having to redo all my settings, because they all got reset, as expected. If I could just do something about the band conditions of the last few days. . .

That's it. Glad to have my '100D back where it belongs and in a lot less time than I anticipated.

Turner - WA4MQY

PS I included the microphone, but they didn't do that mod. I did that myself the next day.

# 14897. ATAS-120 is coming

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-26 05:00:13 UTC
From: Don DeGregori
Topic: 14897  Message: 14897

After surfing around various mobile antenna sites, I see Universal Radio is dis-continuing the ATAS-100. They say a new one from Yaesu will arrive July 31, 2002. No picture or specs yet.

# 14898. Considering the FT-100D

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-26 11:04:05 UTC
From: vhfradiobuff@aol.com
Topic: 14898  Message: 14898

Hello everyone. I subscribed to this group because I am seriously considering buying an FT-100D. It seems to be the one to get, better than the 706. Can anyone tell me if recently produced models have fixed any of the problems that require "mods" after you buy it? I am specifically talking about the fan problem and the microphone. I believe that Yaesu has fixed the fan, but want to hear from someone who has bought a new one very recently. As far as the microphone goes, it seems that in order to get good clear audio on it, it needs to be modified. Has Yaesu started to fix this in the factory? Thanks for any replies in advance.

If you buy one make sure it has the swr mod. Look for the newest lots you can find, verify this thru the serial number of the one the dealer plans to sell you. Most May 2001 runs have it and anything newer should too from what we can tell. The fan mod is easy enough to do your self. Tie a 29-50 ohm resistor from one of the fan ground wires to ground, this will idle the fans on vhf/uhf to protect the final by keeping fresh air running thru the little beast. This will still allow the original circuit to work as designed. I see by your Yahoo ID that your a UHF/VHF buff, make sure you do this mod!
The mic is not a problem, simply disassemble the mic making sure that you remove the pc board screws and the one thru the ptt switch, then gently pry out the mic element and remove the plastic baffle. Open the third hole with a needle and reassemble without the baffle being careful not to pinch any wires as you secure the board in there. Voila! Super audio on all bands... Good luck Richy N2ZD

# 14900. Re: Fan Mod

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-26 12:15:15 UTC
From: Raja Chatterjee
Topic: 10025  Message: 14900

Howdy Gents, mostly a lurker here....
2 items:
1.
I bought a new FT100D 2 months ago from HRO (May02). If the interior auto temp is high (after parking outside all day long), when I get in the truck and turn on the rig, the fans come on automatically. If it's cool and I just drive around talking on 2m, the fans spin when I transmit and, after a while, the fans turn on while I receive also. It's not too noticeable since the rig is mounted behind the back bench seat and the control head is mounted on the dash with a speaker there as well. I'll look up the serial number and post it in the next couple days. Anyway, it seems as if the fan mod has been done. I have never sent the rig in to Yaesu. If HRO did, they didn't tell me.

2.
I get this list in digest form.
It would be really nice if people didn't include a copy of the previous message when they reply. Including a specific line from a previous post is not unreasonable, but it's somewhat a waste of bandwidth to keep mailing copies of posts around when we all have access to the previous posts or can read the yahoo group as a thread.
Sorry, I'll get off my soapbox 8-) !

3.
I know, I said 2 things...
This list is great and I congratulate everyone on the wonderful technical discussions and problem solving, you've helped me quite a bit, and I didn't even need to ask a question!

From: ke2de
Topic: 14903  Message: 14903

Sorry for the typo..I received it on Monday June 24th. I too was surprised by the turn around time and corteous service and also they double bubble packed and it was placed in a plastic bag.

Tech# T44 made good comments on the sheet and I saw no mars or signs of frustration on the repair...I had requested also to align the main body with the sub metal body so the cover would be aligned in the corners and this was done also. I am sending a Thanky You to Yaesu Service so the tech #T44 gets full credit for his/her work.

That is in complete disagreement with what the Yaesu Japanese representatives were telling us at Dayton and what their signs said. They indicated that the 120 would be a faster, more robust antenna with a higher price and that they would keep selling the 100.

Perhaps Universal cannot support both products in their inventory?

I have only read one report about the MD-100 / FT-100 combo and they said that the audio level was very low. That mic is really not directly compatible with the FT-100(D) due to the low input impedance of the rig. You can do the mic mod on the stock FT-100(D) mic and get great results. The mod is described at http://www.mods.dk
I also posted some info there that directs you to a website that describes the design of a mic pre-amp/impedance converter that allows you to use higher Z mics successfully with the FT-100(D). I think I posted info about the impedance mismatch issue and the website address for that pre-amp design under the topic dealing with microphones at the http://www.mods.dk website
You'll find your way to it. Several of the mod discussions are followed by reader comments and I believe that's where I stuck the info about the mic pre-amp. There's also info there regarding how to set up the FT-100(D) for excellent AM operation. Funny thing about the pre-amp approach; I was very discouraged with the transmit audio reports I was getting with the stock hand mic. I had a D-104 and ordered the pre-amp PC board for about $7 but before it arrived I did the mic mod and the results were so good that I never pursued using the pre-amp. Good luck.

Thanks for the replies. From what I have read, Yaesu has already fixed the problem with the fan on VHF/UHF on newer models, but I wanted to confirm it with someone who has very recently bought one. I have two external fans that currently sit on my VHF amp to cool it, so I will just mount them to blow on the outside of the radio when needed... since I'm a tech, all of my operating is on VHF/UHF and much of what I do will probably be low power FM stuff on repeaters (most repeaters can be reached with 5 watts or less in my area) or SSB. I tend only to turn up the power when needed, as any good operator should :)

I bought mine earlier this year. It was produced in September of last year. The high SWR mod had been done, I assume at the factory. I did the mic mod and the fan mod myself. I highly recommend the fan mod, done the way I worked it out, solderless, and completely removable in the event of a need to send the rig toe Yaesu under warranty. By the wat, I used a 47 Ohm resistor, and the speed seems to be fine.

The mic mod is, also, a necessity, as far as I'm concerned.

I think at least a line of quotation is necessary because seeing a post
that just says "Yes!" or "Well said!" is confusing. Even in digest form,
it can come several messages after the original message.

I haven't had the mike mod done yet (only had the radio a week)and I have already been told I need to turn my mike gain down on UHF because of the wind noise (I don't have air conditioning). If I already have a problem making the mic mod will only make it worse. I don't think the mic mod is needed in all cases and should be seriously considered depending upon each operators situation. If I do the mod I guess I could decrease the mic gain that is still set at the factory setting.

# 14915. Re: Considering the FT-100D

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-26 17:32:55 UTC
From: backhoefade
Topic: 14898  Message: 14915

I haven't heard yet of a new FT-100D with proper fan operation on VHF/UHF. Note that the overheating problem occurs when you simply have a long period of receive-only operation on VHF/UHF. Although transmitting will add heat, I'm pointing out that the basic design problem is that the fans don't ever turn on, regardless of the rig's temperature, during receive operation (except for about ten seconds following a transmission). The quickest way to remedy this is to add the resistor as described in many posts at this website. The other approach is the Yaesu mod where they add a temperature sensitive switch to the rig. But that means you give up the rig for a few weeks. You can tell if you need the mod by heating up your rig by transmitting for a while on, say, 2 meters and then checking to see if the fans continue to run even after the basic 10 second post-transmit period. By the way, the rig draws gobs of current in transmit even if you have the power dialed way back. At least that's the case in AM, SSB and CW operation. The power consumption and consequential heat generation is only roughly proportional to the RF output power. There is a fairly high residual current drain "floor" regardless of output power level. Someone posted current drain versus output power but you would have to search for it. I'm not sure how the power consumption versus Pout function is for FM but I suspect it similarly draws a fair amount of current even if you dial the output power back to 5 Watts. Measure the current at low output power and tell me what you find. In any event, the real issue is that the rig will heat up a lot when it's just sitting there receiving, until you implement one of the fan mods.

From: backhoefade
Topic: 14884  Message: 14916

After you do the mic mod you will find that a setting of between 50 to 55 for SSB will be excellent; talking in a very slightly elevated voice about 4 inches from the mic. For AM operation set the mic gain at 17, no higher. For PROcessor operation hold in the PRO button long enough to get to the PRO level setting and set it also for 50 to 55 for SSB and 17 for AM. The PRO "compression level" setting is not a compression level control (despite what the User's Manual states); the degree of compression is a fixed level. You can't adjust it. The PRO level setting is simply a separate mic gain setting dedicated to "PROcessor on" operation. You can prove that to yourself by turning on the PRO, setting the PRO level to 55 (in SSB mode) and then going to the mic gain control and setting it all the way down to zero. You will see that the mic gain control is out of the picture when using the processor, and the PRO level control has over-ridden or replaced the mic gain control. I verified with an oscilloscope that the compression percentage does not vary at all when you vary the "comp level" setting. That just changes the mic gain, i.e. the audio drive level to the balanced modulator stage when the PROcessor is enabled. I think I calculated only about 14 dB of compression based on the envelopes I observed with the processor on versus off. It's not a lot of compression.

Last Friday, on a panicky scramble for Field Day supplies I went to HRO and they mentioned that the FT-100 sale they happened to have was ending at 5:30 pm (PST). They also mentioned the ATAS was on sale for a couple of more weeks. This led my friend and I to think that the FT-100 was being replaced (perhaps) by a new model and it would prob. go on an even bigger sale. It was on sale at 789 down from 823. I gotta save a lot of bucks these days but I would really like to replace my TS-430 (or 440, I forgot). Anyone heard anything?

I believe that according to yaesu, the current drain at 100w is around 23
amps.. dunno about the other power levels.

The problem is probably with Windows (eeech) or your connection to the
soundcard.

Make sure that you are connected to the line in & out jacks on your
soundcard & not the speaker or mic jacks.

Make sure that vox is off,

When the rig is on, do you hear any output thru your computer speakers?

I don't think that the FT100 is being discontinued anytime soon, the
reduction in price is probably an attempt to clear out inventory before
they get the FT897's in (whenever that might be)

I asked my local UK dealer if he could supply me with a new FT100D with the fan and SWR mods done by Yaesu rather than buy it, send it back for the mods, wait ages etc.

He called Yaesu UK and they said, yes we will do that if you wish. Seems to me its the only way to buy an FT100D, get it with the mods done and save all the hassle. The waiting time is not long, only a few days more than ordering one through the dealer without the mods done.

I know what I am going to do :)

Rdgs,

Pete

You're right, Chas. I did my own fan mod and my FT-100D has been running all day and it's as cool as it was when I turned it on.

Best advice is do the fan mod, do the mic mod, and wait and see on the swr mod.

It's OK if you don't do the mod. But I can almost guarantee you that if you do the mic mod, then set your mic gain around55, and have opened up the blocked hole in the mic, you will get great audio reports. Be sure to set your EQ for your voice. That also helps.

I haven't had the mike mod done yet (only had the radio a week)and I have already been told I need to turn my mike gain down on UHF because of the wind noise (I don't have air conditioning). If I already have a problem making the mic mod will only make it worse. I don't think the mic mod is needed in all cases and should be seriously considered depending upon each operators situation. If I do the mod I guess I could decrease the mic gain that is still set at the factory setting.

# 14927. Re: FT100D and Rascal PSKHow to get Power Out..Recieve OK

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-26 23:09:00 UTC
From: waltodc
Topic: 14902  Message: 14927

I have the same setup and it works fine. To set the power level go to function menu 28 (AFSK LEVEL) I have set my sound card to Line out to ensure that the output is constant. If you are using powered speakers a 'Y' adapter will allow you to use them and adjust the speaker volume externally and not disturb the Transmit settings. On my Compaq the AFSK Level is 10 with the HF TX PO (Menu 21 set to 30) this seems to be fine for PSK31 and the FT-100 doesn't run hot.. It is also a good idea to turn off all special effects on the sound card so as not to distort the audio out.

You will need to use an impedance transforming pre-amp if you try to use most other mics other than the original hand mic with the FT-100D due to the low input impedance of the rig. People have reported low level audio when using, for example, the MD-100 Yaesu desk mike.
Read about the problem at http://hometown.aol.com/ampmicro
I suggest you do the mic mod on the mobile mic; the results are outstanding.

You're right; but I think it's still something like 4 or 5 amps even when you throttle back the CW output to 5 Watts out.

Perfect solution. You're lucky the dealer will do that. Check the unit for the mods when you get it.
Good deal!
N6AF Chas

--- In FT100@y..., "pete_granger" <pete_granger@y...> wrote:\> I asked my local UK dealer if he could supply me with a new FT100D with the fan and SWR mods done by Yaesu rather than buy it, send it back for the mods, wait ages etc.
>
> He called Yaesu UK and they said, yes we will do that if you wish. Seems to me its the only way to buy an FT100D, get it with the mods done and save all the hassle. The waiting time is not long, only a few days more than ordering one through the dealer without the mods done.

# 14933. Re: [FT100] Are FT-100's being discontinued--going on sale?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-27 00:27:42 UTC
From: Ed Juge/NM
Topic: 14919  Message: 14933

All dealers have a $200 coupoon on the FT-100D. I think that runs through July. Last week, HRO also had a $50 "Field Day" coupon, for a total discount of $250. That coupon probably expired with FD. I asked the price on Monday, 6/17 and was offered $200 off. I waited and went back in the following morning and the FD coupon was in effect, so I bought one. I seriously doubt this means the 100 is being dropped.

Frankly, I'm quite happy with my 100D and could care less if something supercedes it. But then, my last two rigs didn't get traded off for 8-10 years. I change my underwear daily... the ham radios not nearly so often.

Hello,

I have a Rascal set prewired for FT100D and receives fine with
Digipan and Hamscope. When I fo to transmit it switches to transmit
but I see no paower out on my watt meter. Mode is USB and I tried
changing the windows audio out through the icon but just does not
shop any modulated carrier..or any power output...just goes into
transmit.

Is there a setting in the FT100D I have not set correctly or is it
something else.

Thanks,
Earl

From: w6ir
Topic: 14907  Message: 14938

Roger,

I have my FT100 mounted under the back seat. I removed the tray for the garage door opener in the overhead console and mounted a speaker in there, the MFJ speaker fits nicely. The head is mounted to the center console (oops, you probably can't put in any holes).
The ATAS is mounted on a license plate frame mount from Lakeview (the hamstick maker). I also have a RS730 (Diamond?) mount on the rear passenger door used mainly for the 2/440 antenna but it will hold the ATAS if need be.

My 96 has ignition noise but the noise blanker takes care of it quite nicely.

Good luck, happy mobiling

Hank

Earl,
I am using the same RASCAL. I purchased it as a kit.
This may sound like a simple question, but make sure you have the green plug plugged into the sound (speaker out) out on the sound card, and make sure the Volume, MIDI and Wave controls are not muted in the Playback settings of the volume control. I don't use the Digital mode on the FT-100D, I leave it set on USB and reduce the power to 50-60% for HF.
Also, you might want to check to make sure the RASCAL is wired correctly and their aren't any bad solder joints.
Mine worked the first time I hooked it up, except for having the ptt line switched on the plug. A quick check of the pin outs and soldering in the correct wire and all went well.
Good luck.

The K7HOG Field Day team was hosted by Marsh Johnson, KK7CW. The set up was 3a high power with all hf bands in use, as well as a novice station.
I operated at the 20 meter ssb and cw position, as well as the 75 meter ssb position. Conditions were pretty good, with ability to hold a frequency even on 20 ssb with about 350 - 400 watts to a TA 33 JR at 45 feet or so.
Total efforts netted us approximately 1600 QSO's total, with the majority on 20 and 75 ssb.
The operators were Larry, AA0BY, John, K7FD, Harlan, N7HN, Jack, K7QH, Marsh, KK7CW, Chuck, KK7KU, and other operators. There were approxiamtely 35 operators who showed up.
How did everyone else do?

From: N1QXV
Topic: 14944  Message: 14944

No price on it yet either.

No big deal, they say it tunes faster, well my 100 is fast now.

They got rid of the boot and went with a seal plastic unit to keep water and dirt out.

Not worth their big price and the base is still lame with the roll pin lock.

# 14945. Re: ft-100 installation - grand cherokee

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-26 20:04:54 UTC
From: morganquityesterday
Topic: 14907  Message: 14945

Roger,

I put my FT-100D/ATAS-100 into my '99 Cherokee Classic. It is not a Grand, but maybe some of this applies.

The FT-100D is separated, the electronic box is in the cargo hold. On the right (passenger) side of the cargo compartment there is a sunken area in the plastic wall. I put the flat mounting plate of the quick-release bracket in there and snap the radio (with the two side pieces of the bracket on the radio, of course) onto the mounting plate, with the fans pointing UP. Being in the dished out area, the electronic box is completely out of harm's way. Most of the cables are stuffed under the plastic materal along the top of the wheel well.

Power for the radio comes directly from the battery. The power cables come into the cabin through a large rubber or plastic boot used to get wires and other cables into the cabin from the engine compartment. If you look under the dash on the driver's side (use plenty of light, it is dark under there and the thing is black), you will see the taped wires coming through this boot. Somewhere close to the large central hole you should find two or more small flat circular areas, as if they were made for passing after-market cables. I used an awl to punch around the circumference of one of these areas and then used a pair of very small diagonal cutters to cut out the circular area. The power cables will be a tight fit through that hole, but that's what you want.

The control head is mounted on a RAM-Mount flexible arm which is mounted to the center console. The flex-arm allows the radio equipment to be twisted back behind the passenger seat when not in use, i.e., when the wife is riding as a passenger. Cables from the separation kit for the control head and the microphone cable can be tie-wrapped to the flex-arm (you might want to use the velcro-style tie wraps and the plastic ones can be kind of sharp).

The ATAS-100 is mounted to the right (passenger) side of the liftgate using a Maldol heavy duty trunk lip mount. On my Cherokee, the liftgate is metal and, contrary to what many posters here say, I have had to use minimal extra gounding to get the antenna to work. It tunes well on all bands. The short piece of thin coax that came with the SO-239 socket is all that is needed because the radio is mounted right at the antenna.

This requires a bit of work, but I think it produces a workable installation. I cruise to and from work with the radio on the flex-arm just above the console. My right elbow rests on the console and

I operate the radio with very little interference to driving. By the way, be sure you set the band edge memories for your favorite bands. I can tune the radio without taking my eyes off the road; when the VFO gets to the top end of the 'phone band, it just wraps around to the low end and keeps going!

Good luck,

Turner - WA4MQY

I use the Nomic
RigBlaster and I turn on the VOX mode on the FT100D
while in the USB mode. I plug an adaptor cable into
the Mic from the Nomic to get the audio into the
FT-100d. There is a mic gain pot that sets the audio
drive from the computer into the Mic input of the
FT100d.

I have no specific
info on the Rascal setup but hope this helps.

I've been using the FT100 as long as most people in the forum and have never had a bad audio report. However, there are those that have reported that the audio on their rigs improved dramatically when they did the 'mic mod'. For those of you just tuning it, the mic mod depends on opening another hole in the mic and removing a baffle in the microphone housing.

The thing that most intrigues me about the mic mod is that the people who do it cannot possibly know the result of a 'before and after' test unless they've recorded it and not a single proponent of the mod has ever shared a 'before and after' audio clip with other list members. If anyone has one, I'd be 'all ears.'

As Bob Pease is fond of reminding his young engineers, whenever you tell me a circuit is 'acting funny' you should record the 'amount of funny.' This is basically a request for analytical data to support the conclusions one might draw from an experiment. I have yet to see a spectrum analysis of the purported improvement to the audio with a before and after analysis of the mic mod.

Now I realize that this message is likely to make a few people who are supporters of the 'mic mod' hopping mad. There's no need to get mad, I'm just requesting some analytical data to support the benefit of a mic mod. If anyone provides it, I'd be happy to post it to the FAQ.

I am curious as to why Yaesu added extra baffle to the mic. They had to go through the trouble of tooling up this part and adding it to the mic at great expense. Was it to reduce the 'Darth Vader' effect for those who breathe into the mic? Was it to reduce the effect of wind noise? If so, what happens to breath and wind noise after the baffle is removed? Also, if you're going to drill an extra hole, why not just drill a 1/4" hole so you have full access to the mic element? What purpose do the holes serve and why was one of

them blocked?

I'm asking the same questions I ask engineers when they come to me and say that they need to make a design change. That question is, "What data do you have to support this conclusion?" Without data, all you have is an opinion.

From: Dick Thompson
Topic: 14940  Message: 14949

The mic mod is so simple and takes about 15 minutes. Plus, the price is $0. A base mic will cost you $$$ and probably won't sound as good as the mod.

Topic: 14920  Message: 14950

Mad? You actually think those of us who made the mod will be hopping mad at you? That's rediculous, Lee. But the next time I drive up to Denver I'm gonna have to kill you. Mind you, I'm NOT mad. ROFL!!!!!!!

All kidding aside, what you said makes sense. But I made the mod and I don't have before and after recordings, but people I have known for many years on the air and in person, said that there was a noticeable difference. A couple of them asked me if I had a new mic and they had no idea I had made a mod to the mobile mic that came with the 100D. Go figure.

> With all this talk about the microphone problem,
> you'd think Yaesu would fix
> it!

I've been using the FT100 as long as most people in the forum and have never had a bad audio report. However, there are those that have reported that the audio on their rigs improved dramatically when they did the 'mic mod'. For those of you just tuning it, the mic mod depends on opening another hole in the mic and removing a baffle in the microphone housing.

The thing that most intrigues me about the mic mod is that the people who do it cannot possibly know the result of a 'before and after' test unless they've recorded it and not a single proponent of the mod has ever shared a 'before and after' audio clip with other list members. If anyone has one, I'd be 'all ears.'

As Bob Pease is fond of reminding his young engineers, whenever you tell me a circuit is 'acting funny' you should record the 'amount of funny.' This is basically a request for analytical data to support the conclusions one might draw from an experiment. I have yet to see a spectrum analysis of the purported improvement to the audio with a before and after

analysis of the mic mod.

Now I realize that this message is likely to make a few people who are supporters of the 'mic mod' hopping mad. There's no need to get mad, I'm just requesting some analytical data to support the benefit of a mic mod. If anyone provides it, I'd be happy to post it to the FAQ.

I am curious as to why Yaesu added extra baffle to the mic. They had to go through the trouble of tooling up this part and adding it to the mic at great expense. Was it to reduce the 'Darth Vader' effect for those who breathe into the mic? Was it to reduce the effect of wind noise? If so, what happens to breath and wind noise after the baffle is removed? Also, if you're going to drill an extra hole, why not just drill a 1/4" hole so you have full access to the mic element? What purpose do the holes serve and why was one of them blocked?

I'm asking the same questions I ask engineers when they come to me and say that they need to make a design change. That question is, "What data do you have to support this conclusion?" Without data, all you have is an opinion.

Remember that it takes so many amps to run the lights,preamps, receiver,so on, so on, so you have to add this to the amount of trans current on most rigs.

I don't have any statistical data to back up this claim, just personal experience. I have been running the FT-100 since they were first released, and I never received an unsolicited "great audio" report with the stock mike. A few months ago, I did the mod, and since then I get one or two "great audio" comments every day. That's enough "proof" for me...

I am sure that most of those who do this mod do on the air tests with other
stations, listening and giving their opinions on the quality of the audio.
They probably go from being told they are muffled to being told they are loud
and clear...

Ok, a lot of you have told me you use the Heil HM10 mike with the FT-100D. After looking it up, I see they sell it with the HC4 and/or the HC5. Which should I get? Also, I've found a reference to needing a "CC-1 Connecting Cable"? What's that? Is there some special adapter I need to use it with the FT-100D?

This may be of interest to those of you who want to save some money.

I was going to buy a Heil mic for both my 100D and my Icom 746. In talking to the salesman at HRO (who has become a friend) he told me on the sly that he has gotten reports every bit as good as the Heils, but with much less expensive studio mics. So I went out and bought every one I could get my hands on (knowing, of course, that I could return the ones I didn't want.)

Lo and behold, I ended up with an Audio Technica ATR-20 desk mic (around 20 bucks at Best Buy). None of the others I tried (Radio Shack, Sony) worked well at all. But the Audio Technic sounds great.

I put it on a Radio Shack desk stand (about 6 bucks.) I wired a PTT switch into a plastic box along with a mic mini plug and connected the whole thing to the rig with the appropriate plug. The setup works great. I get consistently good audio reports from all over. When using it with the 746 I have to set the mic compression up fairly high, but it works fine. When I get around to it, I'll build a pre-amp/equalizer for it. But it doesn't seem to be necessary at the moment.

Total cost, about $30, an an hour of my time. Well worth it, as far as I'm concerned. I recommend you give it a try. You can always return the mic within 30 days if you aren't satisfied, and it will all cost you considerably less than the other options.

73,

Mike
W6MDK

Andy, I'm not sure of which cartridge you should order for the Heil mic. But I think the cable you mentioned is a cable that has a standard mic connection on one end (8 pin, screw on type) that you can screw the mic onto. The other end of the cable probably has the RJ45 end that mates with the FT-100D. If I'm wrong I'm sure I'll hear about it. :)

# 14962. Re: Another question about Heil mike's

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-27 15:10:10 UTC
From: ki5mp
Topic: 14957  Message: 14962

As you've noted, most of the available mics from Heil don't have PTT switches (with the exception of the Goldline). With his "universal cabling system", a standard 1/4" jack is wired across the appropriate pins for each type of mic plug, allowing the user to incorporate either a hand-held PTT switch or foot switch to key the mic manually. Or, as someone else mentioned, you can use VOX to key the rig.

Good luck,

Mike KI5MP

Frankly I think it's ridiculous that they're still shipping the FT100
when they know it needs serious mods in order to work according to
specs.

# 14965. Pre-modded mic?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-27 15:40:15 UTC
From: Frank van Wensveen
Topic: 14965  Message: 14965

I tried to do the mic mod last week but much to my amazement I
couldn't find the three small holes (one of which is blocked) that are
supposed to be in the mic element. After removing the mic element I
find it's covered by a rubber grommet with a 3mm hole in the center.
Underneath is the mic element that is covered by a sort of textile.
And I've never had complaints about my audio either.

Are there different types of FT100 microphones around?

73,

Frank PA3GMP

Frank...

The three holes are *NOT* in the mic element, they're in the microphone housing. Looking at the front of the mic, you see three. Looking at them from the inside, only two go through. After removing the mic element from the housing, there should be a "baffle" in the hole where the mic was. Turn the housing upside down and tap it on your table. The baffle should fall out.

It's hard to argue with success. I am going to be running some experiments over the next few days. I took the mic from my wife's FT90 which is an MH36 and tried it out on the FT100. It looks pretty much identical to the MH36B (the standard FT100 USA mic) inside, except for a diode that looks to be a factory mod on the ground wire of the microphone element. I don't believe the diode has any effect on the dynamics of the audio, it's probably just there for DC reverse polarity protection. I have an FT1500 and even though its MH48 mic looks identical to the mics on the FT100 and FT90, it has a different pinout and doesn't have the IC inside to generate the DTFM tones. I reported on this in message 13199.

I tested the MH36 mic by setting up a recorder in the house and went out to the car and confirmed that the recordings sounded same as with the MH36B mic. Then I removed the baffle. The audio sounded a little brighter (that's "punchier" in ham parlance) but I haven't got a punch meter handy so I'll be swapping mics for the next few days and see how much better the audio reports are without the baffle. Ideally, I'd like to run an audio frequency sweep to see what kind of differences I can see in the spectrum. I know there's also the opening of the blind hole mod, but I'm not sure of its relative contribution to the improvement and I'm reluctant to try it since it can't as easily be undone. Maybe that will be the next step.

Incidentally, the recorder tests I performed showed me that the standard FT100 audio doesn't sound bad, as some have reported. I've read reports that some people can tell an FT100 mic on the air because it 'sounds like an FT100', whatever that means.

Do those of you who have done the mod notice an
improvement on all the audio modes (AM, FM, and SSB)
or does it only improve audio performance on one or
two of them?

# 14968. RE: [FT100] Heil mike with FT-100D

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-27 16:28:08 UTC
From: Denny AD6EZ
Topic: 14956  Message: 14968

Hi Andy -

I recently bought a Pro-5-4. It has a 1/4" plug for the audio (single earphone) and an 1/8" plug for the Mic. I had to buy the FT-100D adapter model AD-100 that connects to your FT-100(D) then I needed the adapter AD-1-Y connected in between the Pro-5-4 and the AD-100. Looking at the HM-10 you probably need the CC-1 and the AD-100. If you order from AES or HRO - they can advise you. It looks like the HM-10 has a PTT button like the Goldline.

The choice of the HC-4 or HC-5 is personal one. I chose the HC-4 for a clearer sound and less fidelity (full range sound) and I get great! Audio reports!!!

Hope this helps you out.

Ok, a lot of you have told me you use the Heil HM10 mike with the FT-100D.
After looking it up, I see they sell it with the HC4 and/or the HC5. Which
should I get? Also, I've found a reference to needing a "CC-1 Connecting

Cable"? What's that? Is there some special adapter I need to use it with the
FT-100D?

# 14969. Re: Best base mike for FT100D?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-27 17:27:53 UTC
From: backhoefade
Topic: 14940  Message: 14969

Actually you have things turned around a bit. To make a base mic work, or for that matter, just about any mic other than the stock mic, you have to use an impedance transforming pre-amp since the FT-100(D) input Z is relatively low. You can read about it at http://hometown.aol.com/ampmicro
I started to go that route but then I tried the mic mod and the results were so good that I dropped the idea of "pre-amping" my D-104 and just stayed with the hand mic. What's great is that now you have an excellent mic for both base and mobile operation.
There's more info a http://www.mods.dk but the impedance mis-match issue is discussed at the "hometown.aol" site.
The mic mod is a little tedious - mainly you just have to be careful not to wreck the tiny electret mic element. Follow the instructions at mods.dk and the next message you will post here will be "wow, my transmit audio reports are excellent". Good luck!

My transmit audio reports improved on both AM and SSB. I have had comments on SSB such as "You're using an FT-100D ?!".
On AM (40 meters) I have been told I sound as good as some of the old boat anchor operators. So I have qualitative proof of the improvement on both AM and SSB.
On FM it seems I always received good audio reports even before doing the mod. And I've always received good reports with the mod on FM. I don't work very much FM so I don't have the qualitative 'database' I do with SSB/AM, but I'm sure a similar improvement occurred there too.
I am certain that if someone swept the audio response (assuming that the generator's output was properly leveled) that you would see the high freq roll-off greatly relieved with the modification done. You could sweep the audio generator frequency with a leveled source (speaker) in front of the mic and observe the tone amplitude at the final output of the transmitter as a function of frequency, with and without the mod. I suspect there may be another effect from that baffle other than just frequency response; something related to a resonance effect in the mic cavity when the baffle is present; akin to talking into a mailing tube, but I'm not sure.

Can you imagine if one of the Yaesu Tech's ever came clean with this group and posted everything he knew about the fan, the spurious, the transmit audio, etc. That would be one interesting posting.

Why Yaesu ever put that baffle in there just, well, it baffles me!

I'm looking for a way to easily remove my -100 from its mounting bracket in my car for use elsewhere. I'm using the stock screws right now but I wondered if anyone has had any luck with other arrangements - I was thinking of something like screws with the same thread/depth with thumb-wheels or something to make them easier to remove.

Any ideas?

Thanks es 73!

I use the Yaesu quick release bracket MMB-67. It is a small flat base and two "ears" that stay attached to the rig. A quicg tug, and the FT-100 just slides out of the base plate. The mount is inexpensive (around $30 if I remember correctly). I bought several of them - one for my regular vehicle, one for a shelf in my shack in the event I need to run the FT-100 in the house, and another for a "spare"...

Go to a Truck Stop/CB shop. Look for replacement thumbscrews. They are 4mm diameter.

Then find 6mm nuts. Screw them all the way onto the thumbscrews as permanent washers, because the thumbscrews cannot be longer than 6mm length. Or, grind off some length to make a 4mmX6mm long thumbscrew. The nut you put on before allows you to rip off the burrs produced when you remove it.

I did this from my local Electronics Emporium http://www.tandmelectronics.com and I got about 8: 4 for my FT-90 and 4 for my FT-100

Now if we can just solve that darn remote-head-cable-connector dilemma

# 14977. Mic Gain vs. Compression Level, settings for best SSB audio, etc.

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-27 20:29:01 UTC
From: Ed Juge/NM
Topic: 14977  Message: 14977

Did I miss something in the manual? It appears to me the FT-100's mic gain and compression level settings don't work like those in the rest of the world. It looks like both of them are microphone gain controls... one that works when the processor is on and one works when it is off.

With the processor on, my "mic gain" control has absolutely no effect (whether set at 0 or 100), and the "Compression Level" control will run the mic gain from zero to distortion and beyond. With the processor off, the compression level has no effect (0 to 100) and the mic gain will control the audio level.

Very interesting and probably more practical than a mic gain control that's always active and can need touching up when you turn the processor on or off.

Further information from our testing...

In listening to my own signal and having a friend listen from a distance, both of us also noted that turning the processor ON makes the audio noticeably brighter, with fewer lows. That's 180 degrees away from the way most processors work. BTW, this is all AFTER the microphone modifications.

We also checked the TX carrier settings (menus 64 and 65). On USB --15 meters-- my friend reported a setting of -200 resulted in noticeably improved audio quality with my voice. For some unknown reason, when we switched to LSB --still on 15 meters-- the TX LSB Carrier setting made no difference. Maybe we should have tried it on a band where LSB is the normal mode.

Anyway, the above is offered for whatever use it might be for other FT-100D owners.

Maybe you read one of my earlier discussions about the processor in the FT-100(D). The compression percentage is a fixed level. You can't adjust the degree of compression. The User's Manual is inaccurate in a couple places where it states that you can adjust the compression amount.
Fact is, the level setting "within" the PRO button is simply a separate mic gain setting which overrides the normal mic gain setting anytime you have the PROcessor enabled. You can prove this by enabling the PROcessor and then turning the regular mic gain setting down to zero. It has no effect whatsoever when the PRO is on.
As far as actual practical settings, given that you have done the mic modification, I found that a setting between 50 and 55 is good for SSB. If you turn on the processor, same thing, except you set the level "within" the PRO function (I think it's called Comp Lev or similar) to 50 to 55 in SSB. For AM operation you set the mic gain to 17, or if you use the processor, you set the level within the PRO function to 17 as well. That's all there is to it.
I find it a bit discouraging that the Manual is completely wrong in its description of the compression level control. Maybe the design engineers' original intent was to make that control a compression setting and the Tech Publications department wrote it up like that. But in the final release the compression percentage is unchangeable. I verified that by viewing the approximate peak to average power ratio in the envelope of the transmit signal with the PRO on and off. I think it was about 14% or so compression. And when I varied the "compression level" setting there was absolutely no change in the compression percentage; only a change in the overall output power (peak and average), just as it changes when you vary the "mic gain" when the PROcessor is disabled. This is just one more quirk that we bump into along the learning curve with the FT-100D. There is some info regarding AM operation at http://www.mods.dk

Topic: 14977  Message: 14979

Thanks for verifying what I thought I had found, Charles. That is strange, compared to the way other radios work, but okay as long as I know what I'm working with. We found the mic gain and compression settings worked best just about where you did.

No, sorry, I didn't read your earlier message... I'm a newby on this reflector... just a few days now.

Cheers... Ed, W5EJ

PS -- there has to be a story behind your "alias"!

# 14980. FT100 birdies and warranty

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-27 22:54:28 UTC
From: Peter van Daalen
Topic: 14980  Message: 14980

Hi all.

The day after tomorrow my FT100 warranty ends. ( I use the set only the last 2 months... ).
Tomorrow I will ask for the fan and swr mod ( though no problems with such as so far... ).

However, how many birdies and how strong are " normal " ?
( Once I used a 20K Rohde & Schwarz receiver and even that one had some.....though very few and not loud ).

But, my FT100 has over 200 birdies ( between 1.8 and 144 Mhz. Above 2 meter I stopped counting.)
The S is between 0 and 2 ( most of them ), part of them are S3-5 and over 20 birdies are horribly loud i.e. >S6 and a few even cross the S9 border..... ).
I love this little box and I am very forgiving for its ( many ) imperfections but yet I presume these birdies are not regular.

So, what birdies ( how many and how loud ) are " normal " in our FT100 ?
What can I complaint about and require warranty repair of ?
Sorry for " high prority " of this posting but tomorrow .. etc... see above :-)

Thanks for any help.

Peter, PE1ECM

Sounds like you've got a full aviary there. I suggest you point this out to Yaesu when you send it in for the other mods and tell Yaesu to "get the flock outta there"!

I'm looking for a way to easily remove my -100 from its mounting bracket in my car for use elsewhere. I'm using the stock screws right now but I wondered if anyone has had any luck with other arrangements - I was thinking of something like screws with the same thread/depth with thumb-wheels or something to make them easier to remove.

Any ideas?

Thanks es 73!

# 14986. tuning knob/rotary encoder breaking

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-28 04:13:53 UTC
From: kc7gsg
Topic: 14986  Message: 14986

Anyone had the rotary encoder loosen up or break? (The rotary encoder is the mechanism behing the large tuning knob, I didn't know the name of it until I needed one!) I dropped my control head and broke my original one. Yaesu was pretty quick about getting me a new one. Problem is that it only lasted about 2 months. I have the head remote mounted on the dashboard of my service van. I think the weight of the knob and the vibration of the van is wearing out the rotary encoder prematurely. Yaesu is sending a replacement under warranty, that's cool. I'm thinking of drilling some mass out of the tuning knob to lessen the stress on the encoder. It's a solid piece of brass. Anybody have any other ideas? I would appreciate it.

Thanks,

Sean

"Backhoe fade" is a term used to describe a failure in a buried
telecom line, generally optical fiber. It really happens from time
to time. The tractor, after a few bites, cuts the cable. The "fade"
part of the term comes from microwave radio parlance, referring to
periods when the recieve signal drops below its nominal unfaded level
for any of a number of reasons, generally refractive or reflective
selective fading effects below about 13 GHz and rain attenuation at
higher freqs.

Go to a Truck Stop/CB shop. Look for replacement thumbscrews. They are 4mm diameter.

Then find 6mm nuts. Screw them all the way onto the thumbscrews as permanent washers, because the thumbscrews cannot be longer than 6mm length. Or, grind off some length to make a 4mmX6mm long thumbscrew. The nut you put on before allows you to rip off the burrs produced when you remove it.

I did this from my local Electronics Emporium http://www.tandmelectronics.com and I got about 8: 4 for my FT-90 and 4 for my FT-100

Now if we can just solve that darn remote-head-cable-connector dilemma

Thanks

From: Dick Thompson
Topic: 14972  Message: 14990

Any dealer can get one for you. HRO has them, as does AES and many of the others. A little more expensive than thumb screws (about $24 if I recall). You just put a couple of small "wings" in the 100D, then put the base in your vehicle. The radio just slips in and clicks in place. A little jerk to remove it and it's out. I use the quick release all the time and leave the little things that attach to the rig in place. They are almost invisible.

Like I said, it sure would beat the hassle of messing with thumb screws. But then, I'm basically lazy. :)

bracket in my car for use elsewhere. I'm using the stock screws
right now but I wondered if anyone has had any luck with other

arrangements - I was thinking of something like screws with the same thread/depth with thumb-wheels or something to make them easier to remove.

Any ideas?

Thanks es 73!

# 14992. RE: [FT100] Thumbwheels for mounting?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-28 07:17:47 UTC
From: Eric van de Weyer
Topic: 14972  Message: 14992

Hi Brian,

I had some wing nuts of the correct thread (M4) into which I screwed some M4 bolts from the wrong side. I screwed them down hard so that the heads locked into the wings. I then cut off the bolts so that they ended up the same length as the originals. They make the perfect wing bolts.

# 14993. Thumbwheels for mounting?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-28 12:13:47 UTC
From: Pres Waterman
Topic: 14972  Message: 14993

Eh. Replace the phrase "6mm nuts" with "4mm nuts" to fit the 4mm thumbscrews as washers to LIMIT the thread depth to 6mm!

Go to a Truck Stop/CB shop. Look for replacement thumbscrews. They are 4mm diameter.

Then find 6mm nuts. Screw them all the way onto the thumbscrews as permanent washers, because the thumbscrews cannot be longer than 6mm length.

Thanks

Hi all FM´s!

I orderd the Heil Pro Set with the HC5 mic element.
I can only say that I get 5++++ reports on my audio...
So the HC5 element seems to be working GREAT on the FT100....

So my advise is go and get a Heil Microphone, wheater desk mike or
headset both work perfect on this little baby... :-)))

# 15001. ACS = Automatic Code Screw-Up

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-29 12:08:42 UTC
From: ke9v
Topic: 15001  Message: 15001

Been enjoying the FT-100D on phone, but I really enjoy using CW.

Every attempt to use the new rig on CW has caused me to cuss the goofy keyer. Last night I was ready to chuck the rig into the backyard. The keyer just seemed determined to make my sending sound awful. Fiddling with dot and dash spacing was getting me nowhere.

So I did some digging in the manual and noticed the keyer setting (menu #46) was on EL2.

The manual says this is the "Automatic Character Spacing" feature and it is enabled by default.

Aha! That was the problem I was having ... I would be merrily sending when for no apparent reason the character spacing would goof up one or two letters in a word, which would totally screw me up.

Disabling this "feature" by setting menu #46 to EL1 took care of the problem. I actually enjoyed a long, late evening on CW last night with my FT-100D!

I realize that this was simply a case of "operator error" on my part, but for the life of me I can't imagine how ACS could be considered a "feature". More like a serious liability if you ask me...

Just thought I would pass this along in case there are other 100D newbies like me who are convinced that this rig won't work on CW with the internal keyer.

73, Jeff

Dick you said that the connector is a RJ45. Look real
close I think you have a RJ12 a 6pin connector? I
double checked mine and it's a 6 pin, so unless Yaesu
has switched connectors don't make that mistake.

Hi

Another advantage for the Heil mics (except for the ICOM specific models) is that all you need to change to use the mic on a dfferent rig, is change the adapter. I use my MH10 and BM10 on my FT100 and FT847.

# 15005. Mike Mod - YAT

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-29 17:24:18 UTC
From: ke9v
Topic: 15005  Message: 15005

YAT = Yet Another Testimonial

I duly reported here a few nights ago that I had made the recommended modification to the hand microphone.

I worked a mobile station this morning (K0PP/6) and when I told him that I was using an FT-100D his next question was, "what microphone are you using?" He nearly didn't believe me when I told him I was using the stock microphone.

He offered that he had worked a "lot of FT-100Ds" and mine had the "best audio he had ever heard".

I realize it's only circumstancial evidence, but it's good enough for me! :-)

Jeff, KE9V

# 15007. Power levels on 144.100

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-29 21:37:14 UTC
From: n2lbt
Topic: 15007  Message: 15007

I'm cosidering purchasing a FT100D, the current cupon deal seems to be a great. I've been meaning to replace the IF rig on my mobile microwave station, and get a mobile HFrig out of it. I'm currently set up for 30db drive on all bands. Could someone tell me the approximate power levels for the FT100? If anyone is running it at the 1 watt level, is it stable there?

Dennis, N2LBT/VE2/R

Hello folks, I've had an FT100 for a couple years and its been trouble free, now I'm worried I haven't been using it right.
Anyway the real message I have is, a FT100D for sale, this radio is part of an estate, I programed and installed the radio for WG7GSG, he is a silent key now. He never used it more than a couple times before he died. There is also the infamous antenna available also. Anyone who has a desire can E mail at above address.

# 15009. CD with information and demo programs to help you with your FT-100(D)

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-30 05:21:47 UTC
From: Ham_Tech@juno.com
Topic: 15009  Message: 15009

Hi ladies and gents,

This is my second time back on this group. Name here is Daniel.

I would like to offer those on this group, a CD (700MB), filled with lots of weblinks, FREE demo logging/PC-rig control programs from the internet, and lots of information on how you can better use your FT-100(D). Even with the mods that are available on K0LEE's website, (granted I have his permission), and maybe the manuals/schematics. This will allow those away from the internet and home/office to use this on their PCs. Granted I know that not all of you have laptops.

If you as a member of this group are interested in this, please email me direct. I will try to find out how much money it will cost for me to send you the CD via Priority Mail, whichever is the cheapest, but most protective of the CD. Then I will send you the CD as soon as I have the Money Order or Check from you.

Along with the email you send me direct, please include weblinks, links to some of your favorite photos, and anything you would like to have on the CD. This will allow me to access these items from home on the internet. I will also add some of my own favorites.

Email direct to: ham_tech@...

Daniel

I am a firm believer in the mic mod, as well as the fan mod. In fact, I'm poud to have developed the "solderless fan mod" technique.

Keep it up, Richy.

By hte way, I think your e-mail audio is great.

# 15020. Re: Trunk mounting an FT100D Split... Best way?

Yahoo group: FT100 (2002-01 — 2002-06)
Date: 2002-06-30 21:03:47 UTC
From: Tim
Topic: 15020  Message: 15020

I admit I tried to live with the radio in
a box, up front in the passenger foot
well area, but for various reasons
(I'm married) too lengthy to mention,
this will not work.

I'm installing the splitter kit. The rear
part will be installed on the back of
my passenger-side rear seat. This
way I can simply unlock, and lower
the seatback to access the radio from
the passenger compartment, without
opening the trunk. All wiring, and
grounding will come up in the trunk,
and will be attached to the radio with
enough slack to allow the seat to swing
down.

My questions are twofold:

Generally, are there any specific issues
to be addressed for trunk mounting, such
as an extra fan for heat considerations,
or mechanical protection from cargo, or
luggage movement?

Specifically, since the radio is to be mounted
vertically when the seatback is up, which side
should be up? The back with the fans, or the
front with the faceplate mounts?

Also any suggestion about vibration, dust issues,
other than watching the intake vents (mentioned
in this netgroup) for clogged screens would be
welcomed.

Hi Tim
I have my FT100 mounted in my boot(trunk to you guys across the pond!!).
I have mounted the rig as close to the floor as posible with the fan side up, with regards to mechanical protection it all depends on what you carry eg:- steel boxes that slide WILL damage your rig...the weekly shop probably not so much!!. Extra fans? have you done the fan mod? if not DO IT it will keep your rig cooler.
Have fun running those cables and good dx
